Minutes of Board of Studies Committee Meeting held on Dated 03.06.2017

The Board of Studies Committee Meeting was held in the Board Room at 2:30 PM. on **03.06.2017**,  
Following members were present.

1. Mrs. Priyanka Jhavar , Associate Prof. (Mechanical Engineering) Chairman
2. Dr. G.R.Selokar, Professor (Mechanical), Member
3. Mr. Sanjay Kalraiya, Professor (Mechanical Engineering), Member
4. Mr. Anil Verma, Assistant Professor (Mechanical Engineering), Member
5. Mr. Dhananjay Yadav , Assistant Professor (Mechanical Engineering), Member
6. Mr. Sachin Baraskar, Assistant Professor (Mechanical Engineering), Member

The Chairman of Board of Studies Committee welcomes and appreciated the efforts put up by the faculty for progress of the department activities. The following Agenda point were discussed and resolved

## **Agenda Preparation of Syllabus and Scheme for V and VI SEM CBCS.**

### Discussion Scheme

Scheme and syllabus was put up before the member as per recent CBCS guideline, It was discussed in detail by the member and some modification were suggested.

### **Resolution of the Discussion**

It is resolved that scheme and syllabus as proposed with some modification and may be accepted

  
Registrar

Sri Satya Sai University of Technology  
& Medical Sciences Sehore (M.P)

The chairman thanks the member for peaceful conduction of meeting.

**Signature of All members (Including Chairman)**

1. Mrs. Priyanka Jhavar , Associate Prof. (Mechanical Engineering) Chairman 

2. Dr. G.R.Selokar, Professor (Mechanical), Member 

3. Mr. Sanjay Kalraiya, Professor (Mechanical Engineering), Member 

4. Mr. Anil Verma, Assistant Professor (Mechanical Engineering), Member , 

5. Mr. Dhananjay Yadav , Assistant Professor (Mechanical Engineering), Member 

6. Mr. Sachin Baraskar, Assistant Professor (Mechanical Engineering), Member

## MEC-601 NC and CNC Machine tools

### UNIT - I :

**Introduction:** Fundamentals of numerical control, advantages limitations of N.C systems - classification of N.C systems. **Computer Numerical Control:** Nomenclature, types and features of CNC machine tools, machine control unit, position control and its significance, engineering analysis of NC positioning systems, open loop and closed loop systems, precision in NC positioning systems-control resolution, accuracy and repeatability. Actuators: servomotors, stepper motors, transducers and feedback elements.

### UNIT - II

**Features of N.C. Machine tools:** Design consideration of N.C machine tools - increasing productivity with N.C machines, tooling for CNC machine. **System Device:** Feed back system-counting devices digital analog converters. **Interpolations:** DDA integrators, simple and symmetrical DD reference word CNC interpolators.

### UNIT - III

**Part Programming:** Process planning and flow chart for part programming, systems nomenclature and tool geometries, Tool presetting & modular tooling. Selection of tools based on machining capacity, accuracy and surface finish, elements of programming for turning and milling, part programming. Preparatory codes G, miscellaneous functions M, Interpolation, tool compensations, cycles for simplifying programming, typical part programming **Control Loops for N C Systems:** Introduction-control loops for point and counting systems.

### UNIT - IV

**Computerized Numerical Control:** CNC concepts-advantage of CNC reference planes, sampled data techniques, microcomputers in CNC. **Adaptive Control Systems:** Adaptive control with optimization and constraints-variable gains AC systems.

### UNIT - V

**Modern CNC machines:** CNC lathes, turning centers, machining centres, automatic pallet changers, automatic tool changers, direct numerical control and applications, CNC machine design features.

### REFERENCE BOOKS:-

## MEC-602 IC Engines

### UNIT I

Internal Combustion Engine: S.I. and C.I. engines of two and four stroke cycles, real cycle analysis of SI and CI engines, determination of engine dimensions, speed, fuel consumption, output, mean effective pressure, efficiency, factors effecting volumetric efficiency, heat balance, performance characteristics of SI and CI engines, cylinder arrangement, firing order, power balance for multi-cylinder engines, valve timing.

### UNIT 2

Combustion in SI engines: Flame development and propagation, ignition lag, effect of air density, temperature, engine speed, turbulence and ignition timings, physical and chemical aspects of detonation, effect of engine and fuel variables on knocking tendency, knock rating of volatile fuels, octane number, H.U.C.R., action of dopes, pre-ignition, its causes and remedy, salient features of various type combustion chambers, valve timing and firing order.

### UNIT 3

Combustion in C.I. Engines: Times base indicator diagrams and their study, various stages of combustion, delay period, diesel knock, octane number, knock inhibitors, salient features of various types of combustion chambers, fuel, ignition, cooling, exhaust and lubrication systems; Simple problems on fuel injection, various types of engines, their classification and salient features. Rotary I. C. engines, their principles of working.

### UNIT 4

**I.C. Engine System:** Fuels, ignition systems, cooling, exhaust/scavenging and lubrication system. Fuel metering in SI engine: Fuel injection in SI engine (MPFI & TBI), Theory of carburetion, simple problems on carburetion. Fuel metering in CI engines: Fuel injection in CI engine and simple problems, various types of engines, their classification and salient features. Fuels: Conventional fuels and alternate fuels, engine exhaust emission, carbon monoxide, unburnt hydro carbon, oxides of nitrogen, smoke, density, measurement and control, hydrogen as alternate fuel.

### UNIT 5

Supercharging: Effect of attitude on mixture strength and output of S.I. engines, low and high pressure super charging, exhaust, gas turbo-charging, supercharging of two stroke engines.

## MEC – 603 Heat and Mass Transfer

### Unit-1

**Basic Concepts:** Modes of heat transfer, Fourier's law, Newton's law, Stefan Boltzman law; thermal resistance and conductance, analogy between flow of heat and electricity, combined heat transfer process; **Conduction:** Fourier heat conduction equation, its form in rectangular, cylindrical and spherical coordinates, thermal diffusivity, linear one dimensional steady state conduction through a slab, tubes, spherical shells and composite structures, electrical analogies, critical-insulation-thickness for pipes, effect of variable thermal conductivity.

### Unit 2

**Extended surfaces (fins):** Heat transfer from a straight and annular fin (plate) for a uniform cross section; error in measurement of temperature in a thermometer well, fin efficiency, fin effectiveness, applications; **Unsteady heat conduction:** Transient and periodic conduction, heating and cooling of bodies with known temperatures distribution, systems with infinite thermal conductivity, response of thermocouples.

### Unit 3

**Convection:** Introduction, free and forced convection; principle of dimensional analysis, Buckingham 'pie' theorem, application of dimensional analysis of free and forced convection, empirical correlations for laminar and turbulent flow over flat plate and tubular geometry; calculation of convective heat transfer coefficient using data book.

### Unit 4

**Heat exchangers:** Types- parallel flow, counter flow; evaporator and condensers, overall heat transfers coefficient, fouling factors, log-mean temperature difference (LMTD), method of heat exchanger analysis, effectiveness of heat exchanger, NTU method;

**Mass transfer:** Fick's law, equi-molar diffusion, diffusion coefficient, analogy with heat transfer, diffusion of vapour in a stationary medium.

### Unit 5

**Thermal radiation:** Nature of radiation, emissive power, absorption, transmission, reflection and emission of radiation, Planck's distribution law, radiation from real surfaces; radiation heat exchange between black and gray surfaces, shape factor, analogical electrical network, radiation shields. **Boiling and condensation:** Film wise and drop wise condensation; Nusselt theory for film wise condensation on a vertical plate and its modification for horizontal tubes; boiling heat transfer phenomenon, regimes of boiling, boiling correlations.

**List of Experiments (Pl. expand it):**

- 1 Conduction through a rod to determine thermal conductivity of material
- 2 Forced and free convection over circular cylinder
- 3 Free convection from extended surfaces
- 4 Parallel flow and counter flow heat exchanger effectiveness and heat transfer rate
- 5 Calibration of thermocouple
- 6 Experimental determination of Stefan-Boltzman constant

## MEC- 604(A) – Power Plant Engineering

### UNIT I

Introduction to methods of converting various energy sources to electric power, direct conversion methods, renewable energy sources, solar, wind, tidal, geothermal, bio-thermal, biogas and hybrid energy systems, fuel cells, thermoelectric modules, MHD-Converter.

### Unit II

Fossil fuel steam stations: Basic principles of siting and station design, effect of climatic factors on station and equipment design, choice of steam cycle and main equipment, recent trends in turbine and boiler sizes and steam conditions, plant design and layout, outdoor and indoor plant, system components, fuel handling, burning systems, element of feed water treatment plant, condensing plant and circulating water systems, cooling towers, turbine room and auxiliary plant equipment., instrumentation, testing and plant heat balance.

### UNIT III

**Nuclear Power Station:** Importance of nuclear power development in the world and Indian context, Review of atomic structure and radio activity, binding energy concept, fission and fusion reaction, fissionable and fertile materials, thermal neutron fission, important nuclear fuels, moderators and coolants, their relative merits, thermal and fast breeder reactors, principles of reactor control, safety and reliability features.

### Unit IV

**Hydro-Power Station:** Elements of Hydrological computations, rainfall run off, flow and power duration curves, mass curves, storage capacity, salient features of various types of hydro stations, component such as dams, spillways, intake systems, head works, pressure tunnels, penstocks, reservoir, balancing reservoirs, Micro and pico hydro machines, selection of hydraulic turbines for power stations, selection of site.

### Unit V

**Power Station Economics:** Estimation and prediction of load. Maximum demand, load factor, diversity factor, plant factor and their influence on plant design, operation and economics; comparison of hydro and nuclear power plants typical cost structures, simple problems on cost analysis, economic performance and tariffs, interconnected system and their advantages, elements of load dispatch in interconnected systems.

## MEC-604(B) Lean Manufacturing Engineering

### UNIT 1

**Lean Production:** Introduction, background, and lean thinking, importance of philosophy, strategy, culture, alignment, focus and systems view. Discussion of Toyota Production System.

### UNIT 2

**Lean Production Preparation:** System assessment, process and Value-stream mapping, sources of waste. **Lean Production Processes, Approaches and Techniques:** importance of focusing upon flow. Tools include: Workplace organization – 5S, Stability, Just-In-Time – One piece flow – Pull, Cellular systems, Quick change and set-up reduction methods, Total productive maintenance, Poka-Yoke– mistake proofing, quality improvement, Standards, Leveling and Visual management, Six Sigma.

### UNIT 3

**SMED:** Single minute exchange of dies – theory and practice of the SMED system, the structure of production, Set-up operations, Fundamentals of SMED, Techniques for applying SMED, Basic examples of SMED.

### UNIT 4

**Employee Involvement:** Teams, Training, Supporting and encouraging involvement – Involving people in the change process; communication; importance of culture.

### UNIT 5

**Concurrent Engineering:** Obeya in Toyota's new product development process, cross-functional teams, use of computer technology, information management for simultaneous engineering.

## MEC-604(C) Reverse Engineering & Rapid Prototyping

### UNIT 1

**Introduction:** Introduction to rapid prototyping (RP), Need of RP in context of modern production methods. **Review of solid modelling techniques:** product design by curves, surfaces and solids.

### UNIT 2

**Basic Principles:** Basic Principles of RP, Steps in RP, Process chain in RP, RP integrated CAD-CAM environment, Advantages of RP. **Classification of RP processes:** Based on raw material, Based on energy sources

### UNIT 3

**Rapid Prototyping Systems:** Sterolithography, Solid Ground Curing, Ballistic particle manufacture, Fused Deposition Modeling, Selective Laser Sintering, Laminated Object Manufacturing, 3D Printing, Laser Engineered Net Shaping etc., **Process planning for rapid prototyping:** STL file generation, Defects in STL files and repairing algorithms, Slicing and various slicing procedures.

### UNIT 4

**Problem areas of Rapid Prototyping:** Accuracy issues in RP, Strength issues of RP Parts, Surface roughness problem in RP, Part deposition orientation issues of RP Parts and other issues like build time, support structure, cost etc.,

### UNIT 5

**Rapid tooling techniques:** RTV Silicone Rubber Mold, Spray Metal Tooling, Vacuum Casting, Cast Resin Tooling, Electroforming, Direct AIM Tooling, Direct Metal Laser Sintering, Laminated Tooling, Laser Engineered Net Shaping. **Reverse Engineering:** Introduction to reverse engineering and its integration with rapid prototyping.

## MEC-605(A) Renewable Energy System

### UNIT-I

**Solar Radiation:** Extra-terrestrial and terrestrial, radiation measuring instrument, radiation measurement and predictions. **Solar thermal conversion:** Basics, Flat plate collectors-liquid and air type. Theory of flat plate collectors, selective coating, advanced collectors, Concentrators: optical design of concentrators, solar water heater, solar dryers, solar stills, solar cooling and refrigeration. **Solar photovoltaic:** Principle of photovoltaic conversion of solar energy; Technology for fabrication of photovoltaic devices; **Applications of solar cells in PV generation systems;** Organic PV cells.

### UNIT-II

**Wind energy** characteristics and measurement: Metrology of wind speed distribution, wind speed statistics, Weibull, Rayleigh and Normal distribution, Measurement of wind data, Energy estimation of wind regimes; **Wind Energy Conversion:** Wind energy conversion principles; General introduction; Types and classification of WECS; Power, torque and speed characteristics; power curve of wind turbine, capacity factor, matching wind turbine with wind regimes; Application of wind energy.

### UNIT-III

**Production of biomass,** photosynthesis-C3 & C4 plants on biomass production; Biomass resources **assessment;** **Co2 fixation** potential of biomass; Classification of biomass; Physicochemical characteristics of biomass as fuel **Biomass conversion** routes: biochemical, chemical and thermo chemical Biochemical conversion of biomass to energy: anaerobic digestion, biogas production mechanism, technology, types of digesters, design of biogas plants, installation, operation and maintenance of **biogas plants, biogas plant manure-utilization** and manure values. **Biomass Gasification:** Different types, power generation from gasification, cost benefit analysis of power generation by gasification.

### UNIT-IV

**Small Hydropower Systems:** Overview of micro, mini and small hydro system; hydrology; Elements of turbine; Assessment of hydro power; selection and design criteria ofturbines; site selection and civil works; speed and voltage regulation; Investment issue load management and tariff collection; Distribution and marketing issues. **Ocean Energy:** Ocean energy resources, ocean energy routs; Principle of ocean thermal energy conversion system, ocean thermal power plants. Principles of ocean wave energy and Tidal energy conversion.

### UNIT-V

**Geothermal energy:** Origin of geothermal resources, type of geothermal energy deposits, site selection geothermal power plants; **Hydrogen Energy:** Hydrogen as a source of energy, Hydrogen production and storage. **Fuel Cells:** Types of fuel cell, fuel cell system and sub-system, Principle of working, basic thermodynamics

## MEC-605 (B) Measurement Techniques

### UNIT 1

**Mechanical Measurement:** Need of mechanical measurement, Basic definitions: Hysteresis, Linearity, Resolution of measuring instruments, Threshold, Drift, Zero stability, loading effect and system response. Measurement methods, Generalized Measurement system, Static performance characteristics, Errors and their classification. **Linear and angular measurements:** Linear Measurement Instruments, Vernier calliper, Micrometer, Interval measurements: Slip gauges, Checking of slip gauges for surface quality, Optical flat, Limit gauges, Problems on measurements with gauge.

### UNIT 2

**Measurement of Force, Torque and Strain:** Force measurement: load cells, cantilever beams, proving rings, differential transformers. Measurement of torque: Torsion bar dynamometer, servo controlled dynamometer, absorption dynamometers. Power Measurements. Measurement of strain: Mechanical strain gauges, electrical strain gauges, strain gauge: materials, gauge factors, theory of strain gauges and method of measurement, bridge arrangement, temperature compensation. **Displacement, Velocity/Speed, and Acceleration, Measurement:** Working principal of Resistive Potentiometer, Linear variable differential transducers, Electro Magnetic Transducers, Mechanical, Electrical and Photoelectric Tachometers, Piezoelectric Accelerometer, Seismic Accelerometer.

### UNIT 3

**Temperature measurement:** Temperature Measuring Devices: Thermocouples, Resistance Temperature Detectors, Thermistor, Liquid in glass Thermometers, Pressure Thermometers, Pyrometer, Bimetallic strip. Calibration of temperature measuring devices, Numerical Examples on Flow Measurement. **Metrology:** Basics of Metrology, Need for Inspection, Accuracy and Precision, Objectives, Standards of measurements.

### UNIT 4

**Metrology of Gears and screw threads:** Gear tooth terminology, Sources of errors in manufacturing of gears, Measurement of tooth thickness: Gear tooth vernier, Constant chord method, Addendum comparator method and Base tangent method, Measurement of tooth profile: Tool maker's microscope or projector, Involute tester, Measurement of pitch, Measurement of run out, Lead and Backlash checking. Measurement of concentricity, Alignment of gears. **Screw Thread Measurement:** Errors in threads, screw thread gauges, measurement of element of the external and internal threads, thread calliper gauges.

### UNIT 5

**Metrology of Surface finish:** Surface Metrology Concepts and terminology, Analysis of surface traces, Specification of surface Texture characteristics, and Method of measuring surface finish: Stylus system of measurement, Stylus probe instruments, Wave length, frequency and cut off, other methods for measuring surface roughness: Pneumatic method, Light Interference microscopes, Mecrin Instruments. **Comparators:** Functional Requirements, Classification, Mechanical Comparators, Mechanical Optical Comparators, Electrical Comparators, Pneumatic Comparators.

## MEC-605(C) Welding Technology

### UNIT 1

**Metal Joining Processes:** Introduction, classification of welding processes as per AWS, commonly welded base metals, advantages and disadvantages of welding. Welding as compared to riveting and casting. Soldering, brazing, adhesive bonding processes, welding of dissimilar metals.

### UNIT 2

**Gas Welding Processes:** Introduction, oxy-acetylene welding, oxy-hydrogen, air-acetylene welding. Principle of operation, types of welding flames, Lighting the torch, flame adjustment, gas welding techniques .welding techniques- leftward & rightward. Filler metals and fluxes, gas welding equipments, applications.

### UNIT 3

**Arc Welding Processes:** Introduction, Principle, Working, Specifications, Equipments, Merits and demerits, applications of Carbon arc welding, Flux Shielded Metal arc Welding, Gravity Welding, Sub Merged Arc Welding, GTAW Welding, GMAW Welding, CO2 Welding, Flux Cored Arc Welding(FCAW),Electro Slag welding, Electro Gas welding, Plasma Arc Welding. Source of Power Supply: AC/DC & their characteristics

### UNIT 4

Resistance Welding Processes: Introduction, Principle, Working, Specifications, Equipments, Merits and demerits, applications of Spot welding, Seam welding, Projection Welding, Upset welding, Flash Butt welding, Percussion Welding

### UNIT 5

Solid State and Thermo chemical and Processes: Introduction, Principle, Working, Specifications, Equipments, Merits and demerits, applications of Solid State welding Processes like Cold (or pressure welding), Diffusion(Bonding), Explosive welding, Friction ,Inertia and forged welding. Thermo chemical welding processes like thermit welding, atomic hydrogen welding. Weld Defects & Tests :Introduction, type of defects in weldments, causes and remedies of defects. Repair of defective welds, Visual examination of welding, Fabrication Weldability tests , Hydrostatic Pressure testing and Hydraulic or Gas Pressure testing for leakage, Use of NDT for weldments, Pre and post weld heat treatment, safety standards

## MEC-606 (A) Operation Research

### UNIT 1

**Linear system and distribution models:** Mathematical formulation of linear systems by LP, solution of LP for two variables only, special cases of transportation and assignment and its solution, Vogel's forward looking penalty method, cell evaluation degeneracy, use of SW Lindo, Tora, Excell.

### UNIT 2

**Supply chain (SCM):** Definition, importance, expenditure and opportunities in SCM; integration of inbound, outbound logistics and manufacturing to SCM, flow of material money and information, difficulties in SCM due to local v/s system wide (global) optimization and uncertainties in demand and transportation; Bull-whip effect; customer value; IT, info-sharing and strategic partnerships; plant and warehouse-network configuration; supply contracts and revenue sharing; outsourcing; transportation, cross docking and distribution, forecasting models in SCM; coordination and leadership issues; change of **purchasing role and vendor rating**, variability from multiple suppliers.

### UNIT 3

**Inventory models:** Necessity of inventory in process and safety stock, problem of excess inventory and cycle time (=WIP/ Throughput), JIT/ lean mfg; basic EOQ/ EPQ models for constant review Q-system(S,s); periodic review, base stock P-system; service level, lead time variance and safety stock;; ABC, VED and other analysis based on shelf life, movement, size, MRP technique and calculations, lot sizing in MRP, linking MRP with JIT; evolution of MRP to ERP to SCM and e-business.

### UNIT 4

**Waiting Line Models** Introduction, Input process, service mechanism, Queue discipline, single server (M/M/1) average length and times by Little's formula, optimum service rate; basic multiple server models (M/M/s) (b) **Competitive strategy:** concept and terminology, assumptions, pure and mixed strategies, zero sum games, saddle point, dominance, graphical, algebraic and LP methods for solving game theory problems.

### UNIT 5

**Decision analysis:** decision under certainty, risk probability and uncertainty; Hurwicz criteria; AHP- assigning weight and consistency test of AHP (b) **Meta-heuristics** Definition of heuristic and meta-heuristic algorithms; introduction to Tabu search, Simulated Annealing and Genetic algorithms and solution of traveling salesman and non linear optimization problems.

## MEC-606(B) Statistical Quality Control

### UNIT I

**Introduction:** The Meaning of Quality and Quality Improvement; Brief History of Quality Methodology; Statistical Methods for Quality Control and Improvement; Total Quality Management (quality philosophy, links between quality and productivity, quality costs legal aspects of quality implementing quality improvement).

### UNIT II

**Modeling Process Quality:** Mean, Median, Mode, Standard deviation, Calculating area, The Deming funnel experiment, Normal distribution tables, Finding the Z score, Central limit theorem. **Methods and Philosophy of Statistical Process Control:** Chance and assignable causes, Statistical Basis of the Control Charts (basic principles, choices of control limits, significance of control limits, sample size and sampling frequency, rational subgroups, analysis of pattern on control charts, warning limits, Average Run Length-ARL)

### UNIT III

**Control Charts for Variables:** Control Charts for X-Bar and R charts, Type I and Type II errors. **Process Capability:** The foundation of process capability, Natural Tolerance limits,  $C_p$  – process capability index,  $C_{pk}$ ,  $pp$  – process performance index, summary of process measures.

### UNIT IV

**Control Charts For Attributes:** Binomial distribution, Poisson distribution (from the point of view of Quality control) Control Chart for Fraction Nonconforming, Control Chart for number Nonconforming, Control Charts for Nonconformities or Defects, Control Chart for Number of non-conformities per unit.

### UNIT V

**Lot-By-Lot Acceptance Sampling For Attributes:** The accepting sampling problem, single sampling plan for attributes, Double, Multiple, and sequential sampling, AOQL, LTPD, OC curves **Cumulative-Sum (CUSUM) & Exponentially Weighted Moving Average (EWMA)** **Control Charts:** CUSUM Control Chart (basic principles of the chart for monitoring the process mean); EWMA control chart (EWMA control chart for monitoring process mean), design of a EWMA control chart.

### Reference Book

## MEC-606(C) Ergonomics Engineering

### UNIT 1

**General:** Man in industrial work environments, Ergonomics as multidisciplinary fields, Importance and justification and ergonomics problems, Man-machine-environment system.

### UNIT 2

**Anthropometry:** Significance of human body measurement in design of equipment, Facilities, Work place and operation, Static and dynamic anthropometry, Anthropometric data. **Task Analysis:** Task description, Posture measurement, RULA & REBA analysis and evaluation, Lifting & lowering tasks, Lifting index, Lifting & carrying tasks, NIOSH lifting equation.

### UNIT 3

**Biomechanics:** Introduction to levers of Human Body, Ligaments & Tendons, Joints. Kinetics to include forces producing motion.

### UNIT 4

**Man-Environment Interface:** Environmental factors of temperature, Humidity, Lighting and noise in industry, Effect of environmental factors on human performance, Measurement and mitigation of physical and mental fatigue, Basics of environment design for improved efficiency.

### UNIT 5

**Design of Display and Control:** Need for information display, Elements of information theory, Reaction time, Methods and types of displays, Design of audio and visual displays, Design of hand and foot operated control device, Design of human-computer interface.

# MEC-501 MACHINE COMPONENT DESIGN

## UNIT 1

Design Against Fluctuating Load : causes of stress concentration; stress concentration in tension, bending and torsion; Fluctuating Stresses, notch sensitivity, fatigue stress concentration factor, cyclic loading, endurance limit, S-N Curve, loading factor, size factor, surface factor. Design consideration for fatigue, Goodman and modified Goodman's diagram, Soderberg equation, Gerber parabola, Fatigue Design under Combined Stresses

## UNIT 2

**Design of components** subject to static loads: riveted joints, welded joints threaded joints, pin, key knuckle, and cotter joints, Types of cotter Joint, Dimension of Various part of the knuckle Joint .

## UNIT 3

**Springs: Design of helical compression and tension springs**, consideration of dimensional and functional constraints, leaf springs and torsion springs; fatigue loading of springs, surge in spring; special springs.

## UNIT 4

Brakes & Clutches: Materials for friction surface, uniform pressure and uniform wear theories, Design of friction clutches: Disk , plate clutches, cone & centrifugal clutches. **Design of brakes: Rope, band & block brake, Internal expanding brakes, Disk brakes.**

## UNIT 5

**Spur and Helical Gears:** Force analysis of gear tooth, modes of failure, beam strength, Lewis equation, form factor, formative gear and virtual number of teeth; Gear materials; Surface strength and wear of teeth; strength against wear; **Design of straight tooth spur and Helical Gears, Bevel Gears:** Application of bevel, formative gear and virtual number of teeth; Force analysis; Lewis equation for bevel gears; Strength against wear; Design of bevel gear.

7. Maleev; Machine Design;

## List of Experiments:-

Designing and sketching of components contained in the syllabus.

1. To study design procedure of Knuckle Joint with detailed drawing
2. To study design procedure of cotter joint with detailed drawing
3. To study design procedure of helical and torsion spring with detailed drawings

SSSUTMS

w.e.f. July 2018

Registrar

Sri Satya Sai University of Technology  
& Medical Sciences Sehore (M.P.)

4. To study design procedure of brake with detailed drawings.
5. To study design procedure of clutch with detailed drawings.
6. To study design procedure of spur and helical gear with detailed drawings.

A handwritten signature in blue ink, consisting of a stylized initial followed by a long horizontal stroke.

Registrar  
Sri Satya Sai University of Technology  
& Medical Sciences Sehore (M.P.)

## MEC-502 DYNAMICS OF MACHINES

### UNIT 1

**Dynamics of Engine Mechanisms:** Displacement, velocity and acceleration of piston, turning moment on crankshaft, turning moment diagram .

### UNIT 2

**Governor Mechanisms:** Types of governors, characteristics of centrifugal governors, gravity and spring controlled centrifugal governors, hunting of centrifugal governors, inertia governors.

### UNIT 3

**Balancing of Inertia Forces and Moments in Machines:** Balancing of rotating masses, two plane balancing, determination of balancing masses (graphical and analytical methods), balancing of rotors, **balancing of I.C. engine.**

### UNIT 4

**Friction:** Frictional torque in pivots and collars by uniform wear and uniform pressure, Boundary and fluid film lubrication, friction in journal and thrust bearings, rolling friction, Clutches.

### UNIT 5

**Belt :** Belt drives; Velocity ratio, limiting ratio of tension; power transmitted; centrifugal effect on belts, maximum power transmitted by belt, initial tension, chain and rope drives; Brakes: Band brake, block brakes, Internal and external shoe brakes, braking of vehicles. Dynamometer types and uses. **Analysis of Cams.** Response of un-damped cam mechanism.

4. Norton RL; kinematics and dynamics of machinery; TMH
5. Grover; Mechanical Vibrations
6. Thomson; Theory of Vibrations

### List of Experiment (Expandable)

1. Study of various models of governors.
2. Study of gyroscopic motion and calculation of value of gyroscopic couple.
3. Study of various types of Cams and followers.
4. Study of various first order vibration systems.
5. To study working of friction clutches using models
6. To study working of internal expanding brake

Registrar  
Sri Satya Sai University of Technology  
& Medical Sciences Sehore (M.P)

## MEC-503 Metal Cutting & CNC Machines

### UNIT I

**Lathe:** Classification of machine tools and their basic components; lathe- specification, components & accessories, various operations on lathes, capstan & turret lathes, tool layout, methods of thread production, machining time, single point cutting tools, tool signature and nomenclature

### UNIT II

**Grinding:** Types of grinding machines, surface, cylindrical and internal grinding, grinding wheels, specifications, wheel turning and dressing without eccentricity, centre-less grinding.

### UNIT III

**Milling:** Vertical, horizontal and universal type machines, specifications and classifications of milling machines, universal dividing head plain and different indexing, gear cutting, milling cutters.

**Drilling & Broaching:** Fixed spindle, radial and universal drilling machines, drilling time, broaching principle, broaches and broaching machines.

### UNIT IV

**Shapers:** Classification and specifications, principle parts, quick return mechanism, shaper operations, speed feed, depth of cut, machining time. Surface qualities, equipment used for rating surfaces, rms. CLA value, causes for surface irregularities. **Gear Cutting:** Die casting, methods of forming gears, generating process, Gear shaping, gear shaving, gear grinding gear testing.

### UNIT V

**Mechatronics:** Introduction to control systems, analog control, transfer function, procedure for writing transfer function, signal flow diagram, introduction to electronic components like switches, magnetic type, electromagnetic type, transducers and other sensors, servo motors, basics of CD-ROM players, PLC, applications, CNC machines.

& Medical Sciences Sehore (M.P)

### List of Experiment (Pl. expand it):

1. To make a job on lathe machine with all operations like turning, step turning, drilling, taper turning, thread cutting and knurling.
2. Study of center less grinding machine/ tool and cutter type grinding machine.
3. Study of horizontal/ universal milling machine, diving head and indexing mechanism of it.

- 4. To cut a spur gear on milling machine using rapid indexing method.
- 5. Study of radial drilling machine and preparing a job on it.
- 6. To study a sapping machine to learn about working of quick return mechanism.

A handwritten signature in blue ink, likely belonging to the Registrar.

& Medical Sciences Sehore (M.P.)

# MEC-504 (A) MECHANICAL MEASUREMENT AND CONTROL

## UNIT 1

**Measurement** : Significance of Mechanical Measurements, Classification of measuring instruments, generalized measurement system, types of inputs: Desired, interfering and modifying inputs. Static characteristics: Static calibration, Linearity, Static Sensitivity, Accuracy, Static error, Precision, Reproducibility, Threshold, Resolution, Hysteresis, Drift, Span & Range etc. Errors in measurement: Types of errors, Effect of component errors, Probable errors.

## UNIT 2

**Displacement Measurement** : Transducers for displacement, displacement measurement, potentiometer, LVDT, Capacitance Types, Digital Transducers (optical encoder) **Strain Measurement** : Theory of Strain Gauges, gauge factor, temperature Compensation, Bridge circuit, orientation of strain gauges for force and torque, Strain gauge based load cells and torque sensors **Measurement of Angular Velocity**: Tachometers, Tachogenerators, Digital tachometers and Stroboscopic Methods, Acceleration Measurement.

## UNIT 3

**Pressure Measurement**: Elastic pressure transducers viz. Bourdon tubes, diaphragm, bellows and piezoelectric pressure sensors, High Pressure Measurements. **Vacuum measurement**: Vacuum gauges viz. McLeod gauge, Ionization and Thermal Conductivity gauges. **Flow Measurement**: Bernoulli's flow meters, Ultrasonic Flowmeter, Magnetic flow meter, rotameter. **Temperature Measurement**: Electrical methods of temperature measurement Resistance thermometers, Thermistors and thermocouples, Pyrometers.

## UNIT 4

Introduction to control systems, Classification of control system, Open loop and closed loop systems, Mathematical modelling of control systems, concept of transfer function, Block diagram algebra.

## UNIT 5

Transient and steady state analysis of first and second order system. Time Domain specifications. Step response of second order system. Steady-state error, error coefficients, steady state analysis of different type of systems using step, ramp and parabolic inputs.

## MEC-504 (B) Industrial Tribology

### UNIT 1

**Introduction:** History, Industrial Importance. **Engineering Surfaces:** Properties and Measurement: Measurement Methods, Surface Profilometry, Statistical Description of Roughness.

### UNIT 2

**Surface Contact:** Hertz contact theory, Greenwood-Williamson model, Elastic-plastic contact. **Adhesion:** Basic Models, Factors influencing Adhesion.

### UNIT 3

**Friction:** Measurement Methods, Origin of Friction, Friction Theories – adhesion and ploughing, Mechanisms, Friction of Metals, Non-metallic Materials. **Wear:** Types: Adhesive, Abrasive, Corrosive, Fatigue, Minor Forms: Fretting, Erosion, Percussion, Delamination Theory, Wear Debris Analysis, Wear Testing Methods, Wear of Metals, Ceramics, Polymers.

### UNIT 4

**Surface Engineering:** Surface Treatments: Microstructural and Thermochemical Treatments, Surface Coatings: Hard Facing, Vapour Deposition Processes: PVD, CVD, PECVD etc. **Nanotribology:** Measurement Tools: Surface Force Apparatus, Scanning Tunnelling Microscope, Atomic / Friction Force Microscope.

### UNIT 5

**Lubrication:** Basic Equations for Fluid Film Lubrication. Hydrodynamic lubrication -Thrust and Journal bearings, Squeeze Film Bearings, Hydrostatic lubrication, Gas-Lubrication. Lubrication of rolling element bearings. Boundary lubrication – metal working lubrication, solid film lubrication, Hygiene of Lubricants.

## MEC-504 (C) Production & Operation Management

### UNIT 1

**Introduction** : System concept of production; Product life cycle; Types and characteristics of production system; Productivity; Process and product focused organization structures; Management decisions – strategic, tactical and operational.

### UNIT 2

**Forecasting** : Patterns of a time series – trend , cyclical, seasonal and irregular; Forecasting techniques : moving average, simple exponential smoothing, linear regression; Forecasting a time series with trend and seasonal component

### UNIT 3

**Materials Management and Inventory Control** : Components of materials management; Inventory control : EOQ model, Economic lot size model, Inventory model with planned shortages, Quantity discounts for EOQ model; ABC analysis; Just-in-time inventory management. **Materials Requirement Planning** : MRP concept – bill of materials (BOM), master production schedule; MRP calculations.

### UNIT 4

**Machine Scheduling** : Concept of Single machine scheduling – shortest processing time (SPT) rule to minimize mean flow time, Earliest due date (EDD) rule to minimize maximum lateness, Total tardiness minimizing model; Minimizing makespan with identical parallel machines; Johnson's rule for 2 and 3 machines scheduling.

### UNIT 5

**Project Scheduling** : Activity analysis; Network construction; critical path method (CPM); **Crashing of project** network. **Quality Assurance** : Meaning of Quality; Quality assurance system; choice of process and quality; Inspection and control of quality; Maintenance function & quality; Process control charts : x-chart and Rchart, p-chart and c-chart; Acceptance sampling : Operating characteristic (O.C) curve, Single sampling plan, Double sampling plan, Acceptance sampling by variables; concept of Six Sigma.

## MEC-505 (A) Turbo Machinery

### UNIT 1

**Energy transfer in turbo machines:** Application of first and second laws of thermodynamics to turbo machines, Moment of momentum equation and Euler turbine equation, Principles of impulse and reaction machines, Degree of reaction, Energy equation for relative velocities.

### UNIT 2

**Steam turbines: Impulse staging:** Velocity and pressure compounding, Include qualitative analysis, Effect of blade and nozzle losses on vane efficiency, Stage efficiency, Analysis for optimum efficiency, Mass flow and blade height. **Reactions staging:** Parson's stages, Degree of reaction, Nozzle efficiency, Velocity coefficient, Stator efficiency, Carry over efficiency, Stage efficiency, Vane efficiency, Conditions for optimum efficiency, Axial thrust, Reheat factor in turbines, Free and forced vortex types of flow, Governing and performance characteristics of steam turbines.

### UNIT 3

**Water turbines:** Classification, Pelton, Francis and Kaplan turbines, vector diagrams and work done, draft tubes, governing of water turbines.

### UNIT 4

**Centrifugal Pumps:** Classification, Advantage over reciprocating type, Definition of manometric head, Gross head, Static head, Vector diagram and work done. Performance and characteristics: Application of dimensional analysis and similarity to water turbines and centrifugal pumps, Selection of machines, Hydraulic, volumetric, Mechanical and overall efficiencies

### UNIT 5

**Compressors:** Centrifugal Compressor – Vector diagrams, Work done, Temp and pressure ratio, Slip factor, Work input factor, Pressure coefficient, Dimensions of inlet eye, Impeller and diffuser. Axial flow Compressors Vector diagrams, Work done factor, Temp and pressure ratio, Degree of reaction.

## MEC-505 (B) Material Handling

### UNIT 1

**Introduction :** Definition, importance and scope of materials handling (MH); classification of materials; codification of bulk materials ; utility of following principles of MH – (i) materials flow, (ii) simplification, (iii) gravity, (iv) space utilization, (v) unit size, (vi) safety, (vii) standardization, (viii) dead-weight, (ix) idle time, (x) motion.

### UNIT 2

**Unit load :** Definition; advantages & disadvantages of unitization; unitization by use of platform, container, rack, sheet, bag and self contained unit load; descriptive specification and use of pallets, skids, containers, boxes, crates and cartons; shrink and stretch wrapping.

**Classification of MH Equipment :** Types of equipment – (i) industrial trucks & vehicles, (ii) conveyors, (iii) hoisting equipment, (iv) robotic handling system and (v) auxiliary equipment; Independent equipment wise sub classification of each of above type of equipment.

### UNIT 3

**Industrial trucks & vehicles :** Constructional features and use of the following equipment – (i) wheeled hand truck, (ii) hand pallet truck, (iii) fork lift truck; Major specifications, capacity rating and attachments of fork lift truck.

### UNIT 4

**Conveyors :** Use and characteristics of belt conveyor, constructional features of flat and troughed belt conveyor; Use and constructional features of Flg. types of chain conveyors – (i) apron, car and trolley type; Construction of link-plate chains; Dynamic phenomena in chain drive; Use and constructional features of roller conveyors; Gravity and powered roller conveyor; Pneumatic conveyor-use and advantages; Positive, negative and combination system of pneumatic conveyors; constructional feature, application and conveying capacity of screw conveyor.

### UNIT 5

**Hoisting Equipment :** Advantage of using steel wire rope over chain; constructional features of wire ropes; Rope drum design; Pulley system-simple vs. multiple pulley; Load handling attachments : hooks, grabs, tongs, grab bucket; Arrangement of hook suspension with cross piece and pulleys (sheaves); Use and constructional features of (i) hand operated trolley hoist, (ii) winch; (iii) bucket elevator, (iv) Jib crane, (v) overhead traveling crane and (vi) wharf crane; Level luffing system of a wharf crane; Utility of truck mounted and crawler crane.

## MEC-505 (C) Supply Chain Management

### UNIT 1

**Building a Strategic Frame Work to Analyse Supply Chains:** Supply chain stages and decision phases, Process view of supply chain: Supply chain flows, Examples of supply chains, Competitive and supply chain strategies, Achieving strategic fit: Expanding strategic scope, Drivers of supply chain performance. Framework for structuring drivers: inventory, transportation facilities, information obstacles to achieving fit.

### UNIT 2

**Designing the Supply Chain Network :** Distribution Networking: Role, Design, Supply Chain Network(SCN): Role, Factors, Framework for design decisions. **Materials Management:** Scope, Importance, Classification of materials, Procurement, Purchasing policies, Vendor development and evaluation. Inventory control systems of stock replenishment, Cost elements, EOQ and its derivative modules.

### UNIT 3

**Dimensions of Logistics :** Introduction: A Macro and Micro Dimensions, Logistics interfaces with other areas, Approach to analyzing logistics system, Logistics and systems analyzing: Techniques of logistics system analysis, factors affecting the cost and Importance of logistics.

### UNIT 4

**Warehouse and Transport Management:** Concept of strategic storage, Warehouse functionality, Warehouse operating principles, Developing warehouse resources, Material handling and packaging in warehouses, Transportation Management, Transport functionality and principles, Transport infrastructure, transport economics and Pricing. Transport decision making.

### UNIT 5

#### IT in Supply Chain

IT framework, Customer Relationship Management (CRM), internal Supply chain management, Supplier Relationship Management (SRM) and Transaction Management, Coordination in a Supply Chain. Lack of supply chain coordination and the Bullwhip effect, Obstacle to Coordination, Managerial levers, Building partnerships and trust. RFID systems.

## MEC-506 (A) Work Study and Ergonomics

### UNIT 1

**Method study:** purpose of work study, its objectives, procedure and applications; method study definition and basic procedure, selection of job, various recording techniques like outline process charts, flow process charts, man machine charts, two handed process charts, string diagram, flow diagram, multiple activity chart, simo, cyclographs and chrono-cyclographs; critical examination, development, installation and maintenance of improved method; principles of motion economy and their application in work design; micro motion study, memo motion study and their use in methods study.

### UNIT 2

**Work measurement:** Introduction & definition, objectives and basic procedure of work measurement; application of work measurement in industries; time study: basic procedure, equipments needed, methods of measuring time, selection of jobs, breaking a job into elements; numbers of cycles to be timed; rating and methods of rating, allowances, calculation of standard time.

**Work sampling:** Basic procedure, design of work sampling study conducting work sampling study and establishment of standard-time.

### UNIT 3

**Job evaluation and incentive schemes:** Starlight line, Taylor, Merrick and Gantt incentive plans  
**Standard data system;** elemental and non-elemental predetermined motion systems, work factors system; Methods Time Measurement (MTM), MOST

### UNIT 4

**Human factor engineering:** Definition and history of development of human factors engineering, types & characteristics of man-machine-system, relative capabilities of human being and machines; development and use of human factor data; information input and processing; Introduction to information theory; factors effecting information reception and processing; coding and selecting of sensory inputs.

### UNIT 5

**Display systems and anthropometric data:** Display- types of visual display, visual indicators and warning signals; factorial and graphic display; general principles of auditory and tactual display, characteristics and selection.

## MEC-506 (B) Industrial Safety Engineering

### UNIT 1

#### Safety management

Need for safety, safety and productivity, planning for safety, formulation of safety policy, safety management techniques - job safety analysis, safety sampling technique, incident recall technique, plant safety inspection, safety organizations and its functions.

### UNIT 2

#### Accident prevention

Nature and causes of accidents, accident proneness, cost of accidents, accident prevention methods, accident reporting and investigation, personal protective equipment's, safety education and training, damage control and disaster control.

### UNIT 3

#### Operational Safety

General safety considerations in material handling – manual and mechanical, safety in machine shop, safety in use of hand and portable (power) tools, safety in use of electricity, safety in welding and cutting, principles of guarding, safety in grinding, safety in heat treatment shop, safety in gas furnace operation

### UNIT 4

#### Occupational Health and Hygiene

Concept and spectrum of health, levels of prevention, functional units of occupational health service, activities of occupational health unit, occupational and work related diseases such as silicosis, asbestosis, lead, nickel, chromium and manganese toxicity, prevention and control, gas poisoning, effects and prevention, hearing conservation programme - physical and chemical hazards - control measures.

### UNIT 5

#### Fire engineering and explosion control

Fire triangle, classification of fires, fire properties of solid, liquid and gas, building evaluation for fire safety, fire load, fire resistance materials and fire testing, structural fire protection, exits and egress - industrial fire protection systems, sprinkler – hydrants, portable extinguishers - fire suppression systems, detection systems, principles of explosion - detonation and blast waves, explosion venting, explosion parameters, explosion suppression systems based on CO<sub>2</sub> and halogen.

A collection of handwritten signatures and a circular stamp in blue ink. The stamp is circular with a star in the center and text around the perimeter. There are several other signatures of varying styles scattered around the stamp.

## MEC-506 (C) Environmental Pollution Monitoring

### UNIT 1

Air pollution: Definition, Sources and Classification of air pollutants. Transport and diffusion of pollutants. Gas laws governing the behavior of pollutants in the atmosphere. Meteorological parameters, scale of meteorology, Effect of temperature, precipitation, humidity, pressure, radiation and wind. Heat transferring processes, atmospheric stability, inversions and mixing heights, Plume behavior and Stack dispersion theories & models of monitoring & control of exhaust emissions. Effects of air pollution on man, animal, plants, inanimate objects and climate. Ambient air quality standards and air pollution indices.

### UNIT 2

Air sampling and monitoring techniques - Settleable and suspended particulate matter - Dust fall jar and Impingement Method, RDS/HVS samplers (Ambient Air monitoring); Stack gas/dust Sampling technique and other techniques of air monitoring for pollutants. Automobile pollution in Indian cities. **Monitoring and control of exhaust emissions.** Noise Pollution: Definition, Sources and Terminology; types of noise; Measurement of noise; Noise indices; Effect of meteorological parameter on noise propagation. Noise exposure level and Standard Impact on biota and inanimate objects. Noise control and abatement measures.

### UNIT 3

Aquatic Pollution: Definition; Sources and classification of aquatic pollutants. Cause and consequences of pollution on surface, subsurface and marine water sources. Coastal water intrusion. Oil leakage and industrial effluents. Water quality indices. **Thermal pollution** Sources, causes and effects. Preventive and control measures.

### UNIT 4

Soil Pollution: Definition, sources and classification of soil pollutants and their impacts on physico-chemical and biological properties of soil, plants, animals and man. Physico-chemical and bacteriological sampling and analysis of soil quality. Industrial waste effluents and heavy metals, their interactions with soil components, Soil microorganisms and their function, degradation of insecticides, fungicides and weedicides in soil. Interaction of fertilizer (NPK) with different components of soil. Soil pollution control Measures.

### UNIT 5

**Radioactive Pollution** Definition, Radioactivity, Radionuclide, Radiation emissions, sources, Radioactive decay and buildup. Biological effects of radiation. Radiation exposure Standards. Radioactive pollution impacts on ecosystem. Pollution control measures. Biological dosimetry.

Minutes of Board of Studies Committee Meeting Dated on **15.05.2018**

The Board of Studies Committee Meeting was held in the room of Department of Mechanical Engineering at 2:30 PM. on **18.05.2018**, Following members were present.

1. Mrs. Priyanka Jhavar, Associate Prof. (Mechanical Engineering), Chairman
2. Dr. G. R. Selokar , Professor (Mechanical Engineering), Member
3. Mr. Sanjay Kalraiya, Associate Prof. (Mechanical Engineering), Member
4. Mr. Anil Verma , Asst. Prof. (Mechanical Engineering) – Member
5. Mr. Dhananjay Yadav, Asst. Prof. (Mechanical Engineering), Member
6. Mr. Sachin Baraskar , Asst. Prof. (Mechanical Engineering), Member

The Chairman of Board of Studies Committee welcomes and appreciated the efforts put up by the faculty for progress of the departmental activities. The following Agenda points were discussed and resolved.

#### **Agenda Preparation of syllabus and Scheme for VII and VIII SEM CBCS.**

##### Discussion Scheme

Scheme and syllabus was put up before the member as per recent CBCS guidelines, It was discussed in detail by the members and some modification were suggested.

##### **Resolution of the Discussion:**

It was resolved that scheme and syllabus as proposed with some modification and may be accepted

Registrar

Sri Satya Sai University of Technology  
& Medical Sciences Sehore (M.P.)

The Chairman thanks the members for peaceful conduction of meeting.

**Signature of All members (Including Chairman)**

## MEC-701 MECHANICAL VIBRATION AND NOISE ENGINEERING

### Unit I

**Fundamental Aspects of Vibrations:** Vibration, main causes, advantages and disadvantages; engineering applications of vibration and noise; vector method of representing harmonic motion; characteristics of vibration, harmonic analysis and beats phenomenon, work done by harmonic forces on harmonic motion; periodic, non-harmonic functions- Fourier series analysis; evaluation of coefficients of Fourier series; elements of vibratory system; lumped and distributed parameter systems.

**Undamped Free Vibrations:** Derivation of differential equation of motion: the energy method, the method based on Newton's second law of motion, and Rayleigh's method. Solution of differential equation of motion: Natural frequency of vibration. Systems involving angular oscillations: the compound pendulum.

### Unit II

**Damped Free Vibrations: Viscous damping; coefficient of damping; damping ratio;** under damped, over damped and critically damped systems; logarithmic decrement; frequency of damped free vibration; Coulomb or dry friction damping; frequency, decay rate and comparison of viscous and Coulomb damping; solid and structural damping; slip or interfacial damping.

### Unit III

**Harmonically excited Vibration:** One degree of freedom- forced harmonic vibration; vector representation of forces; excitation due to rotating and reciprocating unbalance; vibration Isolation, force and motion transmissibility; absolute and relative motion of mass (Seismic Instruments ). Whirling Motion and Critical Speed : Whirling motion and Critical speed : Definitions and significance .Critical - speed of a vertical. Critical speed of a shaft carrying multiple discs (without damping ), Secondary critical speed.

### Unit IV

**Systems With Two Degrees of Freedom :** Principal modes of vibration; torsion vibrations; Forced, Un-damped vibrations with harmonic excitation ; Coordinate coupling; Dynamic vibration absorber; torsion Vibration Absorber; Pendulum type of dynamic vibration.

### Unit V

**Noise Engineering -Subjective response of sound:** Frequency and sound dependent human response; the decibel scale; relationship between, sound pressure level (SPL), sound power level and sound intensity scale; relationship between addition, subtraction and averaging,

**Noise: Sources, Isolation and Control:** Major sources of noise on road and in industries, noise due to construction equipments and domestic appliances, industrial noise control, strategies-noise control at source (with or without sound enclosures),

#### References Book :

- 5- Thomson , W.T., Theory of Vibration with Applications , C.B.S Pub & distributors .  
Grading System 2013 - 14  
6- Singiresu Rao, "Mechanical Vibrations , Pearson Education .

### List of Experiments:-

- 1- To find out effect of load on natural frequency of vibrations of a lever pin supported at one end carrying adjustable load on a vertical screwed bar and spring supported at some intermediate point (i) When the dead weight of rods is neglected and (ii) when their dead weight is taken into account .
- 2- To find out frequency of damped free vibration and rate of decay of vibration-amplitude in the system.
- 3- To find out natural frequency and damped free frequency of a torsion pendulum and , hence to find out coefficient of damping of the oil ;
- 4- To observe the phenomenon of whirl in a horizontal light shaft and to determine the critical speed of the shaft.
- 5- To observe the mode shapes of a spring-connected, double pendulum and hence to demonstrate the phenomenon of beats.
- 6- To demonstrate the principle of tuned Undamped Dynamic Vibration Absorber and to determine the effect of mass-ratio (of main and auxiliary mass) on the spread of the resulting natural frequencies ;
- 7- To take measurements of sound Pressure Level (SPL) and to carry out octave band analysis of a machine using Noise Level Meter.

The image shows several handwritten scribbles in blue and green ink. In the center is a circular purple stamp with the text "S. S. S. UNIVERSITY OF TECHNOLOGY & MEDICAL SCIENCES SEHORE (M.P.)" around the perimeter and "S. S. S. ENGINEERING" in the center. Below the stamp is a signature in blue ink.

## MEC-702 AUTOMOBILE ENGINEERING

### Unit-I:

**Chassis & Body Engg :** Types, Technical details of commercial vehicles, types of chassis, lay out, types of frames, testing of frames for bending & torsion on unutilized body frame, vehicle body and their construction, drivers visibility and methods for improvement, safety aspects of vehicles, vehicle aerodynamics, optimization of body shape, drivers cab design, body materials, location of engine, front wheel and rear wheel drive, four wheel drive.

### Unit-II

**Steering System:** front axle beam, stub axle, front wheel assembly, principles of types of wheel alignment, front wheel geometry viz. camber, Kingpin inclination, castor, toe-in and toe out, condition for true rolling motion, center point steering, directional stability of vehicles, steering gear, power steering, slip angle, cornering power, over steer & under steer, gyroscopic effect on steering gears.

### Unit-III

**Transmission System:** Function and types of clutches, single plate, multi-plate clutch, roller & spring clutch, clutch lining and bonding, double declutching, types of gear Boxes, synchroniser, gear materials, determination of gear ratio for vehicles, gear box performance at different vehicle speed, automatic transmission, torque converters, fluid coupling, principle of hydrostatic drive, propeller shaft, constant velocity universal joints, differential gear box, rear axle construction.

### Unit-IV

**Suspension system :** Basic suspension movements, Independent front & rear suspension, shock absorber, type of springs: leaf spring, coil spring, air spring, torsion bar, location of shackles, power calculations, resistance to vehicle motion during acceleration and breaking, power & torque curve, torque & mechanical efficiency at different vehicle speeds, weight transfer, braking systems, disc theory, mechanical, hydraulic & pneumatic power brake systems, performance, self-energisation, airbleeding of hydraulic brakes, types of wheels and tyres, tyre specifications, construction and material properties of tyres & tubes.

### Unit-V

**Electrical and Control Systems:** storage battery, construction and operation of lead acid battery, testing of battery, principle of operation of starting mechanism, different drive systems, starter relay switch, regulator electric fuel gauge, fuel pump, horn, wiper, Lighting system, head light dazzling, signaling devices, battery operated vehicles, choppers. importance of maintenance, scheduled and unscheduled maintenance, wheel alignment, trouble Shooting probable causes & remedies of various systems, microprocessor based control system for automobile, intelligent automobile control systems.

### Unit-VI

**Emission standards and pollution control:** Indian standards for automotive vehicles- Bharat I and II, Euro-I and Euro-II norms, fuel quality standards, environmental management systems for automotive vehicles, catalytic converters, fuel additives, and modern trends in automotive engine efficiency and emission control.

Registrar

## MEC-703 DESIGN OF HEAT EXCHANGERS

### Unit I

**Introduction:** Types of heat exchangers heat transfer laws applied to heat exchangers convection Coefficients, resistance caused by the walls and by fouling, overall heat transfer coefficient.

### Unit II

**Thermal & hydraulic design of commonly used heat exchangers :** LMTD & NTU Methods, correction factors, Double pipe heat exchangers , shell and tube heat exchangers, condensers , Evaporators ,Cooling and dehumidifying coils, cooling towers, evaporative condensers ,design of air washers, desert coolers.

### Unit III

**TEMA standard:** Tubular heat exchangers TEMA standard heat-exchanger nomenclature, selection criteria for different types of shells and front and rear head ends; geometrical characteristics of TEMA heat exchangers.

### Unit IV

Review of mechanical Design, Materials of Construction, corrosion damage, testing and inspection.

### Unit V

**Heat Pipe:** Basics & its mathematical model, micro Heat Exchangers , Use of Software in heat exchanger design.

### References Books:

1. Kern D Q, Kraus A D; Extended Surface Heat Transfer; TMH.
2. Kays, Compact Heat Exchangers and London, TMH.
3. Kokac, Heat Exchangers- Thermal Hydraulic fundamentals and design;TMH.
4. Tubular Exchanger Manufacturer Association (TEMA), and other codes

### List of Experiments:-

1. To Study of heat exchangers.
2. To Study of LMTD & NTU Methods.
3. To Study of Tubular heat exchangers TEMA standard heat- exchanger nomenclature
4. To Study of Review of mechanical Design.
5. To Study of of Software in heat exchanger design.

Registrar

& Medical Sciences Sehore (M.P.)

## MEC 704 (A) INDUSTRIAL ENGINEERING

### Unit-I

**Introduction to Industrial Engineering** - Evolution of modern Concepts in Industrial Engineering - Functions of Industrial Engineering - Field of application of Industrial Engineering Product Development and research- Design function - Objectives of design, - Manufacturing vs purchase- Economic aspects- C-V-P analysis – simple problems.

### Unit-II

**Plant layout and Material handling-** principles of material handling, Types of material handling equipments, Selection and application. Preventive and break- down maintenance - Replacement policy-- Methods of replacement analysis-Method of providing for depreciation- Determination of economic life - Simple problems.

### Unit-III

**Methods engineering:** Analysis of work methods using different types of process chart and flow diagrams- Critical examination Micro motion study and therbligs- Principles of motion economy – Work measurement-Performance rating.-Determination of allowances and standard time. - Job evaluation and merit rating

### Unit-IV

**Industrial relations-** Psychological attitudes to work and working conditions - fatigue- Methods of eliminating fatigue- Effect of Communication in Industry-Industrial safety-personal protective devices-, causes and effects of industrial disputes- Collective bargaining- Trade union - Workers participation in management.

### Unit-V

**Production planning and control-** Importance of planning - job, batch and mass production- Introduction and need for a new productproduct life cycle. - Functions of production control - Routing , Scheduling, dispatching and follow up- Gantt charts. Inventory Control, Inventory models

### Unit-VI

**Quality control and Inspection-** Destructive and non-destructive testing methods- process capability- Statistical quality control – causes of variation in quality- control charts for X and R. Reliabilitycauses of failures- Bath tub curve.-System .TQM, ISO, Six Sigma and Quality circles (Brief description only).

## MEC 704 (B) NANO MANUFACTURING

### Unit-I

Introduction to Nano-manufacturing and Nanotechnology, Advantages, disadvantages and applications of Nanotechnology and Nano-manufacturing, Top-down and Bottom-up techniques,

### Unit-II

Self-Assembly, self-assembled monolayer. Characterization Techniques: Scanning Electron Microscope, Transmission Electron Microscope, Atomic force microscopy (AFM), Scanning Probe Microscope (SPM),

### Unit-III

Scanning Tunneling Microscope (STM), X-ray Diffraction (XRD). Nano-lithography: Photolithography: UV Photolithography, X-ray Lithography, Electron Beam Lithography, Particle Beam Lithography's, Probe lithography's.

### Unit-IV

Micro and Nano machining, Focused Ion beam machining. Chemical methods in Nano manufacturing, Si processing methods: Cleaning /etching, Epitaxy, Molecular-beam epitaxial, chemical beam epitaxial

### Unit-V

Metal-organic CVD (MOCVD), Plasma enhanced CVD (PECVD), Sol-gel Technique. Properties and application of Nano Materials: Fullerene Structure, Carbon nano tubes, Nano Particles, Processing of Nano composites, Micro & Nano Electromechanical Systems (MEMS, & NEMS).

## MEC – 704 (C) RELIABILITY ENGINEERING

### Unit -I

Reliability: Definition Probability Concept; Addition of Probabilities; Complimentary Events; Calculation of Reliability, Reliability analysis.

### Unit –II

Failure Data Analysis: Introduction, Mean Failure Rate, Mean Time to Failure (MTTF), Mean Time between Failures (MTBF), Graphical Plots, MTTF in terms of Failure Density, MTTF in Integral Form.

### Unit - III

Conditional Probability : Introduction, Hazard Rate as conditional probability, Principles of CBM, Pillars of condition monitoring, CBM implementation and benefits, visual monitoring, vibration monitoring, wear debris monitoring, corrosion monitoring, performance monitoring.

### Unit - IV

**General Maintenance & Management function**: Breakdown, emergency, corrective, predictive, Objectives and evolution of TPM, Effects and Criticality analysis (FMECA), applications and benefits, risk evaluation, risk priority.

### Unit – V

Maintainability and Availability: Introduction, Maintenance Planning & scheduling, Maintenance organization, Tools for better maintenance –preventive, shutdown and Scheduled maintenance.

## MEC-705 (A) SIMULATION & PROCESS MODELING.

### Unit I:

Introduction to modeling and simulation: Modeling and simulation methodology, system modeling, concept of simulation; gaming; static, continuous and discrete event simulation.

### Unit II:

Basic concept of probability, generation and characteristics of random variables, continuous and discrete variables and their distributions; mapping uniform random variables to other variable distributions; linear, nonlinear and stochastic models

### Unit III;

Introduction to Queuing Theory: Characteristics of queuing system, Poisson's formula, birth death system, equilibrium of queuing system, analysis of M/M/1 queues. Introduction to multiple server Queue models M/M/c Application of queuing theory in manufacturing and computer system

### Unit IV;

System Dynamics modeling: Identification of problem situation, preparation of causal loop diagrams and flow diagrams, equation writing, level and rate relationship, Simulation of system dynamics models.

### Unit V:

Verification and validation: Design of simulation experiments, validation of experimental models, testing and analysis. Simulation languages comparison and selection, study of simulation software - Arena, Pro-model, SIMULA, DYNAMO, STELLA, POWERSIM.

## MEC- 705 (B) TRIBOLOGY

### Unit – I

TRIBOLOGICAL ASPECTS OF ROLLING MOTION Introduction to tribological systems and their characteristic features; analysis and assessment of surface; topography; deterministic and stochastic tribo-models for asperity contacts; techniques of surface examination; technological properties of surfaces. Quantitative laws of sliding friction, causes of friction, adhesion theory, laws of rolling friction, measurement of friction

### Unit – II

WEAR Introduction, mechanism of wear, types of wear, quantitative laws of wear, measurement of wear, wear resistance materials

### Unit - III

LUBRICANTS Introduction, dry friction, boundary lubrication, hydrodynamic, hydrostatic and elastohydrodynamic lubrication, functions of lubricants, types and properties, lubricant additives. Principles, application to rolling contact bearings, cams, Gears

### Unit - IV

BEARING DESIGN CONSIDERATION & CHARACTERISTICS Geometry and pressure equation of journal bearing, hydrostatic bearings, thrust bearings, porous bearings and hydrodynamic gas bearings. Journal bearings with specialized applications. General requirements and different types of bearing materials.

### Unit - V

SURFACE INTERACTIONS Elastic & Plastic deformation of surfaces. Contact of Solids, Contact of Ideally Smooth Surfaces. Distribution of Pressure over elastic contact of two curvilinear bodies. Formulae for calculation of contact area. Physico-Mechanical properties of surface layers, Characteristics of Surface Geometry. Classes of surface roughness. Contact of rough surfaces. Interaction of surface peaks. Real and contour area of contact.

## MEC – 705 (C) ENERGY CONVERSION SYSTEMS

### Unit-I

Introduction: need for energy conservation. Energy conservation in production of heat, Introduction to different energy conversion systems, site selection criteria of thermal power plant layout of modern thermal power plant

### Unit -II

Details of different components of thermal power plant selection criteria of different components of thermal power plant ex. Fuel consumption economy , firing arrangement and selection of burners,. Fluidized bed combustion.

### Unit-III

Energy conservation in use of heat. Economical design of furnace, water treatment, drying, conditioning and industrial space heating, boiler accessories etc. Selection of cycles: Combined cycle, power generation for better energy efficiency management.

### Unit-IV

Combined cycle power plant. Energy conservation furnish better management techniques, improved production design, improved production powers, substituted materials, waste recovery and recycling. New and renewable energy technologies.

### Unit- V

Appropriate energy technology for rural development. Energy conservation in production, agriculture sector. Instrumentation and control in energy conservation: Economics of conventional and new and renewable energy technologies. Environmental aspects and case studies :

### References Books:

& Medical Sciences Sehore (M.P.)

## MEC-706 (A) – PROJECT MANAGEMENT

### Unit I

Concepts of project management:: Meaning, definition and characteristics of a project, technical and socio-cultural dimensions; project life cycle phases, project planning and graphic presentation; work breakdown structure, manageable tasks; size of network; blow down NW; identity and logic dummy activity; Fulkerson rule for numbering NW; time-scaled NW

### Unit-II

NW analysis: PERT network; mean time and variances; probability to complete PERT project in specified time; CPM network; Event Occurrence Time (EOT); activity start/ finish times; forward and reverse path calculations, concept and calculation of floats; resource allocation and critical-chain; overview of MS-project-2000.

### Unit-III

Project duration and control: Importance and options to accelerate project completion; timecost tradeoff; fixed variable and total costs; use of floats and cost optimization; project performance measures; project monitoring info and reports; project control process; **Gant chart and control chart**; cost-schedule S-graph; planned cost of work schedule (PV),

### Unit-IV

**Project organization, culture and leadership: projects within functional organization; dedicated project/ task-force teams; staff, matrix and network organization; choosing appropriate project organization; Organization culture; ten characteristics; cultural dimensions supportive to projects; social network and management by wandering around (MBWA); different traits of a manager and leader; managing project teams; five stage team development model;**

### Unit-IV

Strategic planning and project appraisal: Capital allocation key criteria; Porters competitive strategy model; BCG matrix; Strategic Position Action Evaluation (SPACE); time value of money; cash flows; payback period; IRR; cost of capital; NPV; social cost benefit analysis; UNIDO approach; project risks and financing.

## MEC-706 (B) – FLEXIBLE MANUFACTURING SYSTEMS

### Unit-I

Review of Computer Aided Design and Drafting (CADD): The design processes, advantages and applications of CAD, computer hardware system, computer programming languages, model storage and data structure, CADD software packages – AutoCAD, orthographic projections. CAD/CAM Interface and Product Design: Rationale for CAD/CAM,

### Unit-II

Computer Aided Manufacturing, Elements of CAM Systems, NC in CAM, Product Design and Development. Integrated Manufacturing Systems: (FMS) (CIMS): Components of FMS, components of CIMS, applications. Hardware and software pertaining to FMS installations.

### Unit-III

Machine Tool Control: Elements of the NC Systems, Types of Control Systems, NC Part Programming, Computer Aided Part Programming, Machining Centers. Manufacturing Systems and Automation:

### Unit-IV

Trends in Manufacturing Systems, system Defined, Classification of Manufacturing Systems, Leveling and balancing the manufacturing Systems, Robotics and Automated Guided Vehicles: Definition Robotics, Terminology, Types of Robots, basic robot motion and their control, robot programming,

### Unit-V

Automated Guided Vehicles. Typical applications in manufacturing like in welding, assembly, material handling, spray painting etc., Group Technology (G T): Part families, parts classification, machine group/cell, CAD/CAM and GT, applications. Flexible Manufacturing Systems and Computer

## MEC-706 (C) TECHNOLOGY ENTREPRENEURSHIP

### Unit-I

The Entrepreneurial Perspective Introduction to entrepreneurship, need and importance of entrepreneurship, charms of becoming entrepreneur, evolution of entrepreneurship, characteristics of an entrepreneur, barriers of entrepreneurship, achievement motivation to become entrepreneur, creativity & innovation, decision making and other behavioral aspects of entrepreneurship,

### Unit-II

Opportunity Recognition and Planning to establish SSI Opportunity identification process, opportunity evaluation process, market research, market survey, Identification of relevant resources, Steps in establishing an enterprise / industry, procedure and formalities to establish a SSI or business enterprise, Incentives and benefits available to SSI units and new entrepreneurs,

### Unit-III

Information about various support agencies. Formulation of Business Plan Preparation of market survey report, techno economic feasibility assessment, preparation of preliminary and detailed business plan.

### Unit-IV

Marketing Management Marketing and sales management demand forecasting, advertising, product mix, characteristics of a good sales person, Govt support in marketing, Financial Management of small scale industries Sources of finance, Debt financing, Venture capital sources,

### Unit-V

Lease finance, Banking policies & incentives available to entrepreneurs, Loanstypes and benefits, Book keeping and accountancy, working capital management, various financial ratios, Costing, Break-Even-Analysis

### References:-

1. Managing innovation and entrepreneurship in technology-based firms Martin, Michael J.C
2. Technological entrepreneurship: enterprise formation, financing and growth Cardullo, Mario W.
3. Growing new ventures, creating new jobs Rice, Mark P

## MEC-707 Industrial Training -II

Duration:- 2 weeks after the VI semester in the summer break, Assessment in VII semester.  
Students must observe following to enrich their learning during industrial training:

- Industrial environment and work culture.
- Organizational structure and inter personal communication.
- Machines/ equipment/ instruments - their working and specifications.
- Product development procedures and phases.
- Project planning, monitoring and control.

 Several handwritten signatures in blue ink are present, along with a small green mark.

## MEC-801 MACHINE DESIGN

**Unit I Design of Belt, Rope and Chain Drives:** Methods of power transmission, selection and design of flat belt and pulley; Selection of V-belts and sleeve design; Design of chain drives, roller chain and its selection; Rope drives, design of rope drives, hoist ropes.

**Unit II Spur and Helical Gears:** Force analysis of gear tooth, modes of failure, beam strength, Lewis equation, form factor, formative gear and virtual number of teeth; Gear materials; Surface strength and wear of teeth; strength against wear; Design of straight tooth spur and Helical Gears.

**Bevel Gears:** Application of bevel, formative gear and virtual number of teeth; Force analysis; Lewis equation for bevel gears; Strength against wear; Design of bevel gear.

**Unit III Design of I.C. Engine Components:** General design considerations in I C engines; design of cylinder; design of piston and piston-rings; design of connecting rod; design of crankshaft.

**Unit IV Design of Miscellaneous Components:** design of Flanged coupling; Rigid coupling, Design of Pressure vessels subjects to internal pressure, external pressure, design of penetration, design of flanges, cone cylinder junctions ,Materials, Fabrication.

**Unit V Optimization:** Basic concept of optimization, classification of optimization, optimization techniques, engineering applications of optimization. Classical optimization techniques: unconstrained optimization single-variable optimization, multivariable optimization, solution by direct search method, solution by Lagrange-multipliers method.

**Note: PSG Design data book and/ or Mahadevan and Reddy's Mechanical design data book are to be provided/ permitted in exam hall (duly verified by authority).**

## MEC-802 REFRIGERATION & AIR CONDITIONING

**Unit-I Introduction:** Principles and methods of refrigeration, freezing; mixture cooling by gas reversible expansion, throttling, evaporation, Joule Thomson effect and reverse Carnot cycle; unit of refrigeration, coefficient of performance, vortex tube & thermoelectric refrigeration, adiabatic demagnetization; air refrigeration cycles- Joule's cycle Boot-strap cycle, reduced ambient cycle and regenerative cooling cycles.

**Unit-II Vapour compression system:** Vapor compression cycle, p-h and t-s diagrams, deviations from theoretical cycle, sub-cooling and super heating, effects of condenser and evaporator pressure on cop; multi-pressure system: removal of flash gas, multiple expansion & compression with flash inter cooling; low temperature refrigeration: production of low temperatures, cascade system, dry ice, production of dry ice, air liquefaction system,.

**Unit-III** (a) Vapour absorption system: Theoretical and practical systems such as aqua- ammonia, electroflux & other systems; (b) Steam jet refrigeration: Principles and working, simple cycle of operation, description and working of simple system, (c) refrigerants: nomenclature & classification, desirable properties, common refrigeration, comparative study, leak detection methods, environment friendly refrigerants and refrigerant mixtures, brine and its properties

**Unit-IV Psychrometric:** Calculation of psychrometric properties of air by table and charts; psychrometric processes: sensible heating and cooling, evaporative cooling, cooling and dehumidification, heating and humidification, mixing of air stream, sensible heat factor; principle of air conditioning, requirements of comfort air conditioning, ventilation standards, infiltrated air load, fresh air load human comfort, effective temperature & chart, heat production & regulation of human body,

**Unit-V Air conditioning loads:** calculation of summer & winter air conditioning load, bypass factor of coil, calculation of supply air rate & its condition, room sensible heat factor, grand sensible heat factor, effective sensible heat factor, dehumidified air quantity. Problems on cooling load calculation. Air distribution and ventilation systems

## MEC-803 (A) COMPUTER AIDED MANUFACTURING

**Unit I Introduction C. N.C. System** : Definition, applications, Historical background Role of Computers in Manufacturing. Computer Numerical control in CAM: Definition, basic components of CAM system, Procedure, Co-ordinate system, motion control systems, Advantages of CNC system;

**Unit II Introduction of CNC Machine tools, Application of CNC systems**, Economics of CNC machining centers, Part Programming : CNC part programming : manual part programming,

**Unit III Introduction** computer aided part programming Robot Technology: Introduction, **Industrial Robots**, Robot physical Configuration, Basic Robot motions, Technical features, such as work volume, precision of movement speed o movement, weight carrying capacity, type of drive systems, **Programming of the robot**, Introduction to robot languages, End erectors, work cell control and interlocks, Robotic sensors, Robot applications & economics, Intelligent robots, interfacing of a vision system with a Robot,

**Unit IV Introduction** Definition and broad characteristics of Flexible Manufacturing Cells, , Group technology Systems FMS **hardware CNC** machines tools, robots, AGVs, ASRs, Inspection and Cleaning stations - Control aspects of FMS-DNC of machine tools, cutting tools, Types of Flexibility in FMS, Flexible and Dynamic Manufacturing Systems, Computer Aided Inspection:

**Unit V Introduction** Principles and interfacing, software metrology. **Applications of Lasers in precision measurements** - Laser interferometer, speckle measurements, laser scanners. Coordinate Measuring Machine - Types of CMM - Probes used - Applications - Non contact CMM using Electro optical sensors for dimensional metrology - Non contact sensors for surface finish measurements. Image processing and its application in inspection.

## MEC- 803(B) QUALITY MANAGEMENT & CONTROL

### UNIT-I

**INTRODUCTION:** Basic concepts, definitions and history of quality control. Quality function and concept of quality cycle. Quality policy and objectives. Economics of quality and measurement of the cost of quality. Quality considerations in design. Process control: Machine and process capability analysis. Use of control charts and process engineering techniques for implementing the quality plan. Acceptance Sampling: single, double and multiple sampling, lot quality protection, features and types of acceptance sampling tables.

### UNIT-II

**MANAGEMENT DURATION AND CONTROL:** Importance and options to accelerate project completion; time cost tradeoff; fixed variable and total costs; use of floats and cost optimization; project performance measures; project monitoring info and reports; project control process; Gant chart and control chart cost-schedule S-graph; planned cost of work schedule (PV), budgeted/ earned cost of work (EV) and actual cost of work completed (AC).

### UNIT-III

**QUALITY ORGANIZATION, CULTURE AND LEADERSHIP:** projects within functional organization; dedicated project/ task-force teams; staff, matrix and network organization;; Organization culture; ten characteristics; cultural dimensions supportive to projects; social network and management by wandering around (MBWA);; five stage team development model; shared vision; conflicts; rewards; rejuvenating project teams; project stakeholders; concept of project partnering.

### UNIT-IV

**STRATEGIC PLANNING AND PROJECT APPRAISAL:** Capital allocation key criteria; Porters competitive strategy model; BCG matrix; Strategic Position Action Evaluation (SPACE); time value of money; cash flows; payback period; IRR; cost of capital; NPV; social cost benefit analysis; UNIDO approach; project risks and financing.

### UNIT-V

**DEFECT DIAGNOSIS AND PREVENTION:** Basic causes of failure, curve/control of failure. MTBF. Maintainability, Condition monitoring and diagnostic techniques. different traits of a manager and leader; managing project teams, choosing appropriate project organization.

## MEC-803( C) SOLAR ENERGY UTILISATION

### UNIT-I

Energy resources and their utilization: Indian and global energy sources, Energy exploited, Energy planning, Energy Parameters (energy intensity, energy-GDP elasticity), Introduction to various sources of energy, Solar thermal, Photovoltaic, Water power, Wind energy, Biomass, Ocean thermal, Tidal and wave energy, Geothermal energy, Hydrogen energy systems, Fuel cells, Decentralized and dispersed generation.

### UNIT-II

Solar radiations: Extra terrestrial radiation, Spectral distribution, Solar constant, Solar radiations on earth, Measurement of solar radiations, Solar radiation geometry, Flux on a plane surface, Latitude, Declination angle, Surface azimuth angle, Hour angle, Zenith angle, Solar altitude angle expression for angle between incident beam and the normal to a plane surface (no derivation), Local apparent time, Apparent motion of sun, Day length, Solar radiation data for India.

### UNIT-III

**Solar energy:** Radiation, flat plate and concentrating collectors, fluid flow and heat transfer analysis, estimation of solar radiation, Active systems, solar pond, passive space conditioning, power generation, photovoltaic's. Principles and applications of wave energy, tidal energy, biomass energy, OTEC and Geothermal energy. MHD Engineering, Fuel Cells. Wind Energy potentials.

### UNIT-IV

**Solar Photovoltaic:** Principle of photovoltaic conversion of solar energy, types of solar cells and fabrication. Photovoltaic applications: battery charger, domestic lighting, street lighting, water pumping, power generation schemes.

### UNIT-V

Other **Non- Conventional energy sources:** Geothermal energy – Introduction, Types of geothermal resources, Methods of Harnessing. Energy from oceans – wave energy, energy conversion devices, tidal energy- Types of tidal power plants, ocean thermal energy – Introduction, open & closed systems.

## MEC-804 (A) – TOOLS DESIGN AND MACHINE TOOLS

**Unit I** Basic Features and Kinematics of Machine Tools: Features of basic machine tools; construction and operation, types of machine tools, machine tools motions, transmission-rotation in to rotation, rotation in to translation, kinematic-structures of machine tools: elementary, complex and compound structure, kinematic-features of gear shapers and gear hobbing machine.

**Unit II** Regulation of Speed: Design of gear boxes- need for variation of speed, selection of speed range, laws of stepped regulation, standardization of speeds, speed diagram, analysis of productivity loss, kinematic advantage of GP, structural diagrams, ray diagram and speed chart. Gear Drives: Belt and cone pulley, slip gear type, north gear drive, draw key gear drive, clutch type, mechanical step less drives, electrical drives; hydraulic drive.

**Unit III** Design of Metal working Tools: Design of press working tools, shearing, piercing, blanking, dies, compound die design principles for forging dies, bending, forming drawing dies, tooling for forging - design principles for forging dies, drop forging, upset forging, design principles and practice for rolling, roll press design.

**Unit IV** Design of Jigs and Fixtures: Principles of location, locating method and devices, principles of clamping, clamping devices, drilling jigs, types, drill bushes, fixture and economics, types of fixture, milling, grinding, broaching, assembly fixtures indexing jig and fixtures, indexing devices.

**Unit V** Design of Gauges and Inspection Features: Design of gauges for tolerance for dimensions and form inspection; dies and mould design for Ppastics & rubber parts: compression molding, transfer molding, blow molding.

## MEC-804(B) WIND ENERGY TECHNOLOGY

**Unit-I** Historical perspective, latest developments, state of art of wind energy technology, turbine rating, cost of energy, wind power plant economics, installation and operation costs, decommissioning, national scenario and worldwide developments, present status and future trends.

**Unit -II** Nature of atmospheric winds; wind resource characteristics and assessment; anemometry; wind statistics; speed frequency distribution, effect of height, wind rose, Weibull distribution, atmospheric turbulence, gust wind speed, effect of topography. Aerodynamics of air of oil; lift; drag; stall; effect of Reynold's number; actuator disc; momentum theory and Betz coefficient; design of wind turbine blade;

**Unit -III** design characteristics, multiple stream tube theory, vortex wake structure; tip losses; rotational sampling, wind turbine design programs, aerodynamic loads, tower shadow, wind shear, blade coning, gyroscopic, transient Aerodynamic damping and stability, teetering motion, stiff and soft towers.

**Unit- IV** Power train dynamics, design standards. Innovative designs and recent advances in wind energy conversion systems. Pitch control, yaw control, aerodynamic braking, teeter mechanism. Wind turbine dynamics with DC and AC generators: induction and synchronous generators, permanent magnet generator,

**Unit -V** Wind farm electrical design, Planning of wind farms, special application for developing countries, maintenance and operation, wind farm management, site selection. Environmental assessment; noise emission, visual impact, avian mortality, telecommunication interference etc. Instrumentation, data loggers, remote monitoring and control. Remote sensing applications like SODAR, LIDAR, SAR etc.

## MEC-804(C) TOTAL QUALITY MANAGEMENT

**Unit-I** Introduction to TQM, Importance of TQM in manufacturing and service industry, Basic approach of TQM, Concept of Quality Circle, Tools and system for quality management Just in time(JIT) production system, quality production through JIT and Kanban,

**Unit-II** Focus on total customer satisfaction Development of process Failure Mode & Effect Analysis (FMEA), Falt Tree analysis (FTA) Implementation and need for ISO 9000- ISO 9000-2000 Quality System – Elements, Documentation, Quality auditing- QS 9000 Quality system Strategic Quality Planning Case studies of TQM STATISTICAL QUALITY CONTROL (SQC)

**Unit-III** **STATISTICAL QUALITY CONTROL (SQC)** Introduction to Quality Control, Fundamentals of statistical concepts and techniques in quality control and improvement, graphical methods and data representation. Statistical process control using control charts, Control charts for variables and attributes, Process capability analysis. Acceptance sampling plans for attributes and variables,

**Unit-IV** Operating characteristic curves, A & L system for Lot by Lot acceptance sampling, Sampling plans, MILSTD411, Dodge -Romig sampling plans, LTPD, AOQL. Chain sampling, Continuous sampling, Skip lot,

**Unit-V** Economic design of sampling plans. Life testing, Life cycle curve and probability distributions in modelling reliability, system reliability. **Experimental Design and Taguchi Methods**, Factorial designs, Signal to noise ratio, Taguchi definition of Quality

## MEC -805 (A) INDUSTRIAL ORGANISATION & MANAGEMENT

**Unit-I** Industrial Evolution in India: Downfall of early industries, evolution of modern industry, effects of partition, industrial policy and progress after independence. Forms of Industrial Organization: Single Proprietorship, Partnership, Joint Stock companies., Cooperatives and State Enterprises.

**Unit-II** Growth of Industry and Management: Meaning of industrial management, **functions and tools of management**, growth of management concepts. **Principles of Management: Management, different functions of management**: Planning, organizing, coordination and control., Structure of an industrial organization.,

**Unit-III** Functions of different departments. Relationship between individual departments. Human and Industrial Relations, Human relations and performance in organization. Understand self and others for effective behavior, Behaviour modification techniques, Industrial relations and disputes, Relations with subordinates, peers and superiors, Characteristics of group behaviour and trade unionism.

**Unit-IV** Professional Ethics: Concept of ethics, Concept of professionalism, Need for professional ethics. Code of professional ethics, Typical problems of professional engineers, Professional bodies and their role.. Motivation: Factors determining motivation, Characteristics of motivation, Methods for improving motivation, Incentives, pay, promotion, rewards, Job satisfaction and job enrichment.

**Unit-V** **Leadership**: Need for leadership, Functions of a leader, Factors for accomplishing effective leadership, Manager as a leader. Human Resource Development: Introduction, Staff development and career development, Training strategies and methods. **Accidents and Safety**: Classification of accidents; according to nature of injuries i.e. fatal, temporary; according to event and according to place

## MEC-805(B) COMPOSITE MATERIALS

**Unit-I** Introduction, definition and classification of composite materials, Types of reinforcements, Types of Matrix, Interface, Wettability, Polymer and Metal matrix composites: Types, lamina, laminate, orthotropy, anisotropy in composites, Processing of Composites:

**Unit-II** Primary and Secondary Manufacturing- Lay-up, Autoclave Molding, Filament Winding, Pultrusion, Compression Molding, RTM and RIM, Interface and Applications. Introduction of ceramic matrix composites, Nano-composites. Micromechanics of composites, Density of composites,

**Unit-III** Predication of elastic constants, strength and stiffness, Load transfer in fiber and particulate reinforced composites, Macromechanics of composites, Elastic constants of an isotropic material and a lamina,

**Unit-IV** Analysis of laminated composites, Constitutive classical laminate theory, Stress and strain in laminate composites, Tensile and compressive strength of unidirectional fiber composites,

**Unit-V** Introduction to fracture mechanics, failure mechanics and crack propagation in composites, Design consideration for composite materials, Performance of composite under fatigue and impact loading.

## MEC-805( C) COMPUTATIONAL FLUID DYNAMICS

**Unit-I** Introduction: Mathematical Background: Classification of differential equations, representative differential equations for heat transfer and fluid flow; Boundary and initial condition; Integral forms. Survey of Numerical Methods Used in Heat Transfer and Fluid Mechanics

**Unit-II** Finite Difference Methods Basic concepts, Direct approximation approach, Taylor series, Control Volume approach, Truncation error, Discretization and round off errors; convergence, numerical stability, Solution of simultaneous equations, Transient diffusion. Finite Element Methods: Steps for FEM solution, Fundamentals, Assembly, Steady Diffusion, Transient Diffusion Finite Volume Methods: Problem formulation for one-dimensional convection diffusion equations.

**Unit- III** Simulation of Transport Process Conduction Heat Transfer: Steady and unsteady state one & two dimensional problems. Explicit, Implicit and Crank-Nicolson scheme, ADI and ADE methods. Convection Heat Transfer: Boundary Layer Flows, Similarity solutions, Derived Variables, Patankar/Spalding Methods for two-dimensional flows.

**Unit- IV** Elliptic Solutions: Control Volume formulation. Energy and other scalar equations, Momentum equations, Segregated Solution method; SIMPLE & SIMPLER schemes, Stream Function – Vorticity

**Unit-V** Transport method. Turbulence: Examples of turbulent flows, Stress relations, Reynolds stresses, turbulence model computations, Analogy between Heat Transfer and Momentum, Linearization of source terms.

## MEC - 806 Industrial Training Project - II

### Objectives of the course Industrial Training Project - II

To provide students with a comprehensive experience for applying the knowledge gained so far by studying various courses. To develop an inquiring aptitude and build confidence among students by working on solutions of small industrial problems. To give students an opportunity to do something creative and to assimilate real life work situation in institution. To adapt students for latest development and to handle independently new situations. To develop good expressions power and presentation abilities in students.

The focus of the Major Project is on preparing a working system or some design or understanding of a complex system using system analysis tools and submit it the same in the form of a write up i.e. detail project report. The student should select some real life problems for their project and maintain proper documentation of different stages of project such as need analysis market analysis, concept evaluation, requirement specification, objectives, work plan, analysis, design, implementation and test plan. Each student is required to prepare a project report and present the same at the final examination with a demonstration of the working system (if any)

**Working schedule** The faculty and student should work according to following schedule:

Each student undertakes substantial and individual project in an approved area of the subject and supervised by a member of staff. The student must submit outline and action plan for the project execution (time schedule) and the same be approved by the concerned faculty.

Action plan for Major Project work and its evaluation scheme #(Suggestive)

Task/Process	Week	Evaluation	Marks For Term Work#
Orientation of students by HOD/Project Guide	1 <sup>st</sup>	-	-
Literature survey and resource collection	2 <sup>nd</sup>	-	-
Selection and finalization of topic before a committee*	3 <sup>rd</sup>	Seminar-I	10
Detailing and preparation of Project (Modeling, Analysis and Design of Project Work	4th to 5th	-	10
Development stage			
Testing, improvements, quality control of Project	6th to 10th 11 <sup>th</sup>	-	25
Acceptance testing	12 <sup>th</sup>	-	10

Registrar  
Satya Sai University of Technology  
& Medical Sciences Sehore (M.P.)

Report Writing	13th to 15th	-	15
Presentation before a committee (including user manual, if any)	16th	- Seminar-II	30

\* Committee comprises of HOD, all project supervisions including external guide from industry (if any)

# The above marking scheme is suggestive, it can be changed to alternative scheme depending on the type of project, but the alternative scheme should be prepared in advance while finalizing the topic of project before a committee and explained to the concerned student as well.

NOTE: At every stage of action plan, students must submit a write up to the concerned guide.

The image shows several handwritten signatures in blue ink. One signature is accompanied by a green squiggly mark. In the center is a circular purple stamp with the text "Sree Saiya Sai University of Technology & Medical Sciences, Sehore (M.P.)" around the perimeter.

A handwritten signature in blue ink, likely belonging to the Registrar.

Name of Faculty: **School of Engineering**

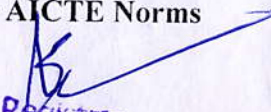

Minutes of Board of Studies Committee Meeting held on Dated **11/06/2018**

The Board of Studies Committee Meeting was held in the Board Room at **2:30 PM.** on **11/06/2018.** Following members were present.

1. Dr. G.R.Selokar, Professor (Mechanical), Chairman
2. Dr. Sanjay Rathore, Professor (Physics), Member
3. Mr. Vijay Prakash Singh, Associate Professor (Electronics and Communication), Member
4. Dr. Ajay Swarup Associate Professor (Civil Engineering), Member
5. Mr. Sanjay Kalraiya, Associate Professor (Mechanical Engineering), Member
6. Dr. Prabodh Khampariya, Associate Professor (Electrical and Electronics Engineering), Member
7. Mr. Kailash patidar , Assistant Professor (Computer Science and Engineering), Member
8. Ms. Alka Thakur, Associate Professor (Electrical Engineering), Member
9. Mr. Anil Verma, Assistant Professor (Mechanical Engineering), Member
10. Mr. Manoj Kumar Gandwane, Assistant Professor (Chemical Engineering), Member
11. Mr. Prashant Singh, Assistant Professor (Aeronautical Engineering), Member
12. Mr. Devendra Patle, Assistant Professor (Electronics and Communication), Member

All the member elected Dr. G.R.Selokar chairman for today's Board of Studies Meeting The Chairman welcomed the members of all department of SOE and appreciated the efforts put up by the faculty for progress of the departmental activities. The following Agenda points were discussed.

**Agenda: - Preparation of Syllabus and Scheme for BE First Year. As Per AICTE Norms**

  
Registrar  
Sri Satya Sai University of Technology  
& Medical Sciences Sehore (M.P.)

**Discussion:**

Committee member discussed the first (I) and second (II) Semester scheme and syllabus. It is decided that first year scheme should be applicable in group manner that is I Semester for Group A (July to December) and II Semester for Group B (July to December) student similarly for January to June session that is II nd Semester for group A and first Semester for group B

Scheme and syllabus was put up before the committee members as per guidelines of ALCTE, It was discussed in detail and some modification was suggested. So as to finalized the scheme

**Resolution:**

It is unanimously resolved that scheme and syllabus prepared on the guideline of AICTE New Delhi may be applicable w.e.f 2018-2019

The Chairman thanks to the members for peaceful conduction of meeting.

**Signature of All members (Including Chairman)**

1. Dr. G.R.Selokar, Professor (Mechanical), Chairman 
2. Dr. Sanjay Rathore, Professor (Physics), Member 
3. Mr. Vijay Prakash Singh, Associate Professor (Electronics and Communication), Member 
4. Dr. Ajay Swarup Associate Professor (Civil Engineering), Member 
5. Mr. Sanjay Kalraiya, Associate Professor (Mechanical Engineering), Member 
6. Dr. Prabodh Khampariya, Associate Professor (Electrical and Electronics Engineering), Member 
7. Mr. Kailash patidar , Assistant Professor (Computer Science and Engineering), Member 
8. Ms. Alka Thakur, Associate Professor (Electrical Engineering), Member 
9. Mr. Anil Verma. Assistant Professor (Mechanical Engineering), Member 
10. Mr. Manoj Kumar Gandwane, Assistant Professor (Chemical Engineering), Member 
11. Mr. Prashant Singh, Assistant Professor (Aeronautical Engineering), Member 
12. Mr. Devendra Patle, Assistant Professor (Electronics and Communication), Member

Semester- I

BEBSC-101	Mathematics-I	3L:0T:0P	3 credits	3Hrs/Week
-----------	---------------	----------	-----------	-----------

**Course Preamble:**

The Preamble of this foundational course is to review mathematical concepts already learnt in higher secondary. This course will also introduce fundamentals of mathematical functions, derivatives and aspects of calculus to students. This course deep understanding of matrix, differential equations, Sequences and series, Vector Space as well as a strong sense of how useful the subject can be in other disciplines of learning.

**Course Outcome:-**

Course work is designed to provide students the opportunity to learn key concepts of mathematical functions, key concepts of matrix , Vector Spaces as well as fundamentals and applications of integral calculus.

**Unit-I**

**Calculus-**Rolle's theorem, Mean Value theorems, Expansion of functions by Mc. Laurin's and Taylor's for one variable; Taylor's theorem for function of two variables, Partial Differentiation, Maxima & Minima (two variables), Method of Lagrange's Multipliers.

(9 hours)

**Unit-II**

**Integral-**Definite Integral as a limit of a sum and Its application in summation of series; Beta and Gamma functions and their properties; Applications of definite integrals to evaluate surface areas, Multiple Integral, Change the order of the integration, Applications of multiple integral for calculating area and volumes of the curves.

(9 hours)

**Unit-III**

**Sequences and series-**Convergence of sequence and series, tests for convergence; Power series, Taylor's series, series for exponential, trigonometric and logarithm functions; Fourier series: Half range sine and cosine series, Parseval's theorem.

(10 hours)

**Unit-IV**

**Vector Spaces-** Vector Space, Vector Sub Space, Linear Combination of Vectors, Linearly Dependent, Linearly Independent, Basis of a Vector Space, Linear Transformations.

**Unit-V**

(9 hours)

*Handwritten notes and signatures:*  
Rampuri  
mc  
[Signature]  
[Signature]  
[Signature]  
[Signature]

**Matrices**-Rank of a Matrix, Solution of Simultaneous Linear Equations by Elementary Transformation, Consistency of Equation, Eigen Values and Eigen Vectors, Diagonalization of Matrices, Cayley-Hamilton theorem and its applications to find inverse.

(10 hours)

& Medical Sciences Sehore (M.P.)

BEBSC- 202	Engineering Physics	2L:1T:0P	3 credits	3Hrs/Week
------------	---------------------	----------	-----------	-----------

**Course Preamble:**

1. A comprehensive, high-quality education in the physical sciences
2. A flexible curriculum with multiple concentrations that allows students to tailor their education according to their specific interests
3. The opportunity to experience the excitement of scientific discovery through direct participation in faculty research
4. An increased awareness of the physical processes in the surrounding world
5. The essential knowledge and analytical, mathematical and computational tools with which to pursue post-graduate education in a variety of physics-related and other fields
6. The foundation and practical skillsets for eventual success in any of a broad array of careers
7. The motivation for a lifelong love of learning

**Course Outcome**

1. An ability to apply knowledge of mathematics, science, and engineering.
2. An ability to design and conduct experiments, as well as to analyze and interpret data.
3. An ability to design a system, component, or process to meet desired needs within realistic constraints.
4. An ability to function on multidisciplinary teams.
5. An ability to identify, formulate, and solve engineering problems.
6. An understanding of professional and ethical responsibility.
7. An ability to communicate effectively.
8. The broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context.
9. A recognition of the need for, and an ability to engage in life-long learning.
10. A knowledge of contemporary issues.
11. An ability to use the techniques, skills, and modern engineering tools necessary for engineering practice.

**Unit I**

**Relativistic Mechanics**-Frame of reference, Inertial & non-inertial frames, Galilean transformations, Michelson-Morley experiment, Postulates of special theory of relativity, Lorentz transformations, Length contraction, Time dilation, Velocity addition theorem, Variation of mass with velocity, Einstein's mass energy relation, Relativistic relation between energy and momentum, Massless particle.

(10 hours)

**Unit II**

**Solid state & Nuclear physics**-Free electron theory of metals, Qualitative discussion of Kronig-penny model and origin of energy bands. Intrinsic and Extrinsic Semiconductors. V-I Characteristics of PN junction diode, Zener diode, Hall-effect. Introduction to Nuclear Physics , Static properties of Nucleus, Nuclear liquid drop model, Nuclear Shell Model, Linear particle accelerator, Cyclotron, Betatron, Bainbridge mass spectrometer.

(10 hours)

**Unit III**

*[Handwritten signature]*

*[Handwritten signature]*

*[Handwritten signature]*

*[Handwritten signature]*

*[Handwritten signature]*  
Registrar

**Quantum Mechanics**-Introduction to Quantum mechanics, Wave particle duality, Matter waves, Particle velocity, Phase velocity, Group velocity and their relation. Heisenberg's Uncertainty Principle. Time-dependent and time-independent Schrodinger wave equation, Solution to stationary state Schrodinger wave equation for one-Dimensional particle in a box, Compton effect.

(10 hours)

#### Unit IV

**Wave Optics**-Interference Coherent sources, Interference in uniform and wedge shaped thin films, Newton's Rings and its applications. Fraunhofer diffraction at single slit and at double slit, Absent spectra, Diffraction grating, Spectra with grating, Dispersive power of grating, Rayleigh's criterion of resolution. Resolving power of grating and Prism.

(9 hours)

#### Unit V

**Fibre Optics & Lasers: Fibre Optics**-Introduction to fibre optics, Acceptance angle, Numerical aperture, Normalized frequency, Classification of fibre, Attenuation and Dispersion in optical fibres. **Laser**: Absorption of radiation, Spontaneous and stimulated emission of radiation, Einstein's coefficients, Population inversion, Various levels of Laser, Ruby Laser, He-Ne Laser, Laser applications.

(9 hours)

#### Reference Books: -

1. Concepts of Modern Physics - Arthur Beiser (Mc-Graw Hill)
2. Introduction to Special Theory of Relativity- Robert Resnick (Wiley)
3. Optics - Brijlal & Subramanian (S. Chand)
4. Engineering Physics: Theory and Practical- Katiyar and Pandey (Wiley India)
5. Applied Physics for Engineers- Neeraj Mehta (PHI Learning, New)
6. Engineering Physics-Malik HK and Singh AK (McGrawHill)

Registrar  
SA Satya Sai University of Technology  
& Medical Sciences Sehore (M.P.)

BTEESC-203	Basic Computer Engineering	3L:0T:0P	3 credits	3Hrs/Week
------------	----------------------------	----------	-----------	-----------

**Course Preamble:**

1. Successfully practice computer engineering to serve state and regional industries, government agencies, or national and international industries.
2. Work professionally in one or more of the following areas: computer hardware and software design, embedded systems, computer networks and security, system integration, and electronic design automation.
3. Achieve personal and professional success with awareness and commitment to their ethical and social responsibilities, both as individuals and in team environments.
4. Maintain and improve their technical competence through lifelong learning, including entering and succeeding in an advanced degree program in a field such as engineering, science, or business.

**Course Outcome**

1. An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics
2. an ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors
3. an ability to communicate effectively with a range of audiences
4. an ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.

**Unit –I**

Computer-Definition, Classification, Organization i.e. CPU, register, Memory & Storage Systems, I/O Devices, and System & Application Software. Computer application E-Business, Bio-Informatics, health Care, Remote Sensing & GIS, Meteorology and, Computer Gaming, Multimedia and Animation etc.

(9 hours)

**Unit –II**

Introduction to Algorithms-Complexities and Flowchart, Introduction to Programming, Categories of Programming Languages, Program Design, Programming Paradigms, Characteristics or Concepts of OOP, Procedure Oriented Programming VS object oriented Programming. Introduction to C, Character Set, Tokens, Precedence and Associativity, Program Structure, Data Types, Variables, Operators, Expressions, Statements and control structures, I/O operations, Array, Functions.

### Unit – III

**Computer System Overview**-Basic Elements, Instruction Execution, Interrupts, Memory Hierarchy, Cache Memory, Direct Memory Access, Multiprocessor and Multicore Organization. Operating system overview- Preambles and functions, Evolution of Operating System. - Computer System Organization- Operating System Structure and Operations- System Calls, System Programs, OS Generation and System Boot.

(9 hours)

### Unit IV

**Computer Networking**-Introduction, Goals, OSI Model, Functions of Different Layers. Internetworking Concepts, Devices, TCP/IP Model. Topology, Introduction to Internet, World Wide Web, E-commerce Computer Security Basics: Introduction to viruses, worms, malware, Trojans, Spyware and Anti-Spyware Software, Different types of attacks like Money Laundering, Information Theft, Cyber Pornography, Email spoofing, Denial of Service (DoS), Cyber Stalking, Logic bombs, Hacking Spaming, Cyber Defamation, Security measures Firewall.

### Unit V

**Data base Management System**-Introduction, File oriented approach and Database approach, Data Models, Architecture of Database System, Data independence, Data dictionary, DBA, Primary Key, Data definition language and Manipulation Languages. Cloud computing: definition, cloud infrastructure, cloud segments or service delivery models (IaaS, PaaS and SaaS), cloud deployment models/ types of cloud (public' private, community and hybrid clouds), Pros and Cons of cloud computing.

(10 hours)

### Reference books:

1. Introduction of computers: Peter Norton, TMH
2. Object oriented programming with c++ :E.Balaguruswamy, TMH
3. Object oriented programming in C++: Rajesh k.shukla ,Wiley India
4. Computer network: Andrew Tananbaum,PHI
5. Data base management system,Korth,TMH
6. Operating system-silberschatz and Galvin-Wiley India

BTEESC-203	Basic Computer Engineering	0L:0T:1P	1 credits	2Hrs/Week
------------	----------------------------	----------	-----------	-----------

**List of Experiment:-**

1. To Study of input and output devices of computer systems .
2. Write a program of addition, subtract, multiplication and division by using C.
3. Write a program to check weather a number is prime or not.
4. To Study of various types of Operating System.
5. To Study and practice of basic Linux commands-ls, cp, mv, rm, chmod kill, ps etc .
6. Design color coding of straight & crossover cable.
7. Installation of oracle 10g. Also create a employee table.

BEESC-204	Basic Mechanical Engineering	2L:0T:0P	2 credits	2Hrs/Week
-----------	------------------------------	----------	-----------	-----------

**Course Preamble:**

1. To provide a comprehensive knowledge of basic mechanical systems.
2. Basic concepts from mechanical engineering sciences,
3. Basic concepts I.C Engine
4. Modern engineering tools (machine-tools, laboratory instrumentation, Working principle of steam Engine ), and related subjects to design mechanical engineering components

**Course Outcome**

1. After successful completion of this course students will able to
2. To describe and use basic engineering concepts
3. principles and components of mechanical equipment
4. measuring & testing method of physical quantities
5. Assessment of boiler component.

**Unit I**

**Materials**-Classification of engineering material, Composition of Cast iron and Carbon steels, Iron Carbon diagram. Alloy steels their applications. Mechanical properties like strength, hardness, toughness ductility, brittleness , malleability etc. of materials , **Tensile test**- Stress-strain diagram of ductile and brittle materials.

(9 hours)

**Unit II**

**Measurement**-Concept of measurements, errors in measurement, Temperature, Pressure, Velocity, Flow strain, Force and torque measurement, **Vernier caliper**, Micrometer, Dial gauge, Slip gauge, Sine-bar and Combination set. Production Engineering: Elementary theoretical aspects of production processes like **casting, carpentry, welding etc** Introduction to **Lathe and Drilling machines and their various operations.**

(9 hours)

**Unit III**

**Fluids**-Fluid properties pressure, density and viscosity etc. Types of fluids , Newton's law of viscosity , Pascal's law, Bernoulli's equation for incompressible fluids, Only working principle of Hydraulic machines, pumps, turbines, Reciprocating pumps.

Registrar

Sri Satya Sai University of Technology  
& Medical Sciences Sahore (M P)

(9 hours)

**Unit IV**

**Thermodynamics**-Thermodynamic system, properties, state, process, Zeroth, First and second law of thermodynamics, thermodynamic processes at constant pressure, volume, enthalpy & entropy.

Handwritten signatures and initials in blue ink at the bottom of the page.

Steam Engineering: Classification and working of boilers, mountings and accessories of boilers, Efficiency and performance analysis, natural and artificial draught, steam properties, use of steam tables.

(10 hours)

### Unit V

**Reciprocating Machines**-Working principle of steam Engine, Carnot, Otto, Diesel and Dual cycles P-V & T-S diagrams and its efficiency, working of Two stroke & Four stroke Petrol & Diesel engines, Working principle of compressor

(9 hours)

BEESC-205	Basic Civil Engineering & Mechanics	3L:0T:0P	3 credits	3Hrs/Week
-----------	-------------------------------------	----------	-----------	-----------

**Course Preamble:**

The goal of this Engineering Mechanics course is to expose students to problems in mechanics as applied to plausibly real-world scenarios. Problems of particular types are explored in detail in the hopes that students will gain an inductive understanding of the underlying principles at work; students should then be able to recognize problems of this sort in real-world situations and respond accordingly.

The civil engineering program will serve Connecticut and the nation by providing a quality engineering education that enables students to enter a profession that can improve the civil infrastructure, and economic welfare. Our civil engineering program will maintain a strong emphasis on undergraduate education with the goal that our program will be recognized for quality instruction in civil engineering analysis and design

**Course Outcomes**

1. Demonstrate knowledge of various surveying methods.
2. Conduct a chain survey.
3. Conduct a compass survey.
4. Conduct levelling survey and be able to do RL calculations.
5. Demonstrate knowledge of properties of various building materials.
6. Draw free body diagrams and determine the resultant of forces and/or moments.
7. Determine the centroid and second moment of area of sections.
8. Apply laws of mechanics to determine efficiency of simple machines with consideration of friction.
9. Analyse statically determinate planar frames.

**Unit I**

**Building Materials & Construction**-Stones, bricks, cement, lime, timber-types, properties, test & uses, laboratory tests concrete and mortar Materials: Workability, Strength properties of Concrete, Nominal proportion of Concrete preparation of concrete, compaction, curing. Elements of Building Construction, Foundations conventional spread footings, RCC footings, brick masonry walls, plastering and pointing, floors, roofs, Doors, windows, lintels, staircases – types and their suitability.

(9 hours)

**Unit II**

**Surveying & Positioning**-Introduction to surveying Instruments – theodolites, plane tables and related devices. Electronic surveying instruments etc. Measurement of distances – conventional and EDM methods, measurement of directions by different methods, measurement of elevations by different methods, Reciprocal levelling.

Registrar  
 of State University of Technology  
 & Medical Sciences, Sebare (M.P.)

**Unit III**

**Basics of Engineering Mechanics covering-**Force Systems Basic concepts, Particle equilibrium in 2-D & 3-D; Rigid Body equilibrium; System of Forces, Coplanar Concurrent Forces, Components in Space – Resultant- Moment of Forces and its Application; Couples and Resultant of Force System, Equilibrium of System of Forces, Free body diagrams. Equations of Equilibrium of Coplanar Systems and Spatial Systems; Static Indeterminacy.

(9 hours)

#### Unit IV

**Centroid and Centre of Gravity covering-**Centroid of simple figures from first principle, centroid of composite sections; Centre of Gravity and its implications; Area moment of inertia Definition, Moment of inertia of plane sections from first principles, Theorems of moment of inertia, Moment of inertia of standard sections and composite sections; Mass moment inertia of circular plate, Cylinder, Cone, Sphere, Hook.

(9 hours)

#### Unit V

**Friction covering-**Types of friction, Limiting friction, Laws of Friction, Static and Dynamic Friction; Motion of Bodies, Basic Structural Analysis covering, Equilibrium in three dimensions; Method of Sections; Method of Joints; How to determine if a member is in tension or compression; Simple Trusses; Zero force members; Beams & types of beams; Frames.

(9 hours)

BEESC-205	Basic Civil Engineering & Mechanics	0L:0T:1P	1 credits	2Hrs/Week
-----------	-------------------------------------	----------	-----------	-----------

**List of Experiments:-**

1. To perform traverse surveying with prismatic compass, check for local attraction and determine corrected bearings and to balance the traverse by Bowditch's rule.
2. To perform leveling exercise by height of instrument of Rise and fall method.
3. To measure horizontal and vertical angles in the field by using Theodolite.
4. To determine (a) normal consistency (b) Initial and Final Setting time of a cement Sample.
5. To determine the workability of fresh concrete of given proportions by slump test or compaction factor test.
6. To determine the Compressive Strength of brick .
7. To determine particle size distribution and fineness modulus of course and fine Aggregate.
8. To verify the law of Triangle of forces and Lami's theorem.
9. To verify the law of parallelogram of forces.
10. To verify law of polygon of forces
11. To find the support reactions of a given truss and verify analytically.
12. To determine support reaction and shear force at a given section of a simply Supported beam and verify in analytically using parallel beam apparatus.
13. To determine the moment of inertia of fly wheel by falling weight method.
14. To verify bending moment at a given section of a simply supported beam.

BEHSMC-206	Language Lab and Seminar	0L:0T:1P	1 credits	2Hrs/Week
------------	--------------------------	----------	-----------	-----------

**Course Preamble:**

This course intends to impart practical training in the use of English Language for Communicative purposes and aims to develop students' personality through language Laboratory.

**Topics to be covered in the Language laboratory sessions:**

1. Introducing oneself, family, social roles.
1. Public Speaking and oral skills with emphasis on conversational practice, extempore speech, JAM(Just a minute sessions), describing objects and situations, giving directions, debate, telephonic etiquette.
2. Reading Comprehension: Intensive reading skills, rapid reading, and reading aloud (Reading material to be selected by the teacher).
3. To write a book review. Standard text must be selected by the teacher.
4. Role plays: preparation and delivery topic to be selected by teacher/faculty.

Handwritten signatures and a circular stamp. The stamp is purple and contains the text "S.S.U.T.M." and "SEHORE (M.P.)". There are several handwritten signatures in blue ink, including one that appears to be "Kampana" and another that is circled and reads "MKO".

BELC-107	Self-Study / GD Seminar	0L:0T:1P	1 credits	2Hrs/Week
----------	-------------------------	----------	-----------	-----------

**Course Preamble:**

To improve the mass communication and convincing / understanding skills of students and it is to give student an opportunity to exercise their rights to express themselves. Evaluation will be done by assigned faculty based on group discussion and power point presentation.

**Course Outcomes**

1. Analytical thinking
2. Lateral thinking
3. constructive argument
4. Communication skill
5. Presentation of views

Students will discuss the course related and interdisciplinary topics for problem solving. They will improve the mass communication and convincing / understanding skills about subject and their related problem in a group of students

BEBS-201	Mathematics-II	3L:0T:0P	3 credits	3Hrs/Week
----------	----------------	----------	-----------	-----------

**Course Preamble:**

1. To introduce the basic concepts required to understand, construct, solve and interpret differential equations.
2. To teach methods to solve differential equations of various types.
3. To give an ability to apply knowledge of mathematics on engineering problems

**Course Outcomes**

The students will be able to:

1. Classify differential equations according to certain features.
2. Solve first order linear equations and nonlinear equations of certain types and interpret the solutions.
3. Understand the conditions for the existence and uniqueness of solutions for linear differential equations
4. Solve second and higher order linear differential equations with constant coefficients and construct all solutions from the linearly independent solutions
5. Find series solutions about ordinary and regular singular points for second order linear differential equations.
6. Solve initial value problems using the Laplace transform.
7. Solve systems of linear differential equations with methods from linear algebra

**Unit - I**

**Ordinary Differential Equations I**-Differential Equations of First Order and First Degree (Leibnitz linear, Bernoulli's, Exact), Differential Equations of First Order and Higher Degree, Higher order differential equations with constants coefficients, Homogeneous Linear Differential equations, Simultaneous Differential Equations.

(9 hours)

**UNIT-II**

**Ordinary differential Equations II**-Second order linear differential equations with variable coefficients, Method of variation of parameters, Power series solutions; Legendre polynomials, Bessel functions of the first kind and their properties.

(9 hours)

**Unit III**

**Partial Differential Equations** -Formulation of Partial Differential equations, Linear and Non-Linear Partial Differential Equations, Homogeneous Linear Partial Differential Equations with Constants Coefficients.

(9 hours)

**Unit IV**

Registrar  
Sri Satya Sai University of Technology  
& Medical Sciences, Sehore (M.P.)

**Functions of Complex Variable**-Functions of Complex Variables: Analytic Functions, Harmonic Conjugate, Cauchy-Riemann Equations (without proof), Line Integral, theorem, Cauchy Integral formula (without proof), Singular Points, Poles & Residues, Residue Theorem, Application of Residues theorem for Evaluation of Real Integral.

(9 hours)

### Unit V

**Vector Calculus**- Differentiation of Vectors, Scalar and vector point function, Gradient, Geometrical meaning of gradient, Directional Derivative, Divergence and Curl, Line Integral, Surface Integral and Volume Integral, Gauss Divergence, Stokes and Green theorems.

(9 hours)

BEBSC-102	Engineering Chemistry	3L:0T:0P	3 credits	3Hrs/Week
-----------	-----------------------	----------	-----------	-----------

**Course Preamble:**

1. To acquire knowledge about hardness of water and importance of water in industrial purpose.
2. To understand the concept of molecular spectroscopy.
3. To gain the knowledge of about polymeric material and biodegradable substances.
4. To understand the mechanism of lubricant and properties of lubricant.

**Course Outcomes**

1. Develop innovative methods to produce soft water for industrial use.
2. Identify the structure of unknown / new compounds with the help of spectroscopy.
3. Substitute metal with conducting polymers and produce cheaper biodegradable polymers to reduce environmental pollution.
4. Apply their knowledge for use and protect to industrial and domestic equipment.

**UNIT-I**

**Atomic and molecular structure**-Schrodinger equation. Particle in a box solutions and their applications for conjugated molecules and nanoparticles. Molecular orbitals of diatomic molecules and plots of the multicentre orbitals. Equations for atomic and molecular orbitals. water treatment-Introduction, hardness of water, Units of hardness, disadvantage of hard water, scale and sludge formation in boilers, boilers troubles.

(9 hours)

**UNIT-II**

**Spectroscopic techniques and applications** -Principles of spectroscopy and selection rules. Electronic spectroscopy. Fluorescence and its applications in medicine. Vibrational and rotational spectroscopy of diatomic molecules. Applications. Nuclear magnetic resonance and magnetic resonance imaging, surface characterisation techniques. Diffraction and scattering.

(9 hours)

**UNIT-III**

**Intermolecular forces and potential energy surfaces**-Ionic, dipolar and van Der Waals interactions. Lubricant-Introduction, mechanism of lubricant, classification of lubricant, properties of lubricating oils.

(9 hours)

*Handwritten signatures and scribbles in the bottom left corner.*

*Handwritten signatures and scribbles in the bottom middle.*

Registrar

#### UNIT-IV

**Use of free energy in chemical equilibria**-Thermodynamic functions: energy, entropy and free energy. Estimations of entropy and free energies. Free energy and emf. Cell potentials, the Nernst equation and applications. High Polymers-Introduction, nomenclature, types of polymerization, classification of polymers, plastics-important, thermo-plastic resins and thermo setting resin.

(9 hours)

#### UNIT-V

**Periodic properties**-Effective nuclear charge, penetration of orbitals, variations of s, p, d and f orbital energies of atoms in the periodic table, electronic configurations, atomic and ionic sizes, ionization energies, electron affinity and electronegativity, polarizability, oxidation states, coordination numbers and geometries, hard soft acids and bases, molecular geometries.

BEBSC-102	Engineering Chemistry	0L:0T:1P	1 credits	2Hrs/Week
-----------	--------------------------	----------	-----------	-----------

**LIST OF EXPERIMENTS:**

1. Determination of surface tension and viscosity
2. Determination of chloride content of water
3. Determine the change of viscosity of given lubricating oil with change in temperature by Redwood Viscometer No. 1.
4. Determine the change of viscosity of given lubricating oil with change in temperature by Redwood Viscometer No. 2.
5. To determine the flash and fire point of given lubricating oil by Cleveland's open cup apparatus.
6. To determine the flash and fire point of given lubricating oil by Abel's closed cup apparatus.
7. To determine the flash and fire point of given lubricating oil by Pensky Marten's apparatus.
8. To determine the total hardness of given water sample by titrating it against EDTA solution using EBT as an indicator.

BEHSMC-103	English for Communication	3L:0T:0P	3 credits	3Hrs/Week
------------	---------------------------	----------	-----------	-----------

**Course Preamble:**

1. To enhance Professional competence in reading, writing, listening and speaking.
2. To modify the tactic of providing information about the language by using several techniques.
3. To minimize the Grammar Translation Method of ELT by replacing it with Direct Learning Method.
4. To Introduce Communicative Method of ELT and focusing the teaching pedagogy to the student-centered learning rather than the teacher-centered learning.
5. To develop the skills to master three major forms of communications which are vital in academic and professional settings namely professional presentations, interviews and group communications respectively.
6. To provide a deep insight of techniques for delivering effective presentations, appealing job interviews, and actively participating in various forms of group communication.

**Course Outcomes**

At the end of this course students will have:

1. Ability to design a language component or process to meet desired need within Realistic, Constraints such as economic, environmental, social, political, ethical Scenario.
2. Ability to analyze the usage of English words in different contexts.
3. An understanding of technical and academic articles' comprehension.
4. The ability to present oneself at multinational levels knowing the type of different Standards of English

**UNIT-I**

**Identifying Common errors in writing**-Articles, Subject-Verb Agreement, Prepositions, Active and Passive Voice, Reported Speech: Direct and Indirect, Sentence Structure

(9 hours)

**UNIT-II**

**Vocabulary building and Comprehension**-Acquaintance with prefixes and suffixes from foreign languages in English to form derivatives, synonyms, antonyms, Reading comprehension.

**UNIT-III**

Registrar

Sri Saiya Sai University of Technology  
& Medical Sciences Sionore (M.P.)

Handwritten signatures and initials in blue ink, including a large signature that appears to be 'Kampanth' and several other initials.

MISC

**Communication**-Introduction, Meaning and Significance, Process of Communication, Oral and Written Communication, 7 c's of Communication, Barriers to Communication and Ways to overcome them, Importance of Communication for Technical students, nonverbal communication.

(10 hours)

#### UNIT-IV

**Developing Writing Skills**-Planning, Drafting and Editing, Precise Writing, Précis, Technical definition and Technical description. Report Writing: Features of writing a good Report, Structure of a Formal Report, Report of Trouble, Laboratory Report, Progress Report.

(9 hours)

#### UNIT-V

**Business Correspondence**-Importance of Business Letters, Parts and Layout; Application, Contents of good Resume, guidelines for writing Resume, Calling/ Sending Quotation, Order, Complaint, E-mail and Tender.

(9 hours)

BEESC-104	Basic Electrical and Electronics Engineering	2L:0T:0P	2 credits	2Hrs/Week
-----------	--	----------	-----------	-----------

**Course Preamble:**

Impart a basic knowledge of electrical quantities such as current, voltage, power, energy and frequency to understand the impact of technology in a global and societal context and to provide students the working knowledge for the analysis of basic DC and AC circuits used in electrical and electronic devices. To impart basic knowledge of electronic devices and digital conversion.

**Course Outcomes**

1. To understand and analyze basic electric and magnetic circuits.
2. To study the working principles of electrical machines and power converters.
3. To introduce the components of low voltage electrical installations and safety devices.
4. To introduce with basic electronics devices and logic gates.

**Unit-I**

**Electrical circuit elements**-Electrical circuit elements (R, L and C); Concept of active and passive elements, voltage and current sources, concept of linearity and linear network, unilateral and bilateral elements, Kirchhoff's laws, Loop and-delta transformation, nodal methods, Superposition of a theorem, Thevenin theorem, Norton theorem.

(9 hours)

**Unit-II**

**AC Circuits**-Representation of Sinusoidal waveforms –Average and effective values, Form and peak factors, Concept of phasors, phasor representation of sinusoidally varying voltage and current. Analysis of single phase AC Circuits consisting of R, L, C, RL, RC, RLC combinations (Series and Parallel), Apparent, active & reactive power, Power factor, power factor improvement. Concept of Resonance in series & parallel circuits, bandwidth and quality factor. Three phase balanced circuits, voltage and current relations in star and delta connections.

(10 hours)

**Unit-III**

**Magnetic circuit**-Magnetic materials, BH characteristics, ideal and practical transformer, equivalent circuit, losses in transformers, regulation and efficiency. Auto-transformer and three-phase transformer connections.

**Components of LT Switchgear:** Switch Fuse Unit (SFU), MCB, ELCB, MCCB, Types of Wires and Cables, Importance of earthing, Types of Batteries, Important characteristics for Batteries. Elementary calculations for energy consumption and savings, battery backup.

(10 hours)

**Unit-IV**

**Digital Electronics**-Number systems used in digital electronics, decimal, binary, octal, hexadecimal, their complements, operation and conversion, floating point and signed numbers, Demorgan's

*Handwritten signatures and scribbles in blue ink.*

*Handwritten signature 'mkc' in blue ink.*

theorem, AND, OR, NOT, NOR, NAND, EX-NOR, EX-OR gates and their representation, truth table, half and full adder circuits, R -S flip flop, J-K flip flop.

(8 hours)

### Unit-V

**Electronic Components And Circuits**-Introduction to Semiconductors, Diodes, V -I characteristics, amplifiers,transistors,Bipolar junction transistors (BJT) and their working, introduction to CC, CB & CE transistor configurations, different configurations and modes of operation of BJT, DC biasing of BJT.

(8 hours)

BEESC-104	Basic Electrical and Electronics Engineering	0L:0T:1P	1 credits	2Hrs/Week
-----------	--	----------	-----------	-----------

**Laboratory objectives:**

1. Read and demonstrate the rating of basic equipments used in electrical engineering
2. Connections of different components as per the rules
3. Application different components in electrical field

**Laboratory Outcomes**

1. Get an exposure to common electrical components and their ratings.
2. Make electrical connections by wires of appropriate ratings.
3. Understand the usage of common electrical measuring instruments.
4. Understand the basic characteristics of transformers and electrical machines.

**List of Experiments: -**

1. Verification of Kirchhoff's laws
2. Verification of Superposition and Thevenin Theorem.
3. Measurement of power and power factor in a single phase ac series inductive circuit and study improvement of power factor using capacitor
4. To Study of phenomenon of resonance in RLC series circuit and obtain resonant frequency.
5. Connection and measurement of power consumption of a fluorescent lamp (tube light).
6. Measurement of power in 3- phase circuit by two wattmeter method and determination of its power factor for star as well as delta connected load.
7. Determination of parameters of ac single phase series RLC circuit
8. To observe the B-H loop of a ferromagnetic material in CRO.
9. Determination of (i) Voltage ratio (ii) polarity and (iii) efficiency by load test of a single phase transformer
10. Determination of efficiency of a dc shunt motor by load test
11. To study running and speed reversal of a three phase induction motor and record speed in both directions.
12. Demonstration of cut-out sections of machines: dc machine, three phase induction machine, single-phase induction machine and synchronous machine.
13. To study the V-I Characteristics of Transistors.
14. To study V-I characteristics of various Diodes.

BEESC-105	Engineering Graphics	3L:0T:0P	3 credits	3Hrs/Week
-----------	----------------------	----------	-----------	-----------

### Course Preamble:

1. Increase ability to communicate with people.
2. Learn to sketch and take field dimensions.
3. Learn to take data and transform it into graphic drawings.
4. Learn basic Auto Cad skills.
5. Learn basic engineering drawing formats.
6. Prepare the student for future Engineering positions.

### Course Outcomes

Student's ability to hand letter will improve.

1. Student's ability to perform basic sketching techniques will improve.
2. Students will be able to draw orthographic projections and sections.
3. Student's ability to use architectural and engineering scales will increase.
4. Students ability to produce engineered drawings will improve
5. Student's ability to convert sketches to engineered drawings will increase.
6. Students will become familiar with office practice and standards.
7. Students will become familiar with Auto Cad two dimensional drawings.
8. Students will develop good communication skills and team work.

### UNIT-I

**Introduction to Engineering Drawing**-Principles of Engineering Graphics and their significance, usage of Drawing instruments, Lettering, Conic sections including the Rectangular Hyperbola (General method only); Cycloid, Epicycloid, Hypocycloid and Involute; Scales -Plain, Diagonal and Venire Scales.

Registrar

(9 hours)

### UNIT-II

Sri Satya Sai University of Technology  
& Medical Sciences Sehore (M.P)

Orthographic Projections -Principles of Orthographic Projections-Conventions - Projections of Points and lines inclined to both planes. Projections of planes inclined Planes - Auxiliary Planes; Projections of

Regular Solids those inclined to both the Planes- Auxiliary Views: Draw simple annotation, dimensioning and scale.

(9 hours)

### UNIT-III

Sections and Sectional Views of Right Angular Solids-Prism, Cylinder, Pyramid, Cone -Auxiliary Views: Development of surfaces of Right Regular Solids - Prism, Pyramid, Cylinder and Cone; Draw the sectional orthographic views of geometrical solids, objects from industry and dwellings (foundation to slab only).

(9 hours)

### UNIT-IV

Isometric Projections-Principles of Isometric projection - Isometric Scale, Isometric Views, Conventions; Isometric Views of lines, Planes, Simple and compound Solids; Conversion of Isometric Views to Orthographic Views and Vice-versa, Conventions.

(8 hours)

### UNIT-V

Overview of Computer Graphics-Listing the computer technologies that impact on graphical communication, Demonstrating knowledge of the theory of CAD software [such as: The Menu System, Toolbars (Standard, Object Properties, Draw, Modify and Dimension), Objects, Isometric Views of lines, Planes, Simple and compound Solids; Customization & CAD Drawing consisting of set up of the drawing page and the printer, including scale settings, Setting up of Units and drawing limits; ISO and ANSI standards for coordinate dimensioning and tolerance.

BEESC-106	Manufacturing Practices	0L:0T:1P	1 credits	2Hrs/Week
-----------	-------------------------	----------	-----------	-----------

### Course Preamble:

1. To understand process of cutting shaping.
2. To understand working principles for various machining processes.
3. To understand construction, working and applications of various machine tools.
4. To learn basic set up, working and applications of a few important non conventional machining processes to get hand on experience on various machine tools.

### Course Outcomes

1. The students will be able to understand the details about machines used in production.
2. The students will be able to understand the mechanics behind metal cutting.
3. The students will be able to understand the finishing and super finishing processes.
4. The students will be able to understand the Physics of material removal behind the various non-conventional machining processes.

Manufacturing is fundamental to the development of any engineering product. The course on Engineering Workshop Practice is intended to expose engineering students to different types of manufacturing / fabrication processes, dealing with different materials such as metals, ceramics, plastics, wood, glass etc. While the actual practice of fabrication techniques is given more weightage, some lectures and video clips available on different methods of manufacturing are also included.

1. Manufacturing Methods- casting, forming, machining, joining, advanced manufacturing methods
2. CNC machining, Additive manufacturing
3. Fitting operations & power tools
4. Carpentry
5. Plastic molding, glass cutting
6. Metal casting
7. Welding (arc welding & gas welding), brazing

### List of Experiments:-

1. Carpentry Shop Experiment To Make a T-LAP joint with wood Pieces
2. Machine Shop Experiment To Perform Knurling on Iron Rod
3. WELDING SHOP ( LAP Joint ) , Tools, Accessories, Diagram And Explanation
4. SHEET METAL SHOP ( Square Tray ) , Parts, Accessories, Diagram And Explanation
5. FITTING SHOP ( Make a Joint ) , Parts, Accessories, Diagram And Explanation
6. CARPENTRY SHOP (T-Lap Joint) , Cutting Tools, Accessories, Diagram and Explanation
7. MACHINE SHOP ( the lathe machine) , Parts, Accessories, Diagram and Explanation

Minutes of Board of Studies Committee Meeting Dated on **04.06.2019**

The Board of Studies Committee Meeting was held in the room of Department of **Mechanical Engineering** at 2:30 PM. on **04.06.2019**, Following members were present.

1. Mrs. Priyanka Jhavar, Associate Prof. (Mechanical Engineering), Chairman
2. Dr. G. R. Selokar , Professor (Mechanical Engineering), Member
3. Mr. Sanjay Kalraiya, Associate Prof. (Mechanical Engineering), Member
4. Mr. Anil Verma , Asst. Prof. (Mechanical Engineering) – Member
5. Mr. Dhananjay Yadav, Asst. Prof. (Mechanical Engineering), Member
6. Mr. Sachin Baraskar , Asst. Prof. (Mechanical Engineering), Member
7. Mr. Omshankar Jhariya, Asst. Prof. (Mechanical Engineering), Member
8. Dr. A.C.Tiwari Professor RGPV Bhopal External Member
9. Dr. K. R. Aharwal Professor MANIT Bhopal External Member

The Chairman of Board of Studies Committee welcomes and appreciated the efforts put up by the faculty for progress of the departmental activities. The following Agenda points were discussed and resolved.

**Agenda Preparation of Scheme and syllabus for III and IV Sem.**

Discussion Scheme

  
Registrar  
Sri Satya Sai University of Technology  
& Medical Sciences Sehore (M.P.)

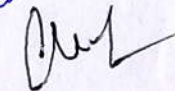

Scheme and syllabus was put up before the member as per AICTE guidelines, It was discussed in detail by the members and modification were suggested.

**Resolution of the Discussion:**

It was resolved that scheme and syllabus as proposed with modification may be accepted

The Chairman thanks the members for peaceful conduction of meeting.

**Signature of All members (Including Chairman)**

1. Mrs. Priyanka Jhavar, Associate Prof. (Mechanical Engineering), Chairman 
2. Dr. G. R. Selokar , Professor (Mechanical Engineering), Member 
3. Mr. Sanjay Kalraiya, Associate Prof. (Mechanical Engineering), Member

## SEMESTER –III

BEA-301	Mathematics-III	3L:0T:0P	3 credits	3Hrs/Week
---------	-----------------	----------	-----------	-----------

### Course Preamble:

To enable the students to apply the knowledge of Mathematics in various engineering fields by making them

1. To understand the method of solving algebraic, transcendental equations and to determine the approximate value of the derivative & definite integral for a given data using numerical techniques.
2. Able to expand the given periodic function defined in the given range in terms of sine and cosine multiple of terms as a Fourier series and to extremise the functional using integration technique and to solve the partial differential equation using different analytical techniques.

### Course outcomes

On completion of this course, students will be able to

1. Solve field problems in Engineering involving PDEs.
2. Use the root finding techniques to solve practical engineering problems.
3. To apply the concept of numerical analysis to find the relative strengths and weaknesses of each computation method and know which are most applicable for given problem.
4. To apply the analytical technique to express periodic function as a Fourier sine and cosine series.
5. Estimate Laplace and Fourier transform and z transform.

### Unit I

**Numerical Method**-Solution of polynomial and transcendental equations – Bisection method, Newton-Raphson method and Regula-Falsi method. Finite differences, Relation between operators, Interpolation using Newton's forward and backward difference formulae. Interpolation with unequal intervals: Newton's divided difference and Lagrange's formula.

(9 hours)

### Unit II

**Numerical Methods**-Numerical Differentiation, Numerical integration: Trapezoidal rule and Simpson's 1/3rd and 3/8 rules. Solution of Simultaneous Linear Algebraic Equations by Gauss's Elimination, Gauss's Jordan, Crout's methods, Jacobi's, Gauss-Seidal, and Relaxation method.

(9 hours)

### Unit III

**Numerical Methods**-Ordinary differential equations: Taylor's series, Euler and modified Euler's methods. RungeKutta method of fourth order for solving first and second order equations, Milne's and Adam's predictor-corrector methods. Partial differential equations: Finite difference solution two dimensional Laplace equation and Poission equation, Implicit and explicit methods for one dimensional

Registrar

& Medical Sciences Sehore (M.P)

47  
Sb

heat equation (Bender-Schmidt and Crank-Nicholson methods), Finite difference explicit method for wave equation.

(10 hours)

#### Unit IV

**Transform Calculus**-Laplace Transform, Properties of Laplace Transform, Laplace transform of periodic functions. Finding inverse Laplace transform by different methods, convolution theorem. Evaluation of integrals by Laplace transform, solving ODEs by Laplace Transform method, Fourier transforms.

(8 hours)

#### Unit V

**Concept of Probability**-Probability Mass function, Probability Density Function, Discrete Distribution: Binomial, Poisson's, Continuous Distribution: Normal Distribution, Exponential Distribution.

(8 hours)

MEA- 302	Thermodynamics	3L:1T:0P	4 credits	4Hrs/Week
----------	----------------	----------	-----------	-----------

**Course Preamble:**

1. Understand the applications of Engineering Thermodynamics in real life situations
2. Understand basics and use of various laws of Thermodynamics
3. Understand Vapor Power Cycles
4. Broaden the understanding of Steam Generators
5. Understanding the thermodynamics of Nozzles and Diffusers
6. Understanding the basics of Steam Turbines
7. Understanding the Steam Condensers Operations and uses

**Course Outcomes:**

By the end of the course the students shall be able to

1. Understand and can apply various laws of thermodynamics. He will be able to solve the problems related to various laws of thermodynamics
2. Understand Boilers function and its uses. He will be able to do boiler trail for preparing heat balance
3. Understand function, Types, utility of steam operated devices like nozzles, impulse turbine, reaction turbine and condenser. He will be able to calculate all thermodynamic quantities like work, efficiencies etc.

**UNIT-I**

Basic Concepts & Laws of Thermodynamics: Basic concepts Property, Equilibrium, State, Process, Cycle, Zeroth law of Thermodynamics, Heat and Work Transfer. First law of Thermodynamics- first law applied to various systems steady flow process, limitations of first law of Thermodynamics.

(9 hours)

**UNIT-II**

Second law of Thermodynamics, Heat Engine, Heat Reservoir, Refrigerator, Heat Pump, Carnot's Cycle, statements of second law Reversible and irreversible processes, consequence of second law, Clausius Inequality, Entropy, T-S diagrams, Available & Unavailable energy Availability Concept

(9 hours)

**UNIT-III**

Properties of Steam : Pure Substance, Phase, Phase-transformations, formation of steam, properties of steam, PVT surface, HS,TS,PV,PH,TV diagram, processes of vapor measurement of dryness fraction, Use of Steam Tables and Mollier chart.

(9 hours)

**UNIT-IV**

Air standard cycles: Carnot, Otto, Diesel, Dual cycles and their comparison, Brayton cycle, Non reactive gas mixture, PVT relationship, mixture of ideal gases, properties of mixture of ideal gases, internal energy, Enthalpy and specific heat of gas mixtures.

(9 hours)

Registrar

Sri Satya Sri University of Technology  
& Medical Sciences Sehore (M.P.)

49

## UNIT-V

Fuels & combustion : Actual & theoretical Combustion processes , Enthalpy of formation & enthalpy of reaction, first law analysis of reacting systems, Adiabatic flame temperature , Basic concept of Third Law of thermodynamics . Steam Tables, Mollier Charts & tables connected to reactive systems are allowed in Examination

(9 hours)

MEA- 303	Materials Technology	2L:0T: P	2credits	2Hrs/Week
----------	----------------------	----------	----------	-----------

**Course Preamble:**

1. Know different machine elements and mechanisms, composite material use instead of traditional heavy.
2. Understand Kinematics and Dynamics of different machines and mechanisms.
3. Select Suitable Drives and Mechanisms for a particular application.

**Course Outcomes:**

By the end of the course the students shall be able to

1. Familiarity with common mechanisms used in machines and everyday life.
2. Ability to calculate mobility (number of degrees-of- freedom) and enumerate rigid links and types of joints within mechanisms.
3. Ability to conduct a complete (translational and rotational) mechanism position analysis.

**UNIT-I**

Solidification of metals , Crystallization , Crystal and amorphous , different types of bonds in different metals, Crystallography. Stability and Meta stability of metals. Different mechanical properties of metals and other engineering materials like strength, hardness, elasticity, plasticity, Malleability, Ductility, Creep, Fatigue etc .Introduction to industrial metals, steels and prevailing manufacturing methods by manufacturers.

(9 hours)

**UNIT-II**

Cooling curves, Isomorphous, Utectic, Eutectoid , Eutectoid solid solution, Peritectic and other phase diagrams, Alloying , Characteristics of alloying elements, Iron – Carbon phase diagram, T-T-T diagrams, Types of Cast Iron. Types of Stainless Steels, Elastic, anelastic and Viscoelastic behaviour.

(9 hours)

**UNIT-III**

Heat treatment of metals, Based on phase diagram and T-T-T-Diagram the heat treatment of various metals. Bulk heat treatments, surface heat treatments, Case carburizing, Types of Annealing, Normalising, Spherodising, Phase Transformations like Pearlite, Cementite, Austenite, Troostite, Bainite, Hard and soft Martensite etc. Laser hardening, Cyniding, Boriding, Nitriding, Flame hardening, Ion implantation, Etc. Heat treatment cycles. Metallographic studies, Optical Microscope, Electron Microscope.

(9 hours)

**UNIT-IV**

Destructive and non-destructive testing methods, Tensile test, Compression test, shear test, bend test, Different types of Hardness tests, Impact tests, Fatigue tests, Hardenability test, Fracture analysis, NDT Methods. Different properties of Steels, Aluminium and it's alloys, Copper and it's alloys, Manganese and it's alloys, Chromium and it's alloys, Nickel and it's alloys.

(9 hours)

Registrar  
Sri Satya Sai University of Technology  
& Medical Sciences Sehore (M.P.)

51

## UNIT-V

Chemical Analysis of different alloying elements in commercial metals, C, Fe, Cr, Ni, Mn, Mg, S, P, Co, Mo, Etc. Different chemical reagents, Equipments , Volumetric and Gravimetric analysis, Spot test, Colorimetric methods, Optical and spectrophotometric analysis.

(9 hours)

MEA- 303	Materials Technology	2L:0T: 1P	1credits	2Hrs/Week
----------	-------------------------	-----------	----------	-----------

**List of Experiments:**

1. Metallographic studies – Study of Optical microscope, Optically flat surface preparation, etching reagents, Grain size- ASME no., micro structures, Image analysis, Standard specimen,
2. Carbon, sulphur, Phosphorus determination, Strauhlin's apparatus, Eggert's Method in different samples.
3. Hardness and Hardenability test, Jeremy Cony test. Soft and hard Martensite.
4. Different heat treatment cycles using electric furnace [ Programmable preferred ], Annealing, Case carburising, Normalising, etc.
5. Gravimetric / Volumetric - chemical analysis of alloying elements like, Cr, Ni, Mn, Si etc.
6. To Study of different instrumental method of analysis, Spectrophotometers, Differential Scanning calorimeter,
7. Spot test for quick assessment of alloying elements like Mn, Cr, Ni, etc.
8. Experiments / study of Non Destructive Methods, Ultrasonic test, Magnetic particle inspection, Dye penetration Test, Eddy current Test, Radiography Test. Cupping Test / Formability Test for sheet metal.

MEA-304	Manufacturing Process	3L:0T:0 P	3credits	3Hrs/Week
---------	-----------------------	-----------	----------	-----------

**Course Preamble:**

1. To state the importance and need to Manufacturing processes
2. To choose among various tool materials.
3. To aware the students about various Manufacturing processes
4. To give them practical exposure of various Manufacturing processes
5. To tell them about applications of various Manufacturing processes.

**Course Outcomes:**

By the end of the course the students shall be able to

1. The Fundamentals of Engineering Materials
2. The principle working and controlling parameters of metal forming processes and the principle working and controlling parameters of welding
3. The principle working and controlling parameters of foundry and the process of mould making

**UNIT-I**

Casting: Types of casting process. Molding and Foundry core sands and their properties, gating, runners, risers, solidification, defects and elimination, molding machines, centrifugal casting, dye casting, Shell molding; Lost wax molding; continuous casting; Cupola description and operation.

(9 hours)

**UNIT-II**

Welding: Types of welding, Gas welding method, Various types of oxy-acetylene gas flames, Gas Cutting, Electric arc welding, AC and DC welding machines and their characteristics, flux, electrodes, submerged arc welding, TIG & MIG welding; pressure welding; electric resistance welding spot, seam and butt welding; Thermit Chemical welding; brazing and soldering, welding defects & remedies along with safety precautions.

(9 hours)

**UNIT-III**

Pattern Making: Types of patters, Pattern and pattern making, pattern allowances; pattern design considerations, core, core boxes. Forging: types of forging operations Theory and application of forging processes description; drop and horizontal forging machines.

(9 hours)

**UNIT-IV**

Press working: Description and operation of processes, process of shearing, punching, piercing, blanking, trimming, perfecting, notching, lancing, embossing, coining, bending, forging and drawing; press, tool dies, auxiliary equipment, safety devices, stock feeders, scrap cutters, forces, pressure and power requirements. Rolling: Types of Rolling operations, General description of machines and process; rolling of structural section plates and sheets; hot and cold rolling techniques.

(9 hours)

**UNIT-V**

Registrar

MEA- 304	Manufacturing Process	0L:0T:1P	1credits	3Hrs/Week
----------	-----------------------	----------	----------	-----------

**List of Experiments:**

1. To study of tools used for various manufacturing processes, study includes application & live demonstration of hand and machine tools .
2. To study of the Pattern Making
3. To study of Metal Casting of Simple component
4. To study of gas welding
5. To study of different welding process
6. To study of the die Casting
7. To study and perform various operation of forging machine .

  
Registrar  
Set Setya Seti University of Technology  
& Medical Sciences Sehore (M.P.)

MEA- 305	Strength of Material	2L:1T:0P	3credits	3Hrs/Week
----------	----------------------	----------	----------	-----------

**Course Preamble:**

1. Provide clear understanding of principles, assumptions, and limitations underlying the mechanics of deformable solids in equilibrium.
2. Apply above principles to engineering design based on strength, stiffness, and stability criteria.

**Course Outcomes**

1. Given a physical situation the student should be able to develop a physical understanding of the problem.
2. The student should then be able to construct an idealized model.
3. Using equilibrium, compatibility, and force-deformation relation the student should be able to generate the solution to the problem.
4. The student should be able to analyze and design an element Using the above principles.

**UNIT-I**

**Stress and strain:** stresses in members of a structure, axial loading, normal stress, shear stress, analysis of simple structures, stepped rods, members in series and parallel: stress strain diagram, Hooke's law, stress due to temperature, Poisson's ratio, Bulk modulus, shear strain, relation among elastic constants, residual stress, fiber reinforced composite materials, strain energy under axial loads and stresses due to impact of falling weights. Transformation of stress and strain, principal stresses, normal and shear stress. **Mohr's circle** and its application to two and three dimensional analysis.

(9 hours)

**UNIT-II**

**Bending:** pure bending, symmetric member, deformation and stress, bending of composite sections, Eccentric Axial loading, Shear Force and BM diagram, relationship among load, shear and BM, shear stresses in beams, Strain Energy in bending, **Deflection of Beams**, Equation of Elastic Curve, Macaulay's method and Area moment method for **deflection of beams**.

(9 hours)

**UNIT-III**

**Torsion in shafts:** Tensional stresses in a shafts, deformation in circular shaft, angle of twist, stepped and hollow transmission shafts,

(6 hours)

**UNIT-IV**

**Theories of failures:** Maximum Normal Stress & Shear stress theory; Maximum Normal and Shear Strain Energy Theory; Maximum Distortion Energy Theory; application of theories to different materials and loading conditions.

(9 hours)

Registrar  
Sri Satya Sai University of Technology  
& Medical Sciences Sehore (M.P.)

57

**UNIT-V**

**Columns & struts : Stability of Structures.** Euler's formula for columns with different end conditions, Rankine's formula.

(8 hours)

MEA- 305	Strength of Material	0L:0T:1P	1credits	2Hrs/Week
----------	----------------------	----------	----------	-----------

### List of Experiments

1. To perform Standard Tensile Test on MS and CI test specimen with the help of UTM
2. To perform direct/ cross Shear test on MS and CI specimen
3. To perform transverse bending test on wooden beams to obtain modulus of rupture
4. To perform fatigue test
5. To perform Brinell Hardness tests
6. To perform Vicker Hardness test
7. To perform Izod/Charpy test
8. To perform Rockwell Hardness test.

Registrar

Sai Baba Sai University of Technology  
& Medical Sciences Sehore (M.P.)

MEA- 306	Thermal Engineering Lab	0L:0T:1P	1credits	2Hrs/Week
----------	----------------------------	----------	----------	-----------

**Course Preamble:**

1. Heat transfer ( Micro, Macro and Nano scale)
2. Combustion Engineering and Flame Dynamics
3. Renewable Energy Systems and Conventional Power Cycles
4. Thermodynamic Energy and Exergy optimization
5. HVAC & Cryogenics
6. Micro and Nano scale fluid transport
7. Optical methods in flow visualization
8. Turbulent Dynamics
9. Gas dynamics

**List of Experiments:**

1. To determine volumetric and isothermal efficiencies of a single stage compressor.
2. To Study of two stages Air Compressor with intercooler.
3. To determine volumetric and isothermal efficiencies of a two stage compressor.
4. To Study of different types of boilers and their classifications.
5. To Study of different types of high pressure boilers.
6. To determine the performance of boiler.
7. Temperature measurements, Pyrometers and thermography.
8. Thermocouples, Temperature sensors, study and calibration.
9. To Study and experiments on ORSAT apparatus.
10. Experiments on calorific value of different fuels and analysis of exhaust gases.

MEA-307	Self-Study / GD Seminar	0L:0T:1P	1 credits	2Hrs/Week
---------	-------------------------	----------	-----------	-----------

**Course Preamble:**

To improve the mass communication and convincing / understanding skills of students and it is to give student an opportunity to exercise their rights to express themselves. Evaluation will be done by assigned faculty based on group discussion and power point presentation.

**Course Outcomes**

1. Analytical thinking
2. Lateral thinking
3. constructive argument
4. Communication skill
5. Presentation of views

The main Preamble is to improve the mass communication and convincing/understanding skills of students, And to give the students an opportunity to exercise their rights to express themselves. The evaluation will be done based on their presentation work and group discussion.

## SEMESTER –IV

BEA-401	Energy, Ecology, Environment & Society	3L:0T:0P	3 credits	3Hrs/Week
---------	--	----------	-----------	-----------

### Course Preamble:

1. To understand the basic principles of Energy, its availability and its economical utilisation.
2. To acquire proficiency in using & calibrating various energy.
3. To understand the problems in society towards environment degradation due to conventional energy.
4. Society, Ethics & Human values regarding energy.

### Course Outcomes:

Students will be able to

1. Understand the fundamental science and engineering principles relevant to energy.
2. Understand the relationship between various energy, characteristic, properties and its economical use.
3. Processing and energy efficiency achievement.

### UNIT -1

Sources of Energy: Renewable & Non Renewable, Fossil fuel, Biomass Geothermal, Hydrogen, Solar, Wind, hydro, nuclear sources.

(9 hours)

### UNIT-2

Segments of Environment: Atmosphere, hydrosphere, Lithosphere, biosphere. Cycles in Ecosystem - Water, Carbon, Nitrogen. Biodiversity: Threats and conservation.

(8 hours)

### UNIT-3

Air Pollution: Air pollutants, classification, (Primary & secondary Pollutants) Adverse effects of pollutants. Causes of Air pollution chemical, photochemical, Green house effect, ozone layer depletion, acid Rain. Sound Pollution: Causes, controlling measures, measurement of sound pollution (deciblage), Industrial and non – industrial.

(10 hours)

### UNIT-4

Water Pollution– Water Pollution: Pollutants in water, adverse effects. Treatment of Domestic & Industrial water effluent. Soil Pollution – Soil Profile, Pollutants in soil, their adverse effects, controlling measures.

(8 hours)

### UNIT-5

Society, Ethics & Human values– Impact of waste on society. Solid waste management Nuclear, Thermal, Plastic, medical, Agriculture, domestic and e-waste). Ethics and moral values, ethical situations, objectives of ethics and its study . Preliminary studies regarding Environmental Protection Acts, introduction to value education, self exploration, sanyam & swasthya.

(9 hours)

MEA-402	Instrumentation & Control	2L:1T:0P	3 credits	3Hrs/Week
---------	---------------------------	----------	-----------	-----------

**Course Preamble:**

1. To understand the basic principles, construction and working of engineering mechanical measurement science.
2. To acquire proficiency in using, calibrating various measurement systems.
3. To understand the problems in measurement system and develop the competency to resolve the problems.
4. To know all the measuring instruments and to measure different parameters in day-today work.

**Course Outcomes:**

1. After going through basic study of generalized measurement system, students will be able to understand the stepwise working of all instruments and will be able to find out the output factors.
2. They will be able to know the importance of all factors affecting on output of instruments i.e. errors.
3. They can suggest some points in the design & working of instruments after studying the basics of metrology.
4. Students will be able to differentiate between all types of measurements i.e. Direct & indirect type, contact & non-contact type as well as they can design the components with provisions of tolerance in manufacturing.

**Unit-1**

**Introduction to instrumentation systems,** classifications, functional elements of a measurement system, standards and calibration, static performance characteristics, measurement errors and uncertainties, analysis, sequential and random test, specifications of instrument static characteristics, data acquisition, reduction, data outlier detection.

(9 hours)

**Unit-2**

**Dynamic characteristics of the instruments,** formulation of system equations, dynamic response, compensation, and periodic input, harmonic signal non harmonic signal, Fourier transform, response to the transient input, response to random signal input, first and second order system compensation.

(9 hours)

**Unit-3**

**Introduction to instrument systems-** (a) **Temperature measurements,** thermometry based on thermal expansion, liquid in glass, bimetallic, electric resistance- thermometry, thermocouples, thermistors, detectors, (b) **pressure and velocity measurements,** barometer, manometer, dead weight tester, pressure gauges and transducers, dynamic measurements, (c) **flow measurements,** pressure differential meters, orifice meter, venturi meter, rota-meter.

(9 hours)

Registrar

Sri Satya Sai University of Technology  
& Medical Sciences, Warangal (M.P.)

#### Unit-4

Strain gauges, strain and stress measurements, electrical circuits, compensations, motion force and torque measurements, displacement measurements, potentiometers, linear and rotary variable differential transformers, velocity measurements, electromagnetic technique, stroboscope, load cell, measurement of torque on rotating shaft, power estimation from rotating shaft.

(9 hours)

#### Unit-5

Control systems, open loop and close loop control, mathematical modeling of dynamic systems – mechanical systems, electrical systems, fluid systems, thermal systems, transfer function, impulse response function, block diagrams of close loop systems, system modeling using software.

(9 hours)

MEA-403	Theory of Machines	2L:1T:0P	3 credits	3Hrs/Week
---------	--------------------	----------	-----------	-----------

**Course Preamble:**

1. This course aims at the fundamental science and engineering principles relevant to machines.
2. The course will present systematic approaches for the mechanical working of machines.
3. Various machine working principles and how to raise their efficiency.

**Course Outcomes:**

Students will be able to

1. Understand the fundamental science and engineering principles relevant to machines.
2. Understand the relationship between dynamic and static forces involved on machines.
3. Processing and economical design of machines.

**Unit-1**

Introduction, kinematics and kinetics, mechanisms and machines, degree of freedom, types of motions, kinematic concept of links, basic terminology and definitions, joints and kinematic chains, inversions, absolute and relative motions, displacement, velocity and acceleration diagrams, different mechanisms and applications.

(9 hours)

**Unit-2**

kinematic synthesis of linkages, dynamic motion analysis of mechanisms and machines, D'Alembert's principle, number synthesis, free body diagrams, kinematic and dynamic quantities and their relationships, analytical method and graphical method.

(9 hours)

**Unit-3**

Cams, introduction, classifications of cams and followers, nomenclature, analysis of cam and follower motion, analytical cam design with specific contours, pressure angle, radius and undercutting, motion constrains and program, critical path motion, torque on cam shaft.

(9 hours)

**Unit-4**

Power transmission, kinematics of belt- pulley, flat and v -belt, rope, condition of maximum power transmission, efficiency, friction, friction devices, pivot and collars, power screw, plate and cone clutch, brakes, classifications, block, band, internal and external, friction circle, friction axis.

(9 hours)

**Unit-5**

Gears, laws of gearing, classification and basic terminology, tooth profiles, kinematic considerations, types of gears, spur, bevel, worm, helical, hypoid etc, Gear Trains, Epicyclic, Compound, balancing- static and dynamic, in same/ different planes, introduction to vibration, single degree of freedom.

MEA-404	Fluid Mechanics	2L:1T:0P	3 credits	3Hrs/Week
---------	-----------------	----------	-----------	-----------

**Course Preamble:**

1. To understand the structure and the properties of the fluid.
2. To understand the behavior of fluids at rest or in motion and the complexities involved in solving the fluid flow problems.
3. To solve different type of problems related to fluid flow in pipes and do the prototype study of different type of machines

**Course Outcomes:**

1. Explain the concept of fluid, stability of bodies in fluid and different types of fluid flows.
2. Use Bernoulli's theorem to solve basic problems involving pressure losses through pipes and pipe bends and its application
3. Explain the importance of Dimensional Analysis techniques and dimensionless parameters in fluid mechanics; Reynolds number; Mach number.
4. Learn the concept of potential flow, viscous flow considering viscous forces

**Unit-1**

Introduction, fluid and the continuum, fluid properties, surface tension, bulk modulus and thermodynamic properties, Newton's laws of viscosity and its coefficients, Newtonian and non Newtonian fluids, hydrostatics and buoyancy, meta center and metacentric height, stability of floating bodies.

(9 hours)

**Unit-2**

Fluid kinematics, Lagrangian and Eulerian method, description of fluid flow, stream line, path line and streak line, types of flow and types of motion, local and convective acceleration, continuity equation, potential flow, circulation, velocity potential, stream function, Laplace equation, flow nets.

(9 hours)

**Unit-3**

Fluid dynamics, system and control volume, Reynold transport theorem, Euler's equation, Bernoulli's equation, momentum and moment of momentum equation, their applications, forces on immersed bodies, lift and drag, streamlined and bluff bodies, flow around circular cylinder and aerofoils.

(9 hours)

**Unit-4**

Flow through pipes, Reynold number, laminar and turbulent flow, viscous flow through parallel plates and pipes, Navier Stoke's equation, pressure gradient, head loss in turbulent flow ( Darcy's equation), friction factor, minor losses, hydraulic and energy gradient, pipe networks.

(9 hours)

**Unit-5**

Introduction to boundary layer theory, description of boundary layer, boundary layer parameters, Von Karman momentum equation, laminar and turbulent boundary conditions, boundary layer separation, compressible flow, Mach number, isentropic flow, stagnation properties, normal and oblique shocks, Fanno and Reyleigh lines, flow through nozzles.

(9 hours)

MEA-404	Fluid Mechanics	0L:0T:1P	1 credits	2Hrs/Week
---------	-----------------	----------	-----------	-----------

List of Experiments:

1. To determine the meta-centric height of a ship model.
2. To verify Impulse Momentum Principle.
3. To calibrate a Venturimeter and study the variation of coefficient of discharge.
4. To calibrate an orifice-meter.
5. To Flow measurement using Pitot tube.
6. To determine the hydraulic coefficients ( $C_c$ ,  $C_d$  and  $C_v$ ) of an orifice.
7. To determine the coefficient of discharge of a mouth piece.
8. To study the variation of friction factor for pipe flow.

MEA- 405

Manufacturing Technology

2L:1T:0P

3 credits

3Hrs/Week

**Course Preamble:**

1. The primary objective of this course is to help the student gain the knowledge about traditional manufacturing machine like lathe, drilling, milling, grinding and welding machines.
2. To understand various tools and tool signature used on these machines
3. To understand importance of measurement and process of measurement.

**Course Outcomes:**

1. Identify the different components and operations of traditional machines.
2. Select and apply different manufacturing processes to machine a component.

**Unit-1**

Analysis of Machining processes, introduction, tool geometry, tool materials, wear characteristics, cutting forces, , cutting fluids, failure of cutting tools, broaching operation, types of broaching machines, design of broaching tools, centre less grinding, thread chaser, thread grinding boring, super finishing processes like honing, lapping, electroplating and buffing.

(9 hours)

**Unit-2**

Gear machining, types of gears, elements of gears, different methods of gear production, gear cutting on milling machine, gear machining by generation method, principles of generation of surfaces – hobbing, shaping and basic rack cutting, gear finishing by shaving and gear grinding, tooth profile grinding, suitable gear treatments.

(9 hours)

**Unit-3**

Plastics, composition of plastic materials, moulding method- injection moulding, compression moulding, transfer moulding, extrusion moulding, calendaring, blow moulding, laminating and reinforcing, welding of plastics.

(9 hours)

**Unit-4**

Unconventional machining processes, introduction, abrasive jet machining, ultrasonic machining, electrochemical machining, electro discharge machining, electron beam machining, laser beam machining, plasma arc machining, non destructive testing of machined surfaces and tools.

(9 hours)

**Unit-5**

Extrusion, principles, hot and cold extrusion processes, tube extrusion, sawing, power hacksaw, band saw, circular saw, Introduction to numerical control machining, NC Machine tools, NC tooling ,part programming, functions, coordinate systems.

(9 hours)

MEA- 405	Manufacturing Technology	0L:0T:1P	1 credits	2Hrs/Week
----------	--------------------------	----------	-----------	-----------

**List of Experiments:**

1. To Study of different methods of gear production.
2. To Study of different grinding machines.
3. To Study of Processing Plastics-Injection Molding.
4. To Study the manufacturing of different methods of gear.
5. To Study of hot and cold extrusion processes

**Registrar**  
Sai Satya Sai University of Technology

MEA- 406	Software Lab	2L:1T:0P	3 credits	3Hrs/Week
----------	--------------	----------	-----------	-----------

**Course Preamble:**

1. To introduce field of Intelligent CAD/CAM with particular focus on engineering product design and manufacturing.
2. To develop a holistic view of initial competency in engineering design by modern computational methods.
3. To understand concepts of geometric modelling.
4. Provide theoretical background of CAD/CAM. v) Introduce Rapid Prototyping techniques.

**Course Outcomes:**

A learner will be able to....

1. Identify proper computer graphics techniques for geometric modelling.
2. Transform, manipulate objects, store and manage data.
3. Prepare computer assisted part program and post process.
4. Prepare part programming applicable to CNC machines.
5. Use rapid prototyping and tooling concepts in any real life applications.

Role of computers in design and manufacture. Drawing software, configuration, function and facilities, parametric representation, examples of drawings and systems  
 Surface modeling, curves and surface representation – composite surfaces, case studies in CAD, parametric representation analytic and synthetic curves, surface manipulation, design and engineering applications, Current developments in CAD, feature based modeling, design by feature, Solid modeling, boundary representation, analytic solid modeling, constructive solid geometry, sweep representation, design and engineering applications,  
 Strategic plan of CAD system design and development, graphic exchange, features recovery, etc.

MEA- 406	Software Lab	0L:0T:1P	1 credits	2Hrs/Week
----------	--------------	----------	-----------	-----------

### List of Experiments

1. 2D sketching on CAD software
2. 3D modeling on CAD software
3. Modeling of IC Engine components
4. Modeling of hand tools
5. Modeling of modern Furniture using CAD software
6. Modeling and Assembling components for a project on CAD software
7. A case study on Product Design using CAD software

A handwritten signature in blue ink, likely belonging to the Registrar.

MEA-407	Industrial Training - I	0L:0T:1P	1 credits	2Hrs/Week
---------	-------------------------	----------	-----------	-----------

**Course Preamble:**

Industrial Training is imparted with the following in mind-

1. To provide comprehensive learning platform to students where they can enhance their employability skills and become job ready along with real corporate exposure.
2. To enhance students' knowledge in electrical technology.
3. To Increase self-confidence of students and helps in finding their own proficiency
4. To cultivate student's leadership ability and responsibility to perform or execute the given task.
5. To provide learners hands on practice within a real job situation

**Course Outcomes:**

At the end of the training, a student will be able to:

1. acquire and apply fundamental of engineering aspects learned during training.
2. Become updated with all the latest changes in technological world.
3. Ability to communicate efficiently.
4. Ability to identify, formulate and model problems in real practical field and find engineering solution based on a systems approach.
5. Awareness of the social, cultural, global and environmental responsibility as an engineer.

Duration:- 2 weeks after the IV semester in the summer break, Assessment in V semester.

Students must observe following to enrich their learning during industrial training:

- Industrial environment and work culture.
- Organizational structure and inter personal communication.
- Machines/ equipment/ instruments - their working and specifications.
- Product development procedures and phases.
- Project planning, monitoring and control.

Minutes of Board of Studies Committee Meeting Dated on **01.02.2020**

The Board of Studies Committee Meeting was held in the room of Department of **Mechanical Engineering** at **2:30 PM.** on **01.02.2020**, Following members were present.

1. Mrs. Priyanka Jhavar, Associate Prof. (Mechanical Engineering), Chairman
2. Dr. G. R. Selokar , Professor (Mechanical Engineering), Member
3. Mr. Sanjay Kalraiya, Associate Prof. (Mechanical Engineering), Member
4. Mr. Anil Verma , Asst. Prof. (Mechanical Engineering) – Member
5. Mr. Dhananjay Yadav, Asst. Prof. (Mechanical Engineering), Member
6. Mr. Sachin Baraskar , Asst. Prof. (Mechanical Engineering), Member
7. Mr. Omshankar Jhariya, Asst. Prof. (Mechanical Engineering), Member
8. Dr. A.C.Tiwari Professor RGPV Bhopal External Member
9. Dr. K. R. Aharwal Professor MANIT Bhopal External Member

The Chairman of Board of Studies Committee welcomes and appreciated the efforts put up by the faculty for progress of the departmental activities. The following Agenda points were discussed and resolved.

## **Agenda Preparation of syllabus and Scheme for V, VI, VII and VIII Semester.**

### Discussion Scheme

Scheme and syllabus was put up before the member as per AICTE guidelines, It was discussed in detail by the members and modification were suggested.

  
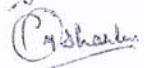

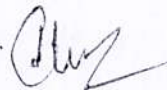

**Registrar**  
Sri Satya Sai University of Technology  
& Medical Sciences Sehore (M.P.)

**Resolution of the Discussion:**

It was resolved that scheme and syllabus as proposed with modification may be accepted

The Chairman thanks the members for peaceful conduction of meeting.

**Signature of All members (Including Chairman)**

SEMESTER –V

MEA-501	MACHINE DESIGN	COMPONENT	2L:1T:0P	03 credits	3Hrs/Week
---------	----------------	-----------	----------	------------	-----------

**Course Preamble:**

1. To familiarize the various steps involved in the Design process
2. To understand the principals involved in evaluating the shape and dimensions of a
3. Complete to satisfy function and strength requirements.
4. Students shall gain a thorough understanding of the different types of failure modes and
5. Criteria. They will be conversant with various failure theories and be able to judge which
6. Criterion is to be applied for a particular situation.
7. Student shall gain design knowledge of the different types of elements used in
8. the machine design process, for e.g. fasteners, shafts, couplings etc. and will be able to design these elements for each application.

**Course Outcomes:**

1. Ability to analyze the stress and strain of mechanical components and understand,
2. Identify and quantify failure modes for mechanical part.
3. Ability to decide optimum design parameters for mechanical systems.
4. Ability to design mechanical system for fluctuating loads.
5. . Acquire skill in preparing production drawing pertaining to various designs.

**UNIT 1**

**Design Against Fluctuating Load** : causes of stress concentration; stress concentration in tension, bending and torsion; Fluctuating Stresses, notch sensitivity, fatigue stress concentration factor, cyclic loading, endurance limit, S-N Curve, loading factor, size factor, surface factor. Design consideration for fatigue, Goodman and modified Goodman's diagram, Soderberg Equation, Gerber Parabola, Fatigue Design under Combined Stresses.

(9 hours)

**UNIT 2**

**Design of components subject to static loads: riveted joints, welded joints threaded joints, pin, key knuckle, and cotter joints, Types of cotter Joint, Dimension of Various part of the knuckle Joint.**

(9 hours)

**UNIT 3**

**Springs: Design** of helical compression and tension springs, consideration of dimensional and functional constraints, leaf springs and torsion springs; fatigue loading of springs, surge in spring; special springs.

(9 hours)

**UNIT 4**

  
 Registrar  
 Satya Sai University of Technology  
 & Medical Sciences, Sohore (M.P.)

Brakes & Clutches: Materials for friction surface, uniform pressure and uniform wear theories. Design of friction clutches: Disk, plate clutches, cone & centrifugal clutches. Design of brakes: Rope, band & block brake, Internal Expanding Brakes, Disk Brakes.

(9 hours)

## UNIT 5

Spur and Helical Gears: Force analysis of Gear Tooth, modes of failure, Beam Strength, Lewis Equation, Form Factor, Formative Gear and Virtual number of teeth; Gear materials; Surface strength and wear of teeth; strength against wear; Design of straight tooth spur and Helical Gears. Bevel Gears: Application of bevel, formative gear and virtual number of teeth; Force analysis; Lewis equation for bevel gears; Strength against wear; Design of bevel gear.

(9 hours)

MEA-501	MACHINE DESIGN	COMPONENT	0L:0T:2P	1 credits	2Hrs/Week
---------	----------------	-----------	----------	-----------	-----------

**List of Experiments:-**

Designing and sketching of components contained in the syllabus.

1. To study design procedure of Knuckle Joint with detailed drawing
2. To study design procedure of cotter joint with detailed drawing
3. To study design procedure of helical and torsion spring with detailed drawings
4. To study design procedure of brake with detailed drawings.
5. To study design procedure of clutch with detailed drawings.
6. To study design procedure of spur and helical gear with detailed drawings.

MEA-502	DYNAMICS MACHINES	OF	2L:1T:0P	03 credits	3Hrs/Week
---------	----------------------	----	----------	------------	-----------

**Course Preamble:**

1. To understand the concept of balancing of rotating and reciprocating masses.
2. To understand the Force analysis of Reciprocating Engine.
3. To study different types of Gear Trains.
4. To understand the concept of Vibrations. Single Degree of Freedom systems and the Forced Vibrations.
5. To study different types of Governors and its functions.

**Course Outcomes:**

After completion of the course, the student will be able to:

1. Apply mathematical principles to perform dynamic force analysis on machine components.
2. Establish methods for balancing of machine components.
3. Analyze free vibration of various systems.
4. Analyze forced vibration of various systems.

**UNIT 1**

**Dynamics of Engine Mechanisms:** Displacement, velocity and acceleration of piston, turning moment on crankshaft, turning moment diagram.

(9 hours)

**UNIT 2**

**Governor Mechanisms:** Types of Governors, Characteristics of Centrifugal Governors, Gravity and Spring Controlled Centrifugal Governors, Hunting of Centrifugal Governors, Inertia Governor.

(10 hours)

**UNIT 3**

**Balancing of Inertia Forces and Moments in Machines:** Balancing of Rotating Masses, Two plane balancing, determination of balancing masses (graphical and analytical methods), balancing of rotors, balancing of I.C. engine

(9 hours)

**UNIT 4**

**Friction:** Frictional Torque in Pivots and Collars by Uniform Wear and Uniform Pressure, Boundary

Registrar  
Sri Satya Sai University of Technology  
& Medical Sciences Sehore (M.P.)

and Fluid Film Lubrication, Friction in journal and thrust bearings, rolling friction, Clutches.

(8 hours)

## UNIT 5

**Belt :** Belt drives; Velocity ratio, limiting ratio of tension; power transmitted; centrifugal effect on belts, maximum power transmitted by belt, initial tension, chain and rope drives; Brakes: Band brake, Block brakes, Internal and External Shoe brakes, braking of vehicles. Dynamometer types and uses. Analysis of Cams, Response of Un-damped Cam Mechanism.

MEA-503	Metal Cutting & CNC Machines	2L:1T:0P	03 credits	3Hrs/Week
---------	------------------------------	----------	------------	-----------

**Course Preamble:**

The main learning objective of this course is to prepare the students for:

1. Applying fundamental knowledge, principles in material removal processes and importance of metal cutting parameters.
2. Applying the fundamentals of turning and automatic machine tools.
3. Applying the principles of reciprocating, milling and gear cutting machines.
4. Applying the principles of abrasive processes and broaching processes.
5. Applying the CNC machine tools and programming manufacturing processes.

**Course Outcomes:**

Upon completion of this course, the students will be able to:

1. Apply fundamental knowledge, principles in material removal processes and importance of metal cutting parameters.
2. Apply the fundamentals of turning and automatic machine tools
3. Apply the principles of reciprocating, milling and gear cutting machines.
4. Apply the principles of abrasive processes and broaching processes
5. Apply the CNC machine tools and programming manufacturing processes

**UNIT I**

**Lathe:** Classification of machine tools and their basic components; lathe- specification, components & accessories, various operations on lathes, capstan & turret lathes, tool layout, methods of thread production, machining time, single point cutting tools, tool signature and nomenclature.

(8 hours)

**UNIT II**

**Grinding:** Types of grinding machines, surface, cylindrical and internal grinding, grinding wheels, specifications, wheel turning and dressing without eccentricity, centre-less grinding.

(8 hours)

**UNIT III**

**Milling:** Vertical, horizontal and universal type machines, specifications and classifications of milling machines, universal dividing head plain and different indexing, gear cutting, milling cutters.  
**Drilling & Broaching:** Fixed spindle, radial and universal drilling machines, drilling time, broaching principle, broaches and broaching machines.

(9 hours)

Registrar  
 Sri Satya Sai University of Technology  
 & Medical Sciences Sehore (M.P.)

#### UNIT IV

**Shapers:** Classification and specifications, principle parts, quick return mechanism, shaper operations, speed feed, depth of cut, machining time. Surface qualities, equipment used for rating surfaces, rms, CLA value, causes for surface irregularities. **Gear Cutting:** Die casting, methods of forming gears, generating process, Gear shaping, gear shaving, gear grinding gear testing.

(10 hours)

#### UNIT V

**Mechatronics:** Introduction to control systems, analog control, transfer function, procedure for writing transfer function, signal flow diagram, introduction to electronic components like switches, magnetic type, electromagnetic type, transducers and other sensors, servo motors, basics of CD-ROM players, PLC, applications, CNC machines.

(9 hours)

MEA-504 (A)	Turbo Machinery	3L:1T:0P	04 credits	3Hrs/Week
----------------	-----------------	----------	------------	-----------

**Course Preamble:**

The purpose of the course is to introduce the means by which the energy transfer is achieved in the main types of turbo machines and the different behaviors of individual types in operation. The course aims at introducing preliminary design fundamentals of turbo machines including axial and radial flow turbines and axial and centrifugal flow compressors.

**Course Outcomes:**

Demonstrate a basic understanding of laws of fluid flow and thermodynamics in association with the turbo machinery Course Learning Outcomes:

II- Tackle turbo machinery problems associated with industry

III- Design some parts in gas turbine systems.

IV- Develop computational skills to analyze and design of components such compressor intake, diffusers, and gas turbine exits

**UNIT 1**

**Energy transfer in turbo machines:** Application of first and second laws of thermodynamics to turbo machines, Moment of momentum equation and Euler turbine equation, Principles of impulse and reaction machines, Degree of reaction, Energy equation for relative velocities.

(8 hours)

**UNIT 2**

**Steam turbines: Impulse staging:** Velocity and pressure compounding, Include qualitative analysis, Effect of blade and nozzle losses on vane efficiency, Stage efficiency, Analysis for optimum efficiency, Mass flow and blade height. **Reactions staging:** Parson's stages, Degree of reaction, Nozzle efficiency, Velocity coefficient, Stator efficiency, Carry over efficiency, Stage efficiency, Vane efficiency, Conditions for optimum efficiency, Axial thrust, Reheat factor in turbines, Free and forced vortex types of flow, Governing and performance characteristics of steam turbines.

(10 hours)

**UNIT 3**

**Water turbines:** Classification, Pelton, Francis and Kaplan turbines, vector diagrams and work done, draft tubes, governing of water turbines.

(8 hours)

*Prof. ...*

#### UNIT 4

**Centrifugal Pumps:** Classification, Advantage over reciprocating type, Definition of manometric head, Gross head, Static head, Vector diagram and work done. **Performance and characteristics** Application of dimensional analysis and similarity to water turbines and centrifugal pumps, Selection of machines, Hydraulic, volumetric, Mechanical and overall efficiencies.

(10 hours)

#### UNIT 5

**Compressors:** Centrifugal Compressor – Vector diagrams, Work done, Temp and pressure ratio, Slip factor, Work input factor, Pressure coefficient, Dimensions of inlet eye, Impeller and diffuser. Axial flow Compressors Vector diagrams, Work done factor, Temp and pressure ratio, Degree of reaction.

(9 hours)

MEA-504 (B)	Production & Operation Management	3L:1T:0P	04 credits	3Hrs/Week
----------------	--------------------------------------	----------	------------	-----------

**Course Preamble:**

- To introduce the students to the types of productions in the industries as well as
  - they should be familiar with the functions of PPC used in the shop floor of the industry.
- To introduce the students to the design and development of the product as well as
  - importance of product characteristic for the design and development of product.
- To familiarize the students with the batch production of the shop floor for
  - optimization for the cost or profit .
- To introduce the students by using the multi activity chart for calculation of machine cycle efficiency also familiarize with line balancing problems of shop floor.
- To introduce with calculation of cost of the product as well as replacing the machine after its life time.
- To introduce the students the necessity of maintaining the inventory.

**Course Outcomes:**

Upon successful completion of this course, the student will be able to.....

- Illustrate the types of production and use of functions of PPC on the shop floor.
- Illustrate the design and development of the product on the shop floor.
- Illustrate the optimization technique used in batch production.
- To calculate the idle time and machine cycle efficiency to improve the
- To develop the balanced line of production with minimum idle time.
- To understand how to maintain the inventory for shop floor.

**UNIT 1**

**Introduction** : System concept of production; Product life cycle: Types and characteristics of production system; Productivity; Process and product focused organization structures; Management decisions – strategic, tactical and operational.

(8 hours)

**UNIT 2**

**Forecasting** : Patterns of a time series – trend , cyclical, seasonal and irregular; Forecasting techniques : moving average, simple exponential smoothing, linear regression; Forecasting a time series with trend and seasonal component.

(8 hours)

Registrar  
Sree Sai University of Technology  
& Medical Sciences Sehore (M.P.)

### UNIT 3

**Materials Management and Inventory Control**: Components of materials management; Inventory control : EOQ model, Economic lot size model, Inventory model with planned shortages, Quantity discounts for EOQ model; ABC analysis; Just-in-time inventory management. **Materials Requirement Planning**: MRP concept – bill of materials (BOM), master production schedule; MRP calculations.

(10 hours)

### UNIT 4

**Machine Scheduling**: Concept of Single machine scheduling – shortest processing time (SPT) rule to minimize mean flow time, Earliest due date (EDD) rule to minimize maximum lateness, Total tardiness minimizing model; Minimizing makespan with identical parallel machines; Johnson's rule for 2 and 3 machines scheduling.

(9 hours)

### UNIT 5

**Project Scheduling**: Activity analysis; Network construction; critical path method (CPM); Crashing of project network. **Quality Assurance**: Meaning of Quality; Quality assurance system; choice of process and quality; Inspection and control of quality; Maintenance function & quality; Process control charts : x-chart and Rechart, p-chart and c-chart; Acceptance sampling : Operating characteristic (O.C) curve, Single sampling plan, Double sampling plan, Acceptance sampling by variables; concept of Six Sigma.

(9 hours)

MEA-505 (A)	Work Study and Ergonomics	3L:1T:0P	04 credits	3Hrs/Week
----------------	---------------------------	----------	------------	-----------

### Course Preamble:

This course introduces the role of Work Study in the industry and how productivity issues in the industry can be addressed by the application of Work Study, while stimulating critical thinking on the techniques of Method Study and Work Measurement. The course also introduces the concept of conducting time studies and production studies to assess time standards and production standards for fulfilling production goals in an organization. The course further introduces the scope of ergonomics and the application of ergonomic principles to workplace design and work organization and culminates with the concept of evaluating the impact of various human factors to design of safe workplace environment.

### Course Outcomes:

The students will be able to:

1. develop a case for productivity improvement in any manufacturing or service industry scenario
2. independently conduct a method study in any organization with the objective of improving a process, material movement system or design of a work place
3. develop time standards for operations, identify production bottlenecks and improvise operations
4. apply principles of good ergonomic design of work areas and equipment
5. identify, explain and evaluate the impact of various personal attributes (anatomical, physiological and anthropometric) on proper safe working practice

### UNIT 1

**Method study:** purpose of work study, its objectives, procedure and applications; method study definition and basic procedure, selection of job, various recording techniques like outline process charts, flow process charts, man machine charts, two handed process charts, string diagram, flow diagram, multiple activity chart, simo, cyclographs and chrono-cyclographs; critical examination, development, installation and maintenance of improved method; principles of motion economy and their application in work design; micro motion study, memo motion study and their use in methods study.

(10 hours)

### UNIT 2

**Work measurement:** Introduction & definition, objectives and basic procedure of work measurement; application of work measurement in industries; time study: basic procedure, equipments needed, methods of measuring time, selection of jobs, breaking a job into elements; numbers of cycles to be timed; rating and methods of rating, allowances, calculation of standard time.

Registrar  
Sri Satya Sai University of Technology  
& Medical Sciences Sehore (M.P.)

**Work sampling:** Basic procedure, design of work sampling study conducting work sampling study and establishment of standard-time.

(9 hours)

### UNIT 3

**Job evaluation and incentive schemes:** Starlight line, Taylor, Merrick and Gantt incentive plans Standard data system; elemental and non-elemental predetermined motion systems, work factors system; Methods Time Measurement (MTM), MOST.

(8 hours)

### UNIT 4

**Human factor engineering:** Definition and history of development of human factors engineering, types & characteristics of man-machine-system, relative capabilities of human being and machines; development and use of human factor data; information input and processing; Introduction to information theory; factors effecting information reception and processing; coding and selecting of sensory inputs.

(8 hours)

### UNIT 5

**Display systems and anthropometric data:** Display- types of visual display, visual indicators and warning signals; factorial and graphic display; general principles of auditory and tactral display, characteristics and selection.

(8 hours)

MEA-505 (B)	Industrial Safety Engineering	3L:1T:0P	04 credits	3Hrs/Week
----------------	-------------------------------	----------	------------	-----------

**Course Preamble:**

1. Possess a mastery of Health safety and environment knowledge and safety management skills, to reach higher levels in their profession.
2. Knowledgeable safety Engineer rendering professional expertise to the industrial and societal needs at national and global level subject to legal requirements.
3. Well communicate the information on Health safety and environment facilitating collaboration with experts across various disciplines so as to create and execute safe methodology in complex engineering activities

**Course Outcomes:**

1. Apply knowledge of Mathematics, Science, Engineering fundamentals and an engineering Specialization for hazard identification, risk assessment, analysis the source of incidents and control of occupational Diseases & hazards.
2. Design, Establish, Implement maintain and continually improve an occupation health and safety management system to improve safety.
3. Conduct investigations on unwanted incidents using e.g. (Root cause analysis, what if analysis) and generate corrective and preventive action to prevent repetition and happening of such incidents.

**UNIT 1**

**Safety management**-Need for safety, safety and productivity, planning for safety, formulation of safety policy, safety management techniques-job safety analysis, safety sampling technique, incident recall technique, plant safety inspection, safety organizations and its functions.

(8 hours)

**UNIT 2**

**Accident prevention**-Nature and causes of accidents, accident proneness, cost of accidents, accident prevention methods, accident reporting and investigation, personal protective equipment's, safety education and training, damage control and disaster control.

(8 hours)

**UNIT 3**

**Operational Safety**

General safety considerations in material handling – manual and mechanical, safety in machine shop, safety in use of hand and portable (power) tools, safety in use of electricity, safety in welding and

Registrar  
Sri Satya Sai University of Technology  
& Medical Sciences Sehore (M.P.)

cutting, principles of guarding, safety in grinding, safety in heat treatment shop, safety in gas furnace operation.

(9 hours)

#### UNIT 4

**Occupational Health and Hygiene-** Concept and spectrum of health, levels of prevention, functional units of occupational health service, activities of occupational health unit, occupational and work related diseases such as silicosis, asbestosis, lead, nickel, chromium and manganese toxicity, prevention and control, gas poisoning, effects and prevention, hearing conservation programme - physical and chemical hazards - control measures.

(10 hours)

#### UNIT 5

**Fire engineering and explosion control-** Fire triangle, classification of fires, fire properties of solid, liquid and gas, building evaluation for fire safety, fire load, fire resistance materials and fire testing, structural fire protection, exits and egress - industrial fire protection systems, sprinkler - hydrants, portable extinguishers - fire suppression systems, detection systems, principles of explosion - detonation and blast waves, explosion venting, explosion parameters, explosion suppression systems based on CO<sub>2</sub> and halogen.

## SEMESTER –VI

MEA-601	NC and CNC Machine tools	3L:1T:0P	03 credits	3Hrs/Week
---------	--------------------------	----------	------------	-----------

### Course Preamble:

This course covers Fundamentals and concepts of CNC machining centers, NC part programming, Programming through CAD/CAM (Master CAM), and Maintenance and Troubleshooting the CNC machine tools. This course offers more hands on experience through which the participants will be developing CNC programs and machining complicated shapes by using the CNC machine tools.

### Course Outcomes:

The participants will be able to:

1. Understand fundamentals of NC/CNC
2. Learn and Write NC Part Programming
3. Learn NC Programming through CAD/CAM
4. Hands –on experience on Master CAM
5. Learn Tooling for NC/CNC
6. Understand machines like Chucking and Turning Centres, Machining Centres
7. Learn Maintenance and Trouble Shooting of CNC Machine Tools

### UNIT - I:

**Introduction:** Fundamentals of numerical control, advantages limitations of N.C systems - classification of N.C systems. **Computer Numerical Control:** Nomenclature, types and features of CNC machine tools, machine control unit, position control and its significance, engineering analysis of NC positioning systems, open loop and closed loop systems, precision in NC positioning systems- control resolution, accuracy and repeatability. **Actuators:** servomotors, stepper motors, transducers and feedback elements.

(9 hours)

### UNIT - II

**Features of N.C. Machine tools:** Design consideration of N.C machine tools - increasing productivity with N.C machines, tooling for CNC machine. **System Device:** Feed back system- counting devices digital analog converters. **Interpolations:** DDA integrators, simple and symmetrical DD reference word CNC interpolators.

(8 hours)

### UNIT - III

**Part Programming:** Process planning and flow chart for part programming, systems nomenclature and tool geometries, Tool presetting & modular tooling. Selection of tools based on machining capacity, accuracy and surface finish, elements of programming for turning and milling, part programming. Preparatory codes G, miscellaneous functions M, Interpolation, tool compensations, cycles for simplifying programming, typical part programming **Control Loops for N C Systems:** Introduction-control loops for point and counting systems.

(10 hours)

#### UNIT - IV

**Computerized Numerical Control:** CNC concepts-advantage of CNC reference planes, sampled data techniques, microcomputers in CNC. **Adaptive Control Systems:** Adaptive control with optimization and constraints-variable gains AC systems

(8 hours)

#### UNIT - V

**Modern CNC machines:** CNC lathes, turning centers, machining centres, automatic pallet changers, automatic tool changers, direct numerical control and applications, CNC machine design features.

(8 hours)

#### REFERENCE :

MEA-601	NC and CNC Machine tools	0L:0T:2P	1 credits	2Hrs/Week
---------	--------------------------	----------	-----------	-----------

**List of Experiment:**

1. To make a Program on cnc lathe machine  all operations like turning, step turning, drilling, taper turning, thread cutting and knurling .
2. To make a job on cnc lathe machine with all operations like turning, step turning, drilling, taper turning, thread cutting and knurling.
3. To Study of different control systems and NC codes.
4. To Study of different control systems and CNC codes.
5. To make a Program for circular interpolation,
6. To make a program on cnc milling machine gear teeth
7. To make a job on cnc milling machine gear teeth

MEA – 602	Heat and Mass Transfer	3L:1T:0P	03 credits	3Hrs/Week
-----------	------------------------	----------	------------	-----------

### Course Preamble:

The main learning objective of this course is to prepare the students for:

1. Applying the principle mechanism of heat transfer under steady state and transient conditions.
2. Applying the fundamental concept and principles in convective heat transfer.
3. Applying the theory of phase change heat transfer and design of heat exchangers.
4. Applying the fundamental concept and principles in radiation heat transfer.
5. Analyzing the relation between heat and mass transfer and to solve simple mass transfer problems.

### Course Outcomes:

Upon completion of this course, the students will be able to:

1. Apply the principle mechanism of heat transfer under steady state and transient conditions.
2. Apply the fundamental concept and principles in convective heat transfer.
3. Apply the theory of phase change heat transfer and design of heat exchangers.
4. Apply the fundamental concept and principles in radiation heat transfer.
5. Analyze the relation between heat and mass transfer and to solve simple mass transfer problems.

### Unit-1

**Basic Concepts:** Modes of heat transfer, Fourier's law, Newton's law, Stefan Boltzman law; thermal resistance and conductance, analogy between flow of heat and electricity, combined heat transfer process; **Conduction:** Fourier heat conduction equation, its form in rectangular, cylindrical and spherical coordinates, thermal diffusivity, linear one dimensional steady state conduction through a slab, tubes, spherical shells and composite structures, electrical analogies, critical-insulation-thickness for pipes, effect of variable thermal conductivity.

(10 hours)

### Unit 2

**Extended surfaces (fins):** Heat transfer from a straight and annular fin (plate) for a uniform cross section; error in measurement of temperature in a thermometer well, fin efficiency, fin effectiveness,

Registrar

97

*[Handwritten signature]*

applications; **Unsteady heat conduction:** Transient and periodic conduction, heating and cooling of bodies with known temperatures distribution, systems with infinite thermal conductivity, response of thermocouples.

(10 hours)

### Unit 3

**Convection:** Introduction, free and forced convection; principle of dimensional analysis, Buckingham 'pie' theorem, application of dimensional analysis of free and forced convection, empirical correlations for laminar and turbulent flow over flat plate and tubular geometry; calculation of convective heat transfer coefficient using data book.

(8 hours)

### Unit 4

**Heat exchangers:** Types- parallel flow, counter flow; evaporator and condensers, overall heat transfers coefficient, fouling factors, log-mean temperature difference (LMTD), method of heat exchanger analysis, effectiveness of heat exchanger, NTU method;

**Mass transfer:** Fick's law, equi-molar diffusion, diffusion coefficient, analogy with heat transfer, diffusion of vapor in a stationary medium.

(8 hours)

### Unit 5

**Thermal radiation:** Nature of radiation, emissive power, absorption, transmission, reflection and emission of radiation, Planck's distribution law, radiation from real surfaces; radiation heat exchange between black and gray surfaces, shape factor, analogical electrical network, radiation shields.

**Boiling and condensation:** Film wise and drop wise condensation; Nusselt theory for film wise condensation on a vertical plate and its modification for horizontal tubes; boiling heat transfer phenomenon, regimes of boiling, boiling correlations.

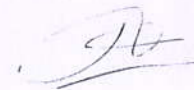

(10 hours)

MEA- 603	Heat and Mass Transfer	0L:0T:2P	1 credits	2Hrs/Week
----------	------------------------	----------	-----------	-----------

**List of Experiments:**

1. Conduction through a rod to determine thermal conductivity of material
2. Forced and free convection over circular cylinder
3. Free convection from extended surfaces
4. Parallel flow and counter flow heat exchanger effectiveness and heat transfer rate
5. Calibration of thermocouple
6. Experimental determination of Stefan-Boltzman constant

Registrar

Sri Satya Sai University of Technology  
& Medical Sciences Sehore (M.P.)

MEA-603 (A)	IC Engines	3L:1T:0P	04 credits	3Hrs/Week
----------------	------------	----------	------------	-----------

**Course Preamble:**

1. To make students familiar with the design and operating characteristics of modern internal combustion engines
2. To apply analytical techniques to the engineering problems and performance analysis of internal combustion engines
3. To study the thermodynamics, combustion, heat transfer, friction and other factors affecting engine power, efficiency and emissions
4. To introduce students to the environmental and fuel economy challenges facing the internal combustion engine
5. To introduce students to future internal combustion engine technology and market trends

**Course Outcomes:**

1. Differentiate among different internal combustion engine designs
2. Recognize and understand reasons for differences among operating characteristics of different engine types and designs
3. Given an engine design specification, predict performance and fuel economy trends with good accuracy
4. Based on an in-depth analysis of the combustion process, predict concentrations of primary exhaust pollutants

**UNIT 1**

Internal Combustion Engine: S.I. and C.I. engines of two and four stroke cycles, real cycle analysis of SI and CI engines, determination of engine dimensions, speed, fuel consumption, output, mean effective pressure, efficiency, factors effecting volumetric efficiency, heat balance, **performance characteristics of SI and CI engines**, cylinder arrangement, firing order, power balance for multi-cylinder engines, valve timing.

(10 hours)

**UNIT 2**

**Combustion in SI engines:** Flame development and propagation, ignition lag, effect of air density, temperature, engine speed, turbulence and ignition timings, physical and chemical aspects of detonation, effect of engine and fuel variables on knocking tendency, knock rating of volatile fuels, octane number, H.U.C.R., action of dopes, pre-ignition, its causes and remedy, salient features of various type combustion chambers, valve timing and firing order.

(9 hours)

Registrar

Sri Satya Sai University of Technology  
& Medical Sciences, Sehore (M.P.)

### UNIT 3

**Combustion in C.I. Engines.** Times base indicator diagrams and their study, various stages of combustion, delay period, diesel knock, octane number, knock inhibitors, salient features of various types of combustion chambers, fuel, ignition, cooling, exhaust and lubrication systems; Simple problems on fuel injection, various types of engines, their classification and salient features. Rotary I. C. engines, their principles of working.

(9 hours)

### UNIT 4

I.C. Engine System: Fuels, ignition systems, cooling, exhaust/scavenging and lubrication system. Fuel metering in SI engine: **Fuel injection** in SI engine (MPFI & TBI), Theory of carburetion, simple problems on carburetion. Fuel metering in CI engines: Fuel injection in CI engine and simple problems, various types of engines, their classification and salient features. Fuels: Conventional fuels and alternate fuels, engine exhaust emission, carbon monoxide, unburnt hydro carbon, oxides of nitrogen, smoke, density, measurement and control, hydrogen as alternate fuel.

(10 hours)

### UNIT 5

Supercharging: Effect of attitude on mixture strength and output of S.I. engines, low and high pressure super charging, exhaust, gas turbo-charging, supercharging of two stroke engines.

(8 hours)

MEA-603 (B)	MECHANICAL MEASUREMENT AND CONTROL	3L:1T:0P	04 credits	3Hrs/Week
----------------	--	----------	------------	-----------

**Course Preamble:**

1. To understand the basic principles, construction and working of engineering mechanical measurement science.
2. To acquire proficiency in using, calibrating various measurement systems
3. To understand the problems in measurement system and develop the competency to resolve the problems.
4. To know all the measuring instruments and to measure different parameters in day-today work.

**Course Outcomes:**

After going through basic study of generalized measurement system, students will be able

1. To understand the stepwise working of all instruments and will be able to find out the output factors.
2. They will be able to know the importance of all factors affecting on output of instruments
3. They can suggest some points in the design & working of instruments after studying the basics of metrology.
4. Students will be able to differentiate between all types of measurements i.e. Direct & indirect type, contact & non-contact type as well as they can design the components with provisions of tolerance in manufacturing through the concepts of metrology.

**UNIT 1**

**Measurement:** Significance of Mechanical Measurements, Classification of measuring instruments, generalized measurement system, types of inputs: Desired, interfering and modifying inputs. Static characteristics: Static calibration, Linearity, Static Sensitivity, Accuracy, Static error, Precision, Reproducibility, Threshold, Resolution, Hysteresis, Drift, Span & Range etc. Errors in measurement: Types of errors, Effect of component errors, Probable errors. (10 hours)

**UNIT 2**

**Displacement Measurement :** Transducers for displacement, displacement measurement potentiometer, LVDT, Capacitance Types, Digital Transducers (optical encoder) **Strain Measurement :** Theory of Strain Gauges, gauge factor, temperature Compensation, Bridge circuit, orientation of strain gauges for force and torque, Strain gauge based load cells and torque sensors **Measurement of Angular Velocity:** Tachometers, Tachogenerators, Digital tachometers and Stroboscopic Methods, Acceleration Measurement. (9 hours)

  
Registrar  
Satya Sai University of Technology  
& Medical Sciences, Sehora (M.P.)

### UNIT 3

Pressure Measurement: Elastic pressure transducers viz. Bourdon tubes, diaphragm, bellows and piezoelectric pressure sensors, High Pressure Measurements, Vacuum measurement: Vacuum gauges viz. McLeod gauge, Ionization and Thermal Conductivity gauges, Flow Measurement: Bernoulli's flow meters, Ultrasonic Flowmeter, Magnetic flow meter, rotameter, Temperature Measurement: Electrical methods of temperature measurement Resistance thermometers, Thermistors and thermocouples, Pyrometers.

(10 hours)

### UNIT 4

Introduction to control systems, Classification of control system, Open loop and closed loop systems, Mathematical modelling of control systems, concept of transfer function, Block diagram algebra.

(8 hours)

### UNIT 5

Transient and steady state analysis of first and second order system . Time Domain specifications, Step response of second order system. Steady-state error ,error coefficients, steady state analysis of different type of systems using step, ramp and parabolic inputs.

(8 hours)

MEA-604 (A)	Power Plant Engineering	3L:0T:0P	03 credits	3Hrs/Week
-------------	-------------------------	----------	------------	-----------

**Course Preamble:**

1. To develop an ability to apply knowledge of Mathematics and Thermal Sciences
2. To develop an ability to design a system component and processes to meet the desired needs of Power Plant.
- 3.

**Course Outcomes:**

1. Ability to have adequacy with design, erection and development of Power Plant
2. Optimization of Power Plants with respect to available resources.

**Unit I**

Introduction to methods of converting various energy sources to electric power, direct conversion methods, renewable energy sources, solar, wind, tidal, geothermal, bio-thermal, biogas and hybrid energy systems, fuel cells, thermoelectric modules, MHD-Converter.

(9 hours)

**Unit II**

Fossil fuel steam stations: Basic principles of siting and station design, effect of climatic factors on station and equipment design, choice of steam cycle and main equipment, recent trends in turbine and boiler sizes and steam conditions, plant design and layout, outdoor and indoor plant, system components, fuel handling, burning systems, element of feed water treatment plant, condensing plant and circulating water systems, cooling towers, turbine room and auxiliary plant equipment, instrumentation, testing and plant heat balance.

(10 hours)

**UNIT III**

**Nuclear Power Station:** Importance of nuclear power development in the world and Indian context, Review of atomic structure and radio activity, binding energy concept, fission and fusion reaction, fissionable and fertile materials, thermal neutron fission, important nuclear fuels, moderators and coolants, their relative merits, thermal and fast breeder reactors, principles of reactor control, safety and reliability features.

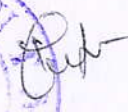

(9 hours)

**Unit IV**

**Hydro-Power Station:** Elements of Hydrological computations, rainfall run off, flow and power duration curves, mass curves, storage capacity, salient features of various types of hydro stations, component such as dams, spillways, intake systems, head works, pressure tunnels, penstocks, reservoir, balancing reservoirs, Micro and pico hydro machines, selection of hydraulic turbines for power stations, selection of site.

  
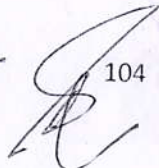

Registrar

 104

(9 hours)

### Unit V

Power Station Economics: Estimation and prediction of load. Maximum demand, load factor, diversity factor, plant factor and their influence on plant design, operation and economics; comparison of hydro and nuclear power plants typical cost structures, simple problems on cost analysis, economic performance and tariffs, interconnected system and their advantages, elements of load dispatch in interconnected systems.

(9 hours)

MEA-604 (B)	Renewable Energy System	3L:0T:0P	03 credits	3Hrs/Week
-------------	-------------------------	----------	------------	-----------

### Course Preamble:

The course should enable the students to:

1. Understand the various forms of conventional energy resources.
2. Learn the present energy scenario and the need for energy conservation
3. Explain the concept of various forms of renewable energy
4. Outline division aspects and utilization of renewable energy sources for both domestic and industrial application
5. Analyze the environmental aspects of renewable energy resources.

### Course Outcome:

Upon completion of the course, the student will be able to:

1. Describe the environmental aspects of non-conventional energy resources. In Comparison with various conventional energy systems, their prospects and limitations.
2. Know the need of renewable energy resources, historical and latest developments.
3. Describe the use of solar energy and the various components used in the energy production with respect to applications like - heating, cooling, desalination, power generation, drying, cooking etc.
4. Appreciate the need of Wind Energy and the various components used in energy generation and know the classifications.
5. Understand the concept of Biomass energy resources and their classification, types of biogas Plants- applications
6. Compare Solar, Wind and bio energy systems, their prospects, Advantages and limitations.
7. Acquire the knowledge of fuel cells, wave power, tidal power and geothermal principles and applications.

### UNIT-I

**Solar Radiation:** Extra-terrestrial and terrestrial, radiation measuring instrument, radiation measurement and predictions. **Solar thermal conversion:** Basics, Flat plate collectors-liquid and air type. Theory of flat plate collectors, selective coating, advanced collectors, Concentrators: optical design of concentrators, solar water heater, solar dryers, solar stills, solar cooling and refrigeration. **Solar photovoltaic:** Principle of photovoltaic conversion of solar energy; Technology for fabrication of photovoltaic devices; Applications of solar cells in PV generation systems; Organic PV cells.

(10 hours)

### UNIT-II

**Wind energy** characteristics and measurement: Metrology of wind speed distribution, wind speed statistics, Weibull, Rayleigh and Normal distribution, Measurement of wind data, Energy estimation of wind regimes;

Registrar  
Sri Satva Sai University of Technology  
& Management Sciences Sehore (M.P.)

*[Handwritten signature]*

*[Handwritten signature]*

106

*[Handwritten signature]*

**Wind Energy Conversion:** Wind energy conversion principles: General introduction: Types and classification of WECS; Power, torque and speed characteristics: power curve of wind turbine, capacity factor, matching wind turbine with wind regimes; Application of wind energy wind turbine with wind regimes;

(9 hours)

### UNIT-III

**Production of biomass-** photosynthesis-C3 & C4 plants on biomass production; Biomass resources **assessment; Co2 fixation** potential of biomass; Classification of biomass; Physicochemical characteristics of biomass as fuel **Biomass conversion** routes: biochemical, chemical and thermo chemical Biochemical conversion of biomass to energy: anaerobic digestion, biogas production mechanism, technology, types of digesters, design of biogas plants, installation, operation and **maintenance** of biogas plants, **biogas plant manure-utilization** and manure values. **Biomass Gasification:** Different types, power generation from gasification, cost benefit analysis of power generation by gasification.

(10 hours)

### UNIT-IV

**Small Hydropower Systems:** Overview of micro, mini and small hydro system: hydrology; Elements of turbine; Assessment of hydro power; selection and design criteria of turbines; site selection and civil works; speed and voltage regulation; Investment issue load management and tariff collection; Distribution and marketing issues. **Ocean Energy:** Ocean energy resources, ocean energy routs; Principle of ocean thermal energy conversion system, ocean thermal power plants. Principles of ocean wave energy and Tidal energy conversion.

(8 hours)

### UNIT-V

**Geothermal energy:** Origin of geothermal resources, type of geothermal energy deposits, site selection geothermal power plants; **Hydrogen Energy:** Hydrogen as a source of energy, Hydrogen production and storage. **Fuel Cells:** Types of fuel cell, fuel cell system and sub- system, Principle of working, basic thermodynamics.

(8 hours)

Dr.

MEA-605 (A)	Operation Research	3L:0T:0P	03 credits	3Hrs/Week
-------------	--------------------	----------	------------	-----------

**Course Preamble:**

1. Identify and develop operational research models from the verbal description of the real system.
2. Understand the mathematical tools that are needed to solve optimization problems.
3. Use mathematical software to solve the proposed models.
4. Develop a report that describes the model and the solving technique, analyze the results and propose recommendations in language understandable to the decision-making processes in Management Engineering.

**Course Outcome**

1. Methodology of Operations Research.
2. Linear programming: solving methods, duality, and sensitivity analysis.
3. Integer Programming.
4. Network flows.
5. Multi-criteria decision techniques.
6. Decision making under uncertainty and risk.
7. Game theory.
8. Dynamic programming.

**UNIT 1**

**Linear system and distribution models:** Mathematical formulation of linear systems by LP, solution of LP for two variables only, special cases of transportation and assignment and its solution, Vogel's forward looking penalty method, cell evaluation degeneracy, use of SW Lindo, Tora, Excell.

(8 hours)

**UNIT 2**

**Supply chain (SCM):** Definition, importance, expenditure and opportunities in SCM; integration of inbound, outbound logistics and manufacturing to SCM, flow of material money and information, difficulties in SCM due to local v/s system wide (global) optimization and uncertainties in demand and transportation; Bull-whip effect; customer value; IT, info-sharing and strategic partnerships; plant and warehouse-network configuration; supply contracts and revenue sharing; outsourcing; transportation, cross docking and distribution, forecasting models in SCM; coordination and leadership issues; change of purchasing role and vendor rating, variability from multiple suppliers.

(10 hours)

**UNIT 3**

Registrar  
Sri Satya Sai University of Technology  
& Medical Sciences Sehore (M.P.)

108

**Inventory models:** Necessity of inventory in process and safety stock, problem of excess inventory and cycle time (=WIP/ Throughput), JIT/ lean mfg; basic EOQ/ EPQ models for constant review Q-system(S,s); periodic review, base stock P-system; service level, lead time variance and safety stock; ABC, VED and other analysis based on shelf life, movement, size. MRP technique and calculations, lot sizing in MRP, linking MRP with JIT; evolution of MRP to ERP to SCM and e-business.

(9 hours)

#### UNIT 4

**Waiting Line Models** Introduction, Input process, service mechanism, Queue discipline, single server (M/M/1) average length and times by Little's formula, optimum service rate; basic multiple server models (M/M/s) (b) **Competitive strategy:** concept and terminology, assumptions, pure and mixed strategies, zero sum games, saddle point, dominance, graphical, algebraic and LP methods for solving game theory problems.

(9 hours)

#### UNIT 5

**Decision analysis:** decision under certainty, risk probability and uncertainty; Hurwicz criteria; AHP-assigning weight and consistency test of AHP (b) **Meta-heuristics** Definition of heuristic and meta-heuristic algorithms; introduction to Tabu search, Simulated Annealing and Genetic algorithms and solution of traveling salesman and non linear optimization problems.

(9 hours)

MEA-605 (B)	Ergonomics Engineering	3L:0T:0P	03 credits	3Hrs/Week
-------------	------------------------	----------	------------	-----------

**Course Preamble:**

This course introduces the role of Work Study in the industry and how productivity issues in the industry can be addressed by the application of Work Study, while stimulating critical thinking on the techniques of Method Study and Work Measurement. The course also introduces the concept of conducting time studies and production studies to assess time standards and production standards for fulfilling production goals in an organization. The course further introduces the scope of ergonomics and the application of ergonomic principles to workplace design and work organization and culminates with the concept of evaluating the impact of various human factors to design of safe workplace environment.

**Course Outcome:**

The students will be able to:

1. develop a case for productivity improvement in any manufacturing or service industry scenario
2. Independently conduct a method study in any organization with the objective of improving a process, material movement system or design of a work place
3. develop time standards for operations, identify production bottlenecks and improvise operations
4. apply principles of good ergonomic design of work areas and equipment
5. Identify, explain and evaluate the impact of various personal attributes (anatomical, physiological and anthropometric) on proper safe working practice

**UNIT 1**

**General:** Man in industrial work environments, Ergonomics as multidisciplinary fields, Importance and justification and ergonomics problems, Man-machine-environment system.

(8 hours)

**UNIT 2**

**Anthropometry:** Significance of human body measurement in design of equipment, Facilities, Work place and operation, Static and dynamic anthropometry, Anthropometric data. **Task Analysis:** Task description, Posture measurement, RULA & REBA analysis and evaluation, Lifting & lowering tasks, Lifting index, Lifting & carrying tasks, NIOSH lifting equation.

(9 hours)

**UNIT 3**

**Biomechanics:** Introduction to levers of Human Body, Ligaments & Tendons, Joints. Kinetics to include forces producing motion.

(8 hours)

Registrar

Sri Satya Sai University of Technology  
& Applied Sciences Sehore (M.P.)

110

#### UNIT 4

**Man-Environment Interface:** Environmental factors of temperature, Humidity, Lighting and noise in industry. Effect of environmental factors on human performance, Measurement and mitigation of physical and mental fatigue, Basics of environment design for improved efficiency.

(9 hours)

#### UNIT 5

**Design of Display and Control:** Need for information display. Elements of information theory, Reaction time, Methods and types of displays, Design of audio and visual displays, Design of hand and foot operated control device. Design of human-computer interface.

(9 hours)

## SEMESTER –VII

MEA-701	MECHANICAL VIBRATION AND NOISE ENGINEERING	3L:0T:0 P	03 credits	3Hrs/Week
---------	---	--------------	------------	-----------

### Course Preamble:

1. To state the importance Mechanical Vibrations
2. To make the students aware about various modeling techniques helpful in imitating a Mechanical system.
3. To give them practical exposure of Elements of a Vibrating system
4. To tell them about applications of Elements of a Vibrating system
5. To make students learn the harmful effects of vibrations and techniques required to make system safe from its ill effects.

### Course Outcomes

1. The principle and working of Elements of a Vibrating system
2. Formulation of Workable model of a Vibrating system
3. Formulations and solution of equations of motion for various types of vibrating systems
4. Methods to bring reduction in the levels of vibration in system to which they are harmful by learning to design vibration controlling Mechanical systems

### Unit I

**Fundamental Aspects of Vibrations:** Vibration, main causes, advantages and disadvantages; engineering applications of vibration and noise; vector method of representing harmonic motion; characteristics of vibration, harmonic analysis and beats phenomenon, work done by harmonic forces on harmonic motion; periodic, non-harmonic functions- Fourier series analysis; evaluation of coefficients of Fourier series; elements of vibratory system; lumped and distributed parameter systems.

**Undamped Free Vibrations:** Derivation of differential equation of motion: the energy method, the method based on Newton's second law of motion, and Rayleigh's method. Solution of differential equation of motion: Natural frequency of vibration. Systems involving angular oscillations: the compound pendulum.

(10 hours)

### Unit II

**Damped Free Vibrations:** Viscous damping: coefficient of damping; damping ratio-Under damped, over damped and critically damped systems; logarithmic decrement; frequency of damped free vibration; Coulomb or dry friction damping; frequency, decay rate and comparison of viscous and Coulomb damping; solid and structural damping; slip or interfacial damping.

  
Registrar

Gri Satya Sai University of Technology  
& Medical Sciences Sehore (M.P.)

(9 hours)

### Unit III

**Harmonically excited Vibration:** One degree of freedom- forced harmonic vibration; vector representation of forces; excitation due to rotating and reciprocating unbalance; vibration Isolation, force and motion transmissibility; absolute and relative motion of mass (Seismic Instruments ). Whirling Motion and Critical Speed : Whirling motion and Critical speed : Definitions and significance .Critical - speed of a vertical. Critical speed of a shaft carrying multiple discs (without damping ), Secondary critical speed.

(9 hours)

### Unit IV

**Systems With Two Degrees of Freedom :** Principal modes of vibration; torsion vibrations; Forced, Un-damped vibrations with harmonic excitation ; Coordinate coupling; Dynamic vibration absorber; torsion Vibration Absorber; Pendulum type of dynamic vibration.

(8 hours)

### Unit V

**Noise Engineering** -Subjective response of sound: Frequency and sound dependent human response; the decibel scale; relationship between, sound pressure level (SPL), sound power level and sound intensity scale; relationship between addition, subtraction and averaging.  
**Noise: Sources, Isolation and Control:** Major sources of noise on road and in industries, noise due to construction equipments and domestic appliances, industrial noise control strategies- noise control at source (with or without sound enclosures)

(9 hours)

MEA-701	MECHANICAL VIBRATION AND NOISE ENGINEERING	0L:0T:2P	1 credits	2Hrs/Week
---------	--	----------	-----------	-----------

**List of Experiments:-**

- 1- To find out effect of load on natural frequency of vibrations of a lever pin supported at one end carrying adjustable load on a vertical screwed bar and spring supported at some intermediate point (i) When the dead weight of rods is neglected and (ii) when their dead weight is taken into account .
- 2- To find out frequency of damped free vibration and rate of decay of vibration-amplitude in the system.
- 3- To find out natural frequency and damped free frequency of a torsion pendulum and , hence to find out coefficient of damping of the oil ;
- 4- To observe the phenomenon of whirl in a horizontal light shaft and to determine the critical speed of the shaft.
- 5- To observe the mode shapes of a spring-connected, double pendulum and hence to demonstrate the phenomenon of beats.
- 6- To demonstrate the principle of tuned Undamped Dynamic Vibration Absorber and to determine the effect of mass-ratio (of main and auxiliary mass) on the spread of the resulting natural frequencies ;
- 7- To take measurements of sound Pressure Level (SPL) and to carry out octave band analysis of a machine using Noise Level Meter.

MEA-702	AUTOMOBILE ENGINEERING	3L:0T:0P	03 credits	3Hrs/Week
---------	------------------------	----------	------------	-----------

**Course Preamble:**

1. To understand the basic concepts about automobile and performance parameters.
2. To understand the working of engine and its sub-systems.
3. To understand about function, necessity and working of various types of clutches. Selection for different application.
4. To understand power transmission from engine to tyres. Conversions at different stages, understanding working of different sub-systems in transmission to understand the power flow.
5. To understand working of various control systems like suspension, steering and brakes.
6. To understand the environmental impacts and study various means emission control from automobile.

**Course Outcomes**

1. Basic understanding about working of automobile
2. Understanding, importance of various sub-systems in performance of automobile
3. Understand importance of control in automobile
4. Environmental friendly automobiles

**Unit-I:**

**Chassis & Body Engg:** Types, Technical details of commercial vehicles, types of chassis, lay out, types of frames, testing of frames for bending & torsion on unutilized body frame, vehicle body and their construction, drivers visibility and methods for improvement, safety aspects of vehicles, vehicle aerodynamics, optimization of body shape, drivers cab design, body materials, location of engine, front wheel and rear wheel drive, four wheel drive.

(10 hours)

**Unit-II**

**Steering System:** front axle beam, stub axle, front wheel assembly, principles of types of wheel alignment, front wheel geometry viz. camber, Kingpin inclination, castor, toe-in and toe out, condition for true rolling motion, center point steering, directional stability of vehicles, steering gear, power steering, slip angle, cornering power, over steer & under steer, gyroscopic effect on steering gears.

(9 hours)

**Unit-III**

**Transmission System:** Function and types of clutches, single plate, multi-plate clutch, roller & spring clutch, clutch lining and bonding, double declutching, types of gear Boxes, synchronous gear materials, determination of gear ratio for vehicles, gear box performance at different vehicle speeds, constant mesh transmission, torque converters, fluid coupling, principle of hydrostatic drive, propeller shaft, constant

velocity universal joints, differential gear box, rear axle construction.

#### Unit-IV

(9 hours)

**Suspension system**: Basic suspension movements, Independent front & rear suspension, shock absorber, type of springs: leaf spring, coil spring, air spring, torsion bar, location of shackles, power calculations, resistance to vehicle motion during acceleration and braking, power & torque curve, torque & mechanical efficiency at different vehicle speeds, weight transfer, braking systems, disc theory, mechanical, hydraulic & pneumatic power brake systems, performance, self-energisation, airbleeding of hydraulic brakes, types of wheels and tyres, tyre specifications, construction and material properties of tyres & tubes.

(10 hours)

#### Unit-V

**Electrical and Control Systems**: storage battery, construction and operation of lead acid battery, testing of battery, principle of operation of starting mechanism, different drive systems, starter relay switch, regulator electric fuel gauge, fuel pump, horn, wiper, Lighting system, head light dazzling, signaling devices, battery operated vehicles, choppers, importance of maintenance, scheduled and unscheduled maintenance, wheel alignment, trouble Shooting probable causes & remedies of various systems, microprocessor based control system for automobile, intelligent automobile control systems.

(10 hours)

#### Unit-VI

**Emission standards and pollution control**: Indian standards for automotive vehicles- Bharat I and II, Euro-I and Euro-II norms, fuel quality standards, environmental management systems for automotive vehicles, catalytic converters, fuel additives, and modern trends in automotive engine efficiency and emission control. (8 hours)

MEA-703 (A)	DESIGN OF HEAT EXCHANGERS	3L:0T:0P	03 credits	3Hrs/Week
----------------	---------------------------	----------	------------	-----------

**Course Preamble:**

1. Introducing of various types of heat exchangers providing heat transfer between two or more fluids and acquiring necessary information for the design of heat exchangers.

**Course Outcomes:**

At the end of this course students will have the ability of:

1. Learning the essentials and basic concepts of heat exchangers,
2. Learning heat exchanger types and selection criteria of heat exchanger according to usage area,
3. Capability to do thermal, pressure drop, strength, and cost analysis of heat exchangers

**Unit I**

**Introduction:** Types of heat exchangers heat transfer laws applied to heat exchangers convection Coefficients, resistance caused by the walls and by fouling, overall heat transfer coefficient.

(10 hours)

**Unit II**

**Thermal & hydraulic design of commonly used heat exchangers:** LMTD & NTU Methods, correction factors, Double pipe heat exchangers, shell and tube heat exchangers, condensers, Evaporators, Cooling and dehumidifying coils, cooling towers, evaporative condensers, design of air washers, desert coolers.

(10 hours)

**Unit III**

**TEMA standard:** Tubular heat exchangers TEMA standard heat-exchanger nomenclature, selection criteria for different types of shells and front and rear head ends; geometrical characteristics of TEMA heat exchangers.

(8 hours)

Registrar  
Sri Satya Sai University of Technology  
& Medical Sciences Sehore (M.P.)

Unit IV

Review of mechanical Design, Materials of Construction, corrosion damage, testing and inspection

(7 hours)

Unit V

Heat Pipe: Basics & its mathematical model, micro Heat Exchangers , Use of Software in heat exchanger design.

(7 hours)

MEA-703 (B)	Industrial Robotics	3L:0T:0P	03 credits	3Hrs/Week
-------------	---------------------	----------	------------	-----------

**Course Preamble:**

1. To understand the basic concepts associated with the design and Functioning and applications of Robots
2. To study about the drives and sensors used in Robots To learn about analyzing robot kinematics and robot programming.

**Course Outcomes:**

1. Upon completion of this course, the students can able to apply the basic engineering
2. To learn about knowledge for the design of robotics.
3. Will understand robot kinematics and robot programming.
4. Will understand application of Robots
5. To learn about force and torque sensing
6. To learn about application of robot.

**Unit I**

INTRODUCTION: Need and importance, basic concepts, structure and classification of industrial robots, terminology of robot motion, motion characteristics, resolution, accuracy, repeatability, robot applications.

(8 hours)

**Unit II**

END EFFECTORS AND DRIVE SYSTEMS: Drive systems for robots, salient features and comparison, different types of end effectors- Mechanical - Magnetic - Vacuum - Adhesive - Drive systems and controls; design and applications of end effectors.

(10 hours)

**Unit III**

SENSORS: Sensor evaluation and selection, Piezoelectric sensors, linear position and Displacement, sensing, revolvers, encoders, velocity measurement, proximity, tactile, compliance and range sensing, Image Processing and object recognition.

(8 hours)

**Unit IV**

INDUSTRIAL APPLICATIONS: Application of robots in manufacturing, processing operations like Welding, painting, Assembly, machining, Welding, Assembly, Material transfer and machine loading/unloading, CIM and hostile and remote environments, safety considerations.

(10 hours)

**Unit V**

SAFETY AND ECONOMY OF ROBOTS: Work cycle time analysis, economics and

MEA-704 (A)	PROJECT MANAGEMENT	3L:0T:0P	03 credits	3Hrs/Week
-------------	--------------------	----------	------------	-----------

**Course Preamble:**

The objectives of this course are to:

1. To make them understand the concepts of Project Management for planning to execution of projects.
2. To make them understand the feasibility analysis in Project Management and network analysis tools for cost and time estimation.
3. To enable them to comprehend the fundamentals of Contract Administration, Costing and Budgeting.
4. Make them capable to analyze, apply and appreciate contemporary project management tools and methodologies in Indian context

**Course Outcomes:**

On completion of this course, the students will be able to:

1. Understand project characteristics and various stages of a project.
2. Understand the conceptual clarity about project organization and feasibility analyses – Market, Technical, Financial and Economic.
3. Analyze the learning and understand techniques for Project planning, scheduling and Execution Control.
4. Apply the risk management plan and analyze the role of stakeholders.
5. Understand the contract management, Project Procurement, Service level Agreements and productivity.
6. Understand the How Subcontract Administration and Control are practiced in the Industry.

**Unit I**

Concepts of project management:: Meaning, definition and characteristics of a project, technical and socio-cultural dimensions: project life cycle phases, project planning and graphic presentation; work breakdown structure, manageable tasks; size of network; blow down NW; identity and logic dummy activity; Fulkerson rule for numbering NW; time-scaled NW.

(10 hours)

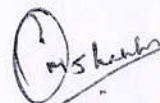

**Unit-II**

NW analysis: PERT network; mean time and variances; probability to complete PERT project in specified time; CPM network; Event Occurrence Time (EOT); activity start/ finish times; forward and reverse path calculations, concept and calculation of floats; resource allocation and critical-chain; overview of MS-project-2000.

(9 hours)

  
Registrar  
Sri Sathya Sai University of Technology  
& Medical Sciences, Puttaparthi (M.P.)

  
122

### Unit-III

Project duration and control; Importance and options to accelerate project completion; timecost tradeoff; fixed variable and total costs; use of floats and cost optimization; project performance measures; project monitoring info and reports; project control process; Gant chart and control chart; cost-schedule S-graph; planned cost of work schedule (PV).

(9 hours)

### Unit-IV

Project organization, culture and leadership: projects within functional organization; dedicated project/task-force teams: staff, matrix and network organization; choosing appropriate project organization; Organization culture; ten characteristics; cultural dimensions supportive to projects; social network and management by wandering around (MBWA); different traits of a manager and leader; managing project teams; five stage team development model.

(9 hours)

### Unit-IV

Strategic planning and project appraisal; Capital allocation key criteria; Porters competitive strategy model; BCG matrix; Strategic Position Action Evaluation (SPACE); time value of money; cash flows; payback period; IRR; cost of capital; NPV; social cost benefit analysis; UNIDO approach; project risks and financing.

(9 hours)

MEA-704 (B)	NANO MANUFACTURING	3L:0T:0P	03 credits	3Hrs/Week
-------------	-----------------------	----------	------------	-----------

**Course Preamble:**

1. To understand the scope of micro and nano technology;
2. To understand the concepts and Applications of micro- and nanofabrication
3. To understand Nano technology in India
4. To understand the scope for Micro fabrication
5. To understand commercialization Issues of Micro-Nano Technology

**Course outcome:**

1. Students will have a complete understanding of scope, concepts and applications
2. Micro and Nano technology in the field of manufacturing.

**Unit-I**

Introduction to Nano-manufacturing and Nanotechnology. Advantages, disadvantages and applications of Nanotechnology and Nano-manufacturing. Top-down and Bottom-up techniques.

(9 hours)

**Unit-II**

Self-Assembly, self-assembled monolayer, Characterization Techniques: Scanning Electron Microscope, Transmission Electron Microscope, Atomic force microscopy (AFM), Scanning Probe Microscope (SPM).

(8 hours)

**Unit-III**

Scanning Tunneling Microscope (STM), X-ray Diffraction (XRD), Nano-lithography: Photolithography, UV Photolithography, X-ray Lithography, Electron Beam Lithography, Particle Beam Lithography's, Probe lithography's.

(10 hours)

**Unit-IV**

Micro and Nano machining, Focused Ion beam machining, Chemical methods in Nano manufacturing, Si processing methods: Cleaning /etching, Epitaxy, Molecular-beam epitaxial, chemical beam epitaxial.

(8 hours)

## SEMESTER –VIII

MEA-801	REFRIGERATION & AIR CONDITIONING	3L:0T:0P	03 credits	3Hrs/Week
---------	-------------------------------------	----------	------------	-----------

### Course Preamble:

1. To know about the different refrigeration cycles
2. Understand the hardware related to the refrigeration systems
3. Understand how the different components harmonize together
4. Understand the importance of the auxiliary systems.

### Course Outcomes:

Upon successful completion of the course, students should be able to:

1. Have a review of refrigeration cycles and alternate refrigeration system to enhance their knowledge of refrigeration, and will be able to explain them.
2. Understand and solve the problem of component selection, refrigerant related issues and system balancing and control
3. Apply their knowledge to appraise different refrigeration system components and environmental issues caused by refrigerant.
4. Analyze a refrigeration problem to carryout necessary calculation.

### Unit-I

**Introduction:** Principles and methods of refrigeration, freezing; mixture cooling by gas reversible expansion, throttling, evaporation, Joule Thomson effect and reverse Carnot cycle; unit of refrigeration, coefficient of performance, vortex tube & thermoelectric refrigeration, adiabatic demagnetization; air refrigeration cycles- Joule's cycle Boot-strap cycle, reduced ambient cycle and regenerative cooling cycles.

(10 hours)

### Unit-II

**Vapour compression system:** Vapor compression cycle, p-h and t-s diagrams, deviations from theoretical cycle, sub-cooling and super heating, effects of condenser and evaporator pressure on cop; multi- pressure system: removal of flash gas, multiple expansion & compression with flash inter cooling; low temperature refrigeration: production of low temperatures, cascade system, dry ice, production of dry ice, air liquefaction system.

(10 hours)

### Unit-III

**Vapour absorption system:** Theoretical and practical systems such as aqua- ammonia, electrolux & other systems; (b) Steam jet refrigeration: Principles and working, simple cycle of operation, description and working of simple system (c) refrigerants: nomenclature & classification, desirable

properties, common refrigeration, comparative study, leak detection methods, environment friendly refrigerants and refrigerant mixtures, brine and its properties.

(9 hours)

#### Unit-IV

**Psychrometric** Calculation of psychrometric properties of air by table and charts; psychrometric processes: sensible heating and cooling, evaporative cooling, cooling and dehumidification, heating and humidification, mixing of air stream, sensible heat factor; principle of air conditioning, requirements of comfort air conditioning, ventilation standards, infiltrated air load, fresh air load human comfort, effective temperature & chart, heat production & regulation of human body.

(8 hours)

#### Unit-V

**Air conditioning loads**: calculation of summer & winter air conditioning load, bypass factor of coil, calculation of supply air rate & its condition, room sensible heat factor, grand sensible heat factor, effective sensible heat factor, dehumidified air quantity. Problems on cooling load calculation, Air distribution and ventilation systems.

(8 hours)

MEA-801	REFRIGERATION & AIR CONDITIONING	0L:0T:2P	1 credits	2Hrs/Week
---------	-------------------------------------	----------	-----------	-----------

**List of Experiments:-**

1. General Study of vapor compression refrigeration system.
2. General Study of Ice Plant
3. General Study and working of cold st
4. General Study One tone Thermax refrigeration unit.
5. General Study of Water cooler
6. General Study of Psychrometers (Absorption type)
7. General Study of window Air Conditioner.
8. General Study and working of Vapor compression Air conditioning Testrig.
9. Experimentation on Cold Storage of Calculate COP & Heat Loss.
10. Experimentation on Vapor compression Air Conditioning test rig.

MEA-802 (A)	ADVANCE MACHINE DESIGN	3L:0T:0P	03 credits	3Hrs/Week
----------------	---------------------------	----------	------------	-----------

**Course Preamble:**

To familiarize the various steps involved in the design process of mechanical drives such

1. As belt, chain, rope and gear.
2. To understand the procedure of selection of machine elements from manufacturers
3. Catalogue.
4. To get knowledge of different types of bearings and their selection for a particular
5. Application.
6. Student shall apply design knowledge of the different types of elements used in the
7. Machine design process, for a design project.

**Course outcomes**

1. Design and analyze belts, brakes, clutches.
2. Understand gear drives and their applications; design procedure and introduction to gear
3. Design standard practices.
4. The construction, working, important features and selection process from manufacturers
5. Catalogue for rolling contact bearings
6. Analyze the pressure distribution and design of journal bearings..
7. Acquire skill in preparing production drawing pertaining to various designs.

**Unit I**

**Design of Belt, Rope and Chain Drives:** Methods of power transmission, selection and design of flat belt and pulley; Selection of V-belts and sleeve design; Design of chain drives, roller chain and its selection; Rope drives, design of rope drives, hoist ropes.

(8 hours)

**Unit II**

**Spur and Helical Gears:** Force analysis of gear tooth, modes of failure, beam strength, Lewis equation, form factor, formative gear and virtual number of teeth; Gear materials; Surface strength and wear of teeth; strength against wear; Design of straight tooth spur and Helical Gears.

**Bevel Gears:** Application of bevel, formative gear and virtual number of teeth; Force analysis; Lewis equation for bevel gears; Strength against wear; Design of bevel gear.

(8 hours)

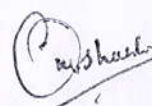

**Unit III**

**Design of I.C. Engine Components:** General design considerations in I C engines; design of cylinder; design of piston and piston-rings; design of connecting rod; design of crankshaft.

(8 hours)

  
Registrar  
Sri Satya Sai University of Technology  
& Medical Sciences, Warangal (M.P.)

Unit IV

**Design of Miscellaneous Components:** design of Flanged coupling; Rigid coupling, Design of Pressure vessels subjects to internal pressure, external pressure, design of penetration, design of flanges, cone cylinder junctions .Materials, Fabrication.

(9 hours)

Unit V

**Optimization:** Basic concept of optimization, classification of optimization, **optimization techniques,** engineering applications of optimization. Classical optimization techniques: unconstrained optimization single-variable optimization, multivariable optimization, solution by direct search method, solution by Lagrange-multipliers method.

(10 hours)

Note: PSG Design data book and/ or Mahadevan and Reddy's Mechanical design data book are to be provided/ permitted in exam hall (duly verified by authority).

MEA-802 (B)	COMPUTER INTEGRATED MANUFACTURING	3L:0T:0P	03 credits	3Hrs/Week
-------------	-----------------------------------	----------	------------	-----------

**Course Preamble:**

1. Students will be introduced to CAD/CAM/CAE concepts.
2. Student will learn steps in upgrading from FMS to CIM.
3. Students will learn about importance of data generation and management in CIMS.

**Course outcomes:**

1. Students will be able to apply knowledge about Computer Aided Quality control and Process Planning Control.
2. Students will be able to Design Flexible manufacturing cell after carrying out Group technology study and finally creating FMS.
3. Students will be able to apply knowledge about various methods of communication in CIMS.
4. They will be able to apply data management and its importance for decision making in CIMS environment.

**Unit I**

**Introduction** N.C. System: Definition, applications, Historical background Role of Computers in Manufacturing, Computer Numerical control in CAM: Definition, basic components of CAM system, Procedure, Co-ordinate system, motion control systems, Advantages of CNC system.

(9 hours)

**Unit II**

**Introduction** of CNC Machine tools, Application of CNC systems, Economics of CNC machining centers, Part Programming : CNC part programming : manual part programming.

(9 hours)

**Unit III**

**Introduction** computer aided part programming Robot Technology: Introduction, Industrial Robots, Robot physical Configuration, Basic Robot motions, Technical features, such as work volume, precision of movement speed o movement, weight carrying capacity, type of drive systems, Programming of the robot, Introduction to robot languages, End effectors, work cell control and interlocks, Robotic sensors, Robot applications & economics, Intelligent robots, interfacing of a vision system with a Robot.

(10 hours)

**Unit IV**

**Introduction** Definition and broad characteristics of Flexible Manufacturing Cells, Group technology Systems FMS hardware CNC machine tools, robots, AGVs, ASRs, Inspection and Cleaning stations - Control aspects of FMS-DNC of machine tools, cutting tools, Types of Flexibility

  
**Registrar**  
 Satya Sai University of Technology  
 & Medical Sciences Sehore (M.P.)

in FMS, Flexible and Dynamic Manufacturing Systems, Computer Aided Inspection.

(9 hours)

#### Unit V

**Introduction** Principles and interfacing, software metrology. Applications of Lasers in precision measurements - Laser interferometer, speckle measurements, laser scanners, Coordinate Measuring Machine - Types of CMM - Probes used - Applications - Non contact CMM using Electro optical sensors for dimensional metrology - Non contact sensors for surface finish measurements. Image processing and its application in inspection.

MEA-803 (A)	INDUSTRIAL ORGANISATION & MANAGEMENT	3L:0T:0P	03 credits	3Hrs/Week
----------------	--	----------	------------	-----------

**Course Preamble:**

This course introduces the basic concepts of management and organization structure of an industry, concept of Entrepreneurship, Material management cost analysis, engineering economics and project management

**Course Outcomes:**

Student shall be able to:

1. Demonstrate the concepts of Management and organizational structure
2. Understand the economic and operations management concepts useful in the production process.
3. Apply the project management tools in effective development and implementation of the business activities.
4. Develop the entrepreneurial spirit and plan to start their own enterprise.

**Unit-I**

Industrial Evolution in India: Downfall of early industries, evolution of modern industry, effects of partition, industrial policy and progress after independence. Forms of Industrial Organization: Single Proprietorship, Partnership, Joint Stock companies., Cooperatives and State Enterprises.

(8 hours)

**Unit-II**

Growth of Industry and Management: Meaning of industrial management, functions and tools of management, growth of management concepts. Principles of Management: Management, different functions of management: Planning, organizing, coordination and control, Structure of an industrial organization.

(8 hours)

**Unit-III**

Functions of different departments. Relationship between individual departments. Human and Industrial Relations, Human relations and performance in organization. Understand self and others for effective behavior, Behavior modification techniques, Industrial relations and disputes, Relations with subordinates, peers and superiors, Characteristics of group behavior and trade unionism.

(10 hours)

Registrar  
Satya Sai University of Technology  
& Medical Sciences Sehore (M.P.)

*(Signature)*

#### Unit-IV

Professional Ethics: Concept of ethics, Concept of professionalism, Need for professional ethics. Code of professional ethics, Typical problems of professional engineers, Professional bodies and their role.. Motivation: Factors determining motivation, Characteristics of motivation, Methods for improving motivation, Incentives, pay, promotion, rewards, Job satisfaction and job enrichment.

(9 hours)

#### Unit-V

Leadership: Need for leadership, Functions of a leader, Factors for accomplishing effective leadership, Manager as a leader. Human Resource Development: Introduction, Staff development and career development, Training strategies and methods. Accidents and Safety: Classification of accidents; according to nature of injuries i.e. fatal, temporary; according to event and according to place.

MEA-803 (B)	COMPUTATIONAL FLUID DYNAMICS	3L:0T:0P	03 credits	3Hrs/Week
----------------	---------------------------------	----------	------------	-----------

**Course Preamble:**

To provide brief introduction of Computational Fluid Dynamics along with chemical engineering application specifically, analysis of fluid mechanics and heat transfer related problems.

**Course Outcomes:**

Upon completion of this course, the students will be able to: 1. Solve PDE. 2. Use Finite Difference and Finite Volume methods in CFD modeling 3. Generate and optimize the numerical mesh 4. Simulate simple CFD models and analyze its results.

**Unit-I**

Introduction: Mathematical Background: Classification of differential equations, representative differential equations for heat transfer and fluid flow; Boundary and initial condition; Integral forms. Survey of Numerical Methods Used in Heat Transfer and Fluid Mechanics.

(8 hours)

**Unit-II**

Finite Difference Methods Basic concepts, Direct approximation approach, Taylor series, Control Volume approach, Truncation error, Discretization and round off errors; convergence, numerical stability. Solution of simultaneous equations, Transient diffusion. Finite Element Methods: Steps for FEM solution. Fundamentals, Assembly, Steady Diffusion, Transient Diffusion Finite Volume Methods: Problem formulation for one-dimensional convection diffusion equations.

(10 hours)

**Unit- III**

Simulation of Transport Process Conduction Heat Transfer: Steady and unsteady state one & two dimensional problems. Explicit, Implicit and Crank-Nicolson scheme, ADI and ADE methods. Convection Heat Transfer: Boundary Layer Flows. Similarity solutions, Derived Variables, Patankar/Spalding Methods for two-dimensional flows.

(8 hours)

Registrar  
Sree Sastha Institute of Technology  
& Medical Sciences Sehora (M.P.)

#### Unit- IV

**Elliptic Solutions:** Control Volume formulation, Energy and other scalar equations, Momentum equations, Segregated Solution method; SIMPLE & SIMPLER schemes, Stream Function – Vorticity.

(8 hours)

#### Unit-V

**Transport method.** Turbulence: Examples of turbulent flows, Stress relations, Reynolds stresses, turbulence model computations, Analogy between Heat Transfer and Momentum, Linearization of source terms.

(9 hours)

(Minutes of the Board of Studies Committee Meeting)

School Of Engineering

Department of Mechanical Engineering

Board of Studies Meeting of Mechanical Engineering Department was conducted on 25.09.2020 at 1.30 PM by online mode through Google Meet, Following members were present.

1. Mrs. Priyanka Jhaver (Chairman)
2. Dr. G.R.Selokar (Member)
3. Dr. Subhasis Bose (Member)
4. Dr. Nilesh Diwakar (Member)
5. Mr. Anil Verma (Member)
6. Mr. Sachin Baraskar (Member)
7. Mr. Dhananjay Yadav (Member)
8. Dr. Vilas Warudkar (External Academic Expert MANIT, Bhopal)
9. Dr. A.C. Tiwari (External Academic Expert UIT RGPV)
10. Mr. Surendra Mittal (External Industry Expert, MD, Fitwell Fasteners)

### Minutes of Meeting:

1. **Dr. Nilesh Diwakar**, Member of BOS opened the meeting by welcoming and introducing the external members, to the internal and co-opted members and thanked them for accepting to become the member of the Board of Studies
2. The B.E. (Mechanical) Curriculum for IIIrd & IVth year (based on AICTE Model curriculum) with scheme & syllabus were presented by **Dr. Nilesh Diwakar, Prof & Dean (SOE)** Member of Board of Studies
  - I. **Dr. Nilesh Diwakar** expressed their concern about motivating students towards domain specific courses in 5th semester and discuss about 8th semester courses
  - II. **Dr. A.C. Tiwari** gathered the information and suggested to include some content based on e-vehicle on a part of curriculum keeping in view the utility of Advanced knowledge in Automobiles near future.
  - III. Contents of core electives course should be revisited keeping in view of present and future demand in Mechanical field, suggested by **Dr. A.C. Tiwari**.
  - IV. **Dr. Vilas Warudkar** suggested to include Entrepreneurship in 7<sup>th</sup> sem for the better future of students was replace by open elective MEA 704(A) Project Management.

6. Mr. Sachin Baraskar, Assistant Professor (Mechanical Engineering), Member
7. Dr. G. Dixit (External Member)
8. Dr. Nitin Shrivastava (External Member)

The Chairman of Board of Studies Committee welcomes and appreciated the efforts put up by the faculty for progress of the department activities. The following Agenda point were discussed and resolved

## Agenda Preparation of Syllabus and Scheme for 3rd semester (Thermal Engineering)

### Discussion Scheme and Syllabus

The Internal members of the Committee suggested that the Scheme and Syllabus should be prepared as per current demand in industry and academics.

The External members (Academic Expert) suggested for Modelling And Analysis of I.C. Engine subjects should be added as an elective.

Registrar

Sri Satya Sai University of Technology  
& Medical Sciences, Sehore (M.P.)

### Resolution of the Discussion

On the basis of discussion the following amendments were made:

Scheme and Syllabus was prepared as per current demand in industries.

The Modelling And Analysis of I.C. Engine.. have been added as an elective Subject.

The chairman thanks the member for peaceful conduction of meeting.

### Signature of All members (Including Chairman)

**MTE-301 Thermal Power Plant Engg.**

**UNIT 1**

Conventional thermal power plants, super-critical power plants and its principles of working, performance curves and flow diagrams. Type of boiler Working and Principle

**UNIT 2**

Power plant components: Fuel and ash handling, pulverized fuel firing burners, dust handling, fluidized bed combustion. Radiant super heaters and re-heaters, economizer and pre-heaters, combustion and furnace design, boiler water supply and treatment. Draught and arrangement of draught fans, different types of cooling systems, open closed, mixed and dry cooling tower systems, air cooled condensers. Ejector and vacuum pumps, feed heating systems, heaters, evaporators and de-minerator, feed line protection, boiler feed pumps, different type of drives for it, steam turbine driven feed pumps.

**Unit 3**

Plant instrumentation for thermal power plants, need and importance, distributed and centralized, pneumatic and electro-mechanical transducers and controllers, distributed computer control. Piping and insulation: design and layout of ducting for air fuel, gases and pulverized fuels, selection of piping, pipe flexibility analysis, Various control valves and actuators. Insulation optimum thickness and costs.

**Unit 4**

Installation, commissioning and operation: Preliminary performance checks and acceptance test for various components, heat balance of items and entire plant. Starting loading and normal operation checks, maintenance logging, parallel operations, droop setting, performance analysis, maintenance, safety and pollution controls.

**UNIT 5**

Plant Management: Preparing specifications and contract documents, guarantee, Training of power plant personnel, safety, and seismic analysis. Purchase and contract for fuel supplies.

**MTE- 301 (B) COMPUTATIONAL FLUID DYNAMICS**

**UNIT - I**

**INTRODUCTION:** Finite difference method, finite volume method, finite element method, governing equations and boundary conditions. Derivation of finite difference equations.

**Solution methods:** Solution methods of elliptical equations — finite difference formulations, iterative solution methods, direct method with Gaussian elimination, Parabolic equations—explicit schemes and Von Neumann stability analysis, implicit schemes, alternating direction implicit schemes, approximate factorization, fractional step methods, direct method with tridiagonal matrix algorithm.

**UNIT - II**

**Hyperbolic equations:** explicit schemes and Von Neumann stability analysis, implicit schemes, multi step methods, nonlinear problems, second order one-dimensional wave equations, Burgers equations. Explicit and implicit schemes, Runge-Kutta method.

**UNIT - III**

**FORMULATIONS OF INCOMPRESSIBLE VISCOUS FLOWS:** Formulations of incompressible viscous flows by finite difference methods, pressure correction methods, vortex methods.

**Treatment of compressible flows:** potential equation, Euler equations, Navier-stokes system of equations, flow field-dependant variation methods, boundary conditions, example problems.

**UNIT - IV**

**FINITE VOLUME METHOD:** Finite volume method via finite difference method, formulations for two and three-dimensional problems.

**UNIT - V**

**STANDARD VARIATIONAL METHODS:** Linear fluid flow problems, steady state problems, Transient problems.

**UNIT 1**

Types of Heat Exchangers, definitions & quantitative relationship, Basic design methods for heat exchanger- Design of shell and tube type heat exchanger, Recent developments in heat exchangers.

**UNIT 2**

Analytical & Numerical solution Procedures, Fouling factors, Correction factors **Computerized methods for design and analysis of heat exchanger** Performance enhancement of heat exchanger, fouling of heat exchanger. Testing, evaluation and maintenance of heat exchanger.

**UNIT 3**

**Thermal & hydraulic design of Commonly used heat exchangers** : Double pipe heat exchangers , , condensers, Evaporators, Cooling and dehumidifying coils, Cooling towers, Evaporative condensers , design of air washers , desert coolers .

**UNIT 4**

Review of mechanical Design, TEMA Codes Materials of Construction , corrosion damage , Testing and inspection . **Power plant heat exchanger**, heat exchanger for heat recovery at low, medium and high temperatures

**UNIT 5**

**Heat Pipe: Basics & Its mathematical model** , micro Heat Exchangers. Furnaces, Radiative heat exchangers , **Use of software in heat exchanger design**.

**Reference Books:**

**MTE -302 (B) SOLAR ENERGY TECHNOLOGY**

**UNIT - I**

**Introduction** – Solar energy option, specialty and potential – Sun – Earth – Solar radiation, beam and diffuse – measurement – estimation of average solar radiation on horizontal and tilted surfaces – problems – applications. Capturing solar radiation – physical principles of collection – types – liquid flat plate collectors – construction details – performance analysis – concentrating collection – flat plate collectors with plane reflectors – cylindrical parabolic collectors – Orientation and tracking – Performance Analysis.

**UNIT - II**

**DESIGN OF SOLAR WATER HEATING SYSTEM AND LAYOUT**

Power generation – solar central receiver system – Heliostats and Receiver – Heat transport system – solar distributed receiver system – Power cycles, working fluids and prime movers, concentration ratio.

**UNIT - III**

**THERMAL ENERGY STORAGE:** Introduction – Need for – Methods of sensible heat storage using solids and liquids – Packed bed storage – Latent heat storage – working principle – construction – application and limitations.

Other solar devices – stills, air heaters, dryers, Solar Ponds & Solar Refrigeration, active and passive heating systems.

**UNIT - IV**

**DIRECT ENERGY CONVERSION:** solid-state principles – semiconductors – solar cells – Solar cell energy conversion efficiency, I-V characteristics, effect of variation of solar insulation and temperature, losses. Semiconductor properties, energy levels, basic equations. Solar cell, p-n junction, structure. Solar PV power plants, performance – modular construction – applications, conversion efficiencies calculations.

**UNIT - V**

**ECONOMICS:** Principles of Economic Analysis – Increase in value creation, Funding and sponsoring facilities, International organizations, national possibilities, Incentives, subsidies and feed-in tariff, – Discounted cash flow – Solar system – life cycle costs – cost benefit analysis and optimization – cost based analysis of water heating and photo voltaic, Design of solar PV systems, applications, Present & future scenario for solar energy.

**MTE – 302 (C) Modelling and Analysis Of I.C. Engine**

**Unit 1**

**Basic simulation modeling :** Nature of simulation, so the system concept, system environment, continuous and discrete system , system modeling, Types of models like static physical, Dynamic physical and mathematical models, principle and in modeling block building relevance, accuracy and aggregation.

**Unit 2**

**Probability Concept In Simulation:** Stochastic variables, discrete and continuum probability function, Measures of probability function, Estimation of means variance, standard deviation.

**Unit 3**

**Actual cycles of Engine operation, their analysis, Use of combustion charts,** simulation of engine processes like, suction, compression, evaporation and exhaust. Basic engine operating cycles their analysis and simulation Development of computer programs for these.

**Unit 4**

**Modeling :** Modeling of Carburation and injection process and simulation of these process, development of simple programs for analysis. Results of simulation, simulation of engine trouble shooting.

**Unit 5**

**Fuels and Combustion :** Characteristics –Classification Handling and Storage –Flash and Fire Points.–Calorific Value Determination of CV by Bomb Calorimeter-Proximate and Ultimate Analysis Solid Fuels, Liquid ,Fuels, Gases.

**Reference Books:**

Minutes of Board of Studies Committee Meeting held on Dated 04.06.2019

The Board of Studies Committee Meeting was held in the Board Room at 2:30 PM, on 04.06.2019, Following members were present.

1. Mrs. Pritenka Jhuvar , Associate Prof. (Mechanical Engineering) Chairman
2. Dr. C. R. Solokar, Professor (Mechanical), Member
3. Mr. Sanjay Kaitaiya, Professor (Mechanical Engineering), Member
4. Mr. Anil Verma, Assistant Professor (Mechanical Engineering), Member
5. Mr. Dharmenjoy Yadav , Assistant Professor (Mechanical Engineering), Member
6. Mr. Sachin Bhatnagar, Assistant Professor (Mechanical Engineering), Member
7. Mr. Omshankar Jhariya, Assistant Professor (Mechanical Engineering), Member
8. Dr. A.C. Tiwari Professor RGPV Bhopal (External Member)
9. Dr. K.K. Agarwal Professor MANIT Bhopal (External Member)

The Chairman of Board of Studies Committee welcomes and appreciated the efforts put up by the faculty for progress of the department activities. The following Agenda point were discussed and resolved

**Agenda: Preparation of Syllabus and Scheme for 3rd semester (Thermal Engineering)**

Discussion Scheme and Syllabus

The **Internal members** of the Committee suggested that the Scheme and Syllabus should be prepared as per current demand in industry and academics.

Registrar

Sri Satya Sai University of Technology  
& Medical Sciences Sehore (M.P.)

The External members (Academic Expert) suggested for Computer Aided Design of Thermal System subjects should be added as an elective.

### Resolution of the Discussion

On the basis of discussion the following amendments were made:

Scheme and Syllabus was prepared as per current demand in industries.

The Computer Aided Design of Thermal System.. have been added as an elective Subject.

The chairman thanks the member for peaceful conduction of meeting.

### Signature of all members (Including Chairman)

1. Mrs. Priyanka Jhavar , Associate Prof. (Mechanical Engineering) Chairman 

2. Dr. G.R.Selokar, Professor (Mechanical), Member 

3. Mr. Sanjay Kalraiya, Professor (Mechanical Engineering), Member 

4. Mr. Anil Verma, Assistant Professor (Mechanical Engineering), Member 

5. Mr. Dhananjay Yadav , Assistant Professor (Mechanical Engineering), Member 

6. Mr. Sachin Dhanekar, Assistant Professor (Mechanical Engineering), Member 

7. Mr. Umashankar Jhariya, Assistant Professor (Mechanical Engineering), Member

8. Dr. A.C. Tiwari Professor RGPV Bhopal (External Member) 

9. Dr. K.R. Ahmadul Professor MANIT Bhopal (External Member)

**MTE-301(A) THERMAL POWER PLANT ENGG.**

**UNIT 1**

Conventional thermal power plants, super-critical power plants and its principles of working, performance curves and flow diagrams. Type of boiler Working and Principle

**UNIT 2**

Power plant components: Fuel and ash handling, pulverized fuel firing burners, dust handling, fluidized bed combustion. Radiant super heaters and re-heaters, economizer and pre-heaters, combustion and furnace design, boiler water supply and treatment. Draft and arrangement of draft fans, different types of cooling systems, open closed, mixed and dry cooling tower systems, air cooled condensers, Ejector and vacuum pumps, feed heating systems, heaters, evaporators and de-aerator, feed line protection, boiler feed pumps, different type of drives for it. steam turbine driven feed pumps.

**UNIT 3**

Plant instrumentation for thermal power plants, need and importance, distributed and centralized, pneumatic and electro-mechanical transducers and controllers, distributed computer control. Piping and insulation: design and layout of ducting for air fuel, gases and pulverized fuels, selection of piping, pipe flexibility analysis. Various control valves and actuators. Insulation optimum thickness and costs.

**UNIT 4**

Installation, commissioning and operation: Preliminary performance checks and acceptance test for various components, heat balance of items and entire plant. Starting loading and normal operation checks, maintenance logging, parallel operations, droop setting, performance analysis, maintenance, safety and pollution controls.

**UNIT 5**

Plant Management: Preparing specifications and contract documents, guarantee. Training of power plant personnel, safety, and seismic analysis. Purchase and contract for fuel supplies.

**MTE-301 (B) COMPUTATIONAL FLUID DYNAMICS**

**UNIT - I**

**INTRODUCTION:** Finite difference method, finite volume method, finite element method, governing equations and boundary conditions, Derivation of finite difference equations.

**Solution methods:** Solution methods of elliptical equations — finite difference formulations, iterative solution methods, direct method with Gaussian elimination. Parabolic equations-explicit schemes and Von Neumann stability analysis, implicit schemes, alternating direction implicit schemes, approximate factorization, fractional step methods, direct method with tridiagonal matrix algorithm.

**UNIT - II**

**Hyperbolic equations:** explicit schemes and Von Neumann stability analysis, implicit schemes, multi step methods, nonlinear problems, second order one-dimensional wave equations. Burgers equations: Explicit and implicit schemes, Runge-Kutta method.

**UNIT - III**

**FORMULATIONS OF INCOMPRESSIBLE VISCOUS FLOWS:** Formulations of incompressible viscous flows by finite difference methods, pressure correction methods, vortex methods.

**Treatment of compressible flows:** potential equation, Euler equations, Navier-stokes system of equations, flow field-dependent variation methods, boundary conditions, example problems.

**UNIT - IV**

**FINITE VOLUME METHOD:** Finite volume method via finite difference method, formulations for two and three-dimensional problems.

**UNIT - V**

**STANDARD VARIATIONAL METHODS:** Linear fluid flow problems, steady state problems. Transient problems.

**MID 301(A)**  
**Mechatronics and Flexible Manufacturing**

**Unit 1**

Defining mechatronics, its characteristics, scope and key issues, advantages and development of CNC horizontal and vertical machining centers, tool monitoring on CNC machines, differentiation between FMC, FMS and CIM, benefits of FMS and suitability to batch production.

**Unit 2**

Design of CNC machines, structure, guide-ways, feed drives, and spindle bearings, measurement and control systems, software and user interfaces, gauging and tool monitoring systems, assembly techniques for guide-ways, ball-screw and nut, spindle bearings, feedback elements and hydraulics.

**Unit 3**

Review of electrical and electronic devices; Drives, spindle and feed drives, servo principle, drive protection and optimization, selection criteria for drives, power supply, electrical cabinets and air cooling, electrical standards.

**Unit 4**

CNC systems, configuration of CNC systems, interfacing, monitoring and diagnostics, compensation for machine inaccuracies, machine data, Programmable Logic Controllers (PLC), Direct Numerical Control (DNC); testing of CNC machine tools, verification of technical specifications and functional aspects, idle running tests, machine tool and work-piece accuracies, metal removal capability and safety aspects.

**Unit 5**

Programming and operations of CNC machines, part programming, coordinate system, dimensioning, axes and motion nomenclature, structure of part programs, G02/ G03 circular interpolation, tool compensation, subroutines/ macro, canned cycles (G81/ G88), mirror imaging, parametric programming and R-parameters, constant speed and constant cutting speed (G97/ G96), machining cycles, examples of machine center programming, case studies.

**PRODUCT ANALYSIS AND COST OPTIMIZATION**

**UNIT 1**

**Introduction:** New products, new product strategy -market definition Idea generation introduction to the design process -forecasting sales potential -product engineering and markets/monopoly competitive.

**UNIT 2**

**Manufacturing Planning:** Selection of optimum process, standardization, Break even analysis application and area of use -problems -multi - product analysis.

**UNIT 3**

**Value Analysis:** Steps in selection, analysis and implementation, Selection of cutting speed for optimum cost -problems.

**Cost Accounting:** Cost estimation -difference -types -steps involved in cost estimation.

**Types of Cost:** Cost Centres, Direct -indirect, material cost -direct indirect material cost Overhead cost, Elements in overheads: Preparation of cost sheet, machine hour rate, apportioning methods.

**UNIT 4**

**Variance Analysis** - Labour variance, Material variance and Overhead variance, Activity based costing - Introduction to target costing.

**Cost Calculation:** Cost calculation for machined components, welding, casting and forged components illustrations -calculation of sales cost.

**UNIT 5**

**Cost Optimization Techniques:** Analytical, Graphical and incremental methods Learning curves.

MID – 302 (C)  
COMPOSITE MATERIALS

UNIT – I

**INTRODUCTION:** Definition – Classification and characteristics of Composite materials. Advantages and application of composites. Functional requirements of reinforcement and matrix. Effect of reinforcement (size, shape, distribution, volume fraction) on overall composite performance.

UNIT – II

**REINFORCEMENTS:** Preparation-layup, curing, properties and applications of glass fibers, carbon fibers, Kevlar fibers and Baron fibers. Properties and applications of whiskers, particle reinforcements. Mechanical Behavior of composites: Rule of mixtures, Inverse rule of mixtures. Isostrain and Isostress conditions.

UNIT – III

**Manufacturing of Metal Matrix Composites:** Casting – Solid State diffusion technique, Cladding – Hot isostatic pressing. Properties and applications. **Manufacturing of Ceramic Matrix Composites:** Liquid Metal Infiltration – Liquid phase sintering. **Manufacturing of Carbon – Carbon composites:** Knitting, Braiding, Weaving. Properties and applications.

UNIT – IV

**Manufacturing of Polymer Matrix Composites:** Preparation of Moulding compounds and prepregs – hand layup method – Autoclave method – Filament winding method – Compression moulding – Reaction Injection moulding. Properties and applications.

UNIT – V

**Strength:** Laminar Failure Criteria-strength ratio, maximum stress criteria, maximum strain criteria, interacting failure criteria, hydrothermal failure. Laminate first ply failure-Insight strength; Laminate strength-ply discount truncated maximum strain criterion; strength design using caplet plots, stress concentrations

Minutes of Board of Studies Committee Meeting held on Dated 04.06.2019

The Board of Studies Committee Meeting was held in the Board Room at 2:30 PM. on **04.06.2019**,  
Following members were present:

1. Mrs. Priyanka Jhaver, Associate Prof. (Mechanical Engineering) Chairman
2. Dr. A.R. Selokar, Professor (Mechanical). Member
3. Mr. Sanjay Kairaiya, Professor (Mechanical Engineering), Member
4. Mr. Anil Verma, Assistant Professor (Mechanical Engineering), Member
5. Mr. Dharamraj Yadav, Assistant Professor (Mechanical Engineering), Member
6. Mr. Sachin Bhatnagar, Assistant Professor (Mechanical Engineering), Member
7. Mr. Gonsalves Jhariya, Assistant Professor (Mechanical Engineering), Member
8. Dr. A.C. Tiwari Professor RGPV Bhopal (External Member)
9. Dr. K.K. Alarwal Professor MANIT Bhopal (External Member)

The Chairman of Board of Studies Committee welcomes and appreciated the efforts put up by the faculty for progress of the department activities. The following Agenda point were discussed and resolved

**Agenda: Preparation of Syllabus and Scheme for 3rd semester ( Industrial Design)**

Discussion Scheme and Syllabus

The Internal members of the Committee suggested that the Scheme and Syllabus should be prepared as per current demand in industry and academics.

  
Registrar  
Sri Satya Sai University of Technology and Medical Sciences  
Sehore (M.P.)

The External members (Academic Expert) suggested for I) Research Methodology , II) Computational Methods subjects should be added as an elective.

### Resolution of the Discussion

On the basis of discussion the following amendments were made:

Scheme and Syllabus was prepared as per current demand in industries.

The for I) Research Methodology, II) Computational Methods.. have been added as an elective Subject.

The chairman thanks the member for peaceful conduction of meeting.

### Signature of All members (Including Chairman)

1. Mrs. Priyanka Jhavar , Associate Prof. (Mechanical Engineering) Chairman 

2. Dr. G.R. Selokar, Professor (Mechanical), Member 

3. Mr. Sanjay Kalraiya, Professor (Mechanical Engineering), Member 

4. Mr. Anil Verma, Assistant Professor (Mechanical Engineering), Member 

5. Mr. Dhannajoy Yadav , Assistant Professor (Mechanical Engineering), Member 

6. Mr. Sachin Karaskar, Assistant Professor (Mechanical Engineering), Member 

7. Mr. Omshankar Jhariya, Assistant Professor (Mechanical Engineering), Member

8. Dr. A.C. Tiwari Professor RGPV Bhopal (External Member) 

9. Dr. K.R. Aharwal Professor MANIT Bhopal (External Member) 

  
Chairman

  
Registrar  
Sri Saha Sai University of Technology  
& Medical Sciences Solapur (M.S.)

**Scheme of Examination**

**Third Semester –Master of Technology (Industrial Design)**

S.No.	Subject Code	Subject Name	Periods per week			Credits	Maximum marks (Theory Slot)			Maximum Marks (Practical Slot)		Total Marks
			L	T	P		End Sem. Exam	Tests (Two)	Assignments/Quiz	End Sem. Practical / Viva	Practical Record/Assignment/Quiz/Pre-sentation	
1.	MID-301	Elective -I	3	1	-	4	70	20	10	-	-	100
2.	MID-302	Elective -II	3	1	-	4	70	20	10	-	-	100
3.	MID-303	Thesis phase-1			8	8				120	80	200
4.	MID-304	Seminar			4	4				-	100	100
		Total	6	2	12	20	140	40	20	120	180	500

**Elective –I**

- MID-301 (A) Mechatronics and Flexible Manufacturing
- MID-301 (B) Automation In Manufacturing
- MID-301 (C) Product Data Management
- MID-301 (D) Research Methodology

**Elective –II**

- MID-302 (A) Industrial Robotics
- MID-302 (B) Product Analysis And Cost Optimization
- MID-302 (C) Composite Materials
- MID-302 (D) Computational Methods

L: Lecture-

T: Tutorial- P: Practical

w.e.f July 2019

**MID 301(A)**

**Mechatronics and Flexible Manufacturing**

**Unit 1**

Defining mechatronics, its characteristics, scope and key issues, advantages and development of CNC horizontal and vertical machining centers, tool monitoring on CNC machines, differentiation between FMC, FMS and CIM, benefits of FMS and suitability to batch production.

**Unit 2**

Design of CNC machines, structure, guide-ways, feed drives, and spindle bearings, measurement and control systems, software and user interfaces, gauging and tool monitoring systems, assembly techniques for guide-ways, ball-screw and nut, spindle bearings, feedback elements and hydraulics.

**Unit 3**

Review of electrical and electronic devices; Drives, spindle and feed drives, servo principle, drive protection and optimization, selection criteria for drives, power supply, electrical cabinets and air cooling, electrical standards.

**Unit 4**

CNC systems, configuration of CNC systems, interfacing, monitoring and diagnostics, compensation for machine inaccuracies, machine data, Programmable Logic Controllers (PLC), Direct Numerical Control (DNC); testing of CNC machine tools, verification of technical specifications and functional aspects, Idle running tests, machine tool and work-piece accuracies, metal removal capability and safety aspects.

**Unit 5**

Programming and operations of CNC machines, part programming, coordinate system, dimensioning, axes and motion nomenclature, structure of part programs, G02/ G03 circular interpolation, tool compensation, subroutines/ macro, canned cycles (G81/ G89), mirror imaging, parametric programming and R-parameters, constant speed and constant cutting speed (G97- G96), machining cycles, examples of machine center programming, case studies.

**MID-301(B)**

**Automation In Manufacturing**

**UNIT-I**

**Introduction to Automation:** Automation in Production Systems-Automated Manufacturing Systems, Computerized Manufacturing Support Systems, Reasons for Automation, Automation Principles and Strategies, Manufacturing operations, Production Concepts and Mathematical Models, Costs of Manufacturing Operations, , Basic Elements of an Automated Systems, Advanced Automation Functions, Levels of automation

**UNIT-II**

**Introduction to Material Handling:** Overview of Material Handling Equipment, Considerations in Material Handling System Design, The 10 Principles of Material Handling, Material Transport Systems, Automated Guided Vehicle Systems, Monorails and other Rail Guided Vehicles, Conveyor Systems, Analysis of Material Transport Systems, Storage Systems, Storage System Performance, Storage Location Strategies, Conventional Storage Methods and Equipment, Automated Storage Systems, Engineering Analysis of Storage Systems, Automatic data capture-overview of Automatic identification methods, bar code technology, other ADC technologies.

**UNIT-III**

**Manual Assembly Lines :** - Fundamentals of Manual Assembly Lines, Alternative Assembly Systems, Design for Assembly, Analysis of Single Model Assembly Lines, Line balancing problem, largest candidate rule, Kilbridge and Wester method, and Ranked Positional Weights Method, Mixed Model Assembly Lines, Considerations in assembly line design.

**UNIT-IV**

**Transfer lines :** Fundamentals of Automated Production Lines, Storage Buffers, and Applications of Automated Production Lines, Analysis of Transfer Lines with no Internal Storage, Analysis of Transfer Lines with Storage Buffers.

**UNIT-V**

**Automated Assembly Systems :** Fundamentals of Automated Assembly Systems, Design for Automated Assembly, and Quantitative Analysis of Assembly Systems - Parts Delivery System at Work Stations, Multi- Station Assembly Machines, Single Station Assembly Machines , Partial Automation.

**Text Books:**

1. Automation, Production systems and computer integrated manufacturing, Mikel P. Groover/ Pearson Education.

**MEU -301(C)**

**Product Data Management**

**UNIT 1**

Centralized Systems, Client Server Systems, Parallel Systems, Distributed Systems, Network Types, Parallel Database, Distributed Database, Security and Integrity, Standardization plans, Product Data Management - Product life cycle, Complexity in Product Development, General Description of PDM

**UNIT 2**

Basic functionality of PDM: Information architecture, PDM System architecture, Applications used in PDM systems, Trends in PDM

**UNIT 3**

Document Management Systems: Document management and PDM, Document life cycle, Content Management, Document management and related technologies, Document management resources on the Internet.

**UNIT 4**

Workflow Management in PDM: Structure Management, Engineering Change Management, Release Management, Version Management, Configuration Management **Creating Product Structures** Part centric approach, CAD centric approach, Product Structure configuration, **Managing Product Structures** PDM Tools: Matrix One, TeamCenter, Windchill, Enovia, PDM resources on the Internet.

**UNIT 5**

PDM implementation Case Studies: Sun Microsystems, Inc., Mentor Graphics Corporation, Ericsson Radio Systems AB, Ericsson Mobile Communications AB, ABB Automation Technology Products, SaabTech Electronics AB

**Research Methodology**

**Unit 1.**

Research Meaning, Objective, Motivation, Types of Research, Research Approach, Research and Scientific Methods, Identification of Problem, Significance of Defining Research Problem, Research Design, Research Ethics

**Unit 2.**

Data Collection Methods, Primary Data, Secondary Data, Questionnaire Preparation, Case Study Method, Measurement Scales, Levels of measurement – Nominal, Ordinal, Interval, Ratio Measures of Central Tendency (Mean, median, Mode), Measures of Dispersion (range, mean deviation, standard deviation), Graphical Representation of Data, Tabular Presentation of Data, Oral Presentation, Posters Presentation

**Unit 3**

Sampling Design, Sample Size, Non Response, Characteristics of a good sample, Probability Sample – Simple Random Sample, Systematic Sample, Stratified Random Sample & Multi-stage sampling, Determining size of the sample, Research Question, Normal Probability Curve, Standard Error, Confidence Intervals

**Unit 4.**

Significance of correlation, Pearson's Product Moments Correlation, Regression and Multiple Regression equations, Hypothesis Formation, Hypothesis Testing, Testing the Significance of difference between means (z and t test), Analysis of Variance (ANOVA) -concept and applications, Chi Square Test steps, Type I and Type II errors.

**Unit 5.**

Writing Research Reports, interpretation, Significance of Report Writing, Steps In Writing Report, Types of Report, Technical Report Writing, Review of Related Literature, Structure of The Research Report, Precautions In Writing Report, Layout of Research Paper, Format and Style, Impact Factor of Journals, Suitability of Journal for Publication, Plagiarism, Citation, Reference Writing, IPR, Copyright, Patents,

**MID-302(A)  
Industrial Robotics**

**UNIT: I**

**Introduction:** Automation and Robotics, Robot anatomy, robot configuration, motions joint notation, work volume, robot drive system, control system and dynamic performance, precision of movement. **Control System And Components:** basic concept and modes controllers control system analysis, robot activation and feedback components. **Position sensors,** velocity sensors, **actuators sensors,** power transmission system.

**UNIT: II**

**Motion Analysis And Control:** Manipulator kinematics, position representation forward transformation, homogeneous transformation, manipulator path control, robot dynamics, configuration of robot controller.

**UNIT: III**

**End Effectors:** Grippers-types, operation, mechanism, force analysis, tools as end effectors considerations in gripper selection and design. **SENSORS:** Desirable features, tactile, proximity and range sensors, touch sensors in robotics. **MACHINE VISION:** Functions, Sensing and Digitizing-imaging. Devices. Lighting techniques. Analog to digital single conversion. image storage, Image processing and Analysis-image data reduction, Segmentation feature extraction. Object recognition, training the vision system, Robotics application.

**UNIT: IV**

**ROBOT PROGRAMMING:** Lead through programming, Robot programming as a path in space. Motion Manipulation, WAIT, SINONAL AND DELAY commands, Branching capabilities and Limitations. **ROBOT LANGUAGES:** Textual robot Languages, Generation, Robot language structures. Elements in function.

**UNIT: V**

**ROBOT CELL DESIGN AND CONTROL:** Robot cell layouts-Robot centered cell, In-line robot cell. Considerations in work design, Work and control, Inter locks, Error detect ion, Work cel l controller. **ROBOT APPLICATION:** Material transfer, Machine loading/unloading. Processing operations. Assembly and Inspection, Feature Application.

**Text Books:**

1. Industrial Robotics: Mikell P. Groover/McGraw Hill.
2. Robotics, R. M. Fu / McGraw Hill.

**MID 302 (B)**

**Product Analysis And Cost Optimization**

**UNIT 1**

**Introduction:** New products, new product strategy -market definition Idea generation introduction to the design process -forecasting sales potential -product engineering and marketsmonopoly competition.

**UNIT 2**

**Manufacturing Planning:** Selection of optimum process, standardization. Break even analysis,application and area of use -problems -multi - product analysis.

**UNIT 3**

**Value Analysis:** Steps in selection, analysis and implementation, Selection of cutting speed for optimum cost -problems.

**Cost Accounting:** Cost estimation -difference -types -steps involved in cost estimation.

**Types of Cost:** Cost Centres, Direct -indirect, material cost -direct indirect material cost Overhead cost, Elements in overheads: Preparation of cost sheet, machine hour rate, apportioning methods.

**UNIT 4**

**Variance Analysis -** Labour variance, Material variance and Overhead variance, Activity based costing - Introduction to target costing.

**Cost Calculation:** Cost calculation for machined components, welding, casting and forged components. Illustrations -calculation of sales cost.

**UNIT 5**

**Cost Optimization Techniques:** Analytical, Graphical and incremental methods Learning curves.

**MID – 302 (D)  
Computational Methods**

**UNIT -I**

Introduction- Historical background, basic concept of the finite element method, comparison with finite difference method.

**UNIT -II**

Variational methods; calculus of variation, the Rayleigh-Ritz and Galerkin methods; Finite element analysis of 1-D problems: formulation by different approaches (direct, potential energy and Galerkin); Derivation of elemental equations and their assembly, solution and its post-processing. Applications in heat transfer, fluid mechanics and solid mechanics. Bending of beams, analysis of truss and frame.

**UNIT -III**

Finite element analysis of 2-D problems: finite element modelling of single variable problems, triangular and rectangular elements; Applications in heat transfer, fluid mechanics and solid mechanics.

**UNIT -IV**

Numerical considerations: numerical integration, error analysis, mesh refinement. Plane stress and plane strain problems; Bending of plates; Eigen value and time dependent problems.

**UNIT -V**

Discussion about preprocessors, postprocessors and finite element packages namely ANSYS, ABAQUS, IES Dyaan, Simufact.
